A congregation of some seventy or eighty well-dressed people, chiefly ladies, assembled last night in spite of the boisterous climatic conditions. A simple but impressive service of an hour's duration, conducted by Lady Victoria Murray, was noteworthy by reason of the stories of cures advanced. The first lady to rise related how her married sister in New York adopted a little crippled foundling, who was born blind. The doctors said she would never see or walk, but coming under the influence of Christian Science doctrines, the child could now see quite plainly and run about like other children.

A self-confessed business woman followed. Where there had previously been discord, she said, now good-will and peace prevailed. Then came grateful parents, who told how children had been cured, one of hemorrhage and another of scarlet fever, without the aid of material agencies. A tall lady in black, wearing glasses, who for glandular swellings had taken tonics and strengthening medicines and mineral waters all to no purpose, attributed the disappearance of this disaffection to the simple treatment they had met there to extol; while an elderly man in front rose to say that it had changed his whole life, adding that "joy was the keystone of Christian Science teaching."

A smartly attired gentleman bore testimony to the wonderful change effected in his little girl of five. A victim of catarrh and hay fever, with asthma supervening, the doctor said she would not live unless taken for a voyage to Egypt. On returning, the child had a worse attack than ever, but the treatment advocated by Mrs. Eddy was tried in her case, and now the girl was as strong and healthy as other children.

The service over, a male member of the congregation, with whom a *Dispatch* representative chatted, proudly announced that for three and a half years he had never tasted medicine, and had quite lost the craving for alcoholic liquors. It was an experience—this experience meeting.—*Manchester (Eng.) Dispatch*.

The Christian Science Society of Harvard University.

Acting upon the privilege given by the by-law which appeared in the *Sentinel* of March 12, 1904, the Christian Science Society of Harvard University has been organized. The second clause of the constitution which the Society adopted, reads, "The purposes of this organization are: (1) To unite the Christian Scientists within the University in closer bonds of Christian fellowship; (2) To welcome Christian Scientists entering the University; and (3) To afford to those so desiring, opportunities to learn the truth about Christian Science as taught in the Bible and in 'Science and Health with Key to the Scriptures' by Mary Baker G. Eddy, the Discoverer and Founder of Christian Science."

The Society undertook as its first work to supply the University Library with copies of our Leader's works not already found therein, and to have them all properly listed under the author's name, and thus made readily accessible to readers. A copy of "Pulpit and Press" has been presented, and also a copy of the three hundred and ninth edition of *Science and Health*, to supply the need of a late,

revised copy of the text-book. It was found that several of Mrs. Eddy's lesser works, presented to the library some years ago by a graduate member, had never been entered under her name in the catalogue of authors, but had been stored away as "unlisted pamphlets." The Society has now supplied a complete list of these books and pamphlets, including the last three messages to The Mother Church, and with the permission of the librarian, Mr. W. C. Lane, has had them bound together in three volumes, in brown half-levant. In this form they will be listed, and then all of Mrs. Eddy's works that are named on the cover page of the *Sentinel*, with the exception of "Feed My Sheep" and "Christ and Christmas," will be in the library and accessible to the students. The Society has renewed the library subscription to the *Sentinel* and placed a copy in the Harvard Union, and has also presented a year's subscription to the *Sentinel* and *Journal* and a copy of *Science and Health* to Phillips Brooks House.

Rev. Francis G. Peabody, Dean of the Divinity School, promptly and kindly granted the Society's request (made last February) for permission to meet in Phillips Brooks House, and the first meeting of the Society of a religious nature was held there on March 9.

At a previous business meeting, it was decided to open this first religious meeting only to members and invited student or graduate guests, and to invite some prominent Scientist to give an informal talk or read a paper. Then, prompted by a desire to do nothing but what could be done with safety to the Cause in all colleges and universities, the members unanimously agreed that the Society should invite no one to address an audience, even in an informal way, on Christian Science, except the members of the official Board of Lectureship. The twenty-one who were present at the meeting of March 9, heard with deep interest a scholarly address by Rev. William P. McKenzie.

We are deeply grateful to our Leader for the by-law under which our Society was formed; for it has enlarged our opportunities to open the way for others to enjoy the blessings that Christian Science has brought into all our lives.—J. E. SEDMAN, *Secretary-Treasurer*.

The Work in Los Angeles, Cal.

From the secretary's annual report of the reading room of Second Church of Christ, Scientist, we note that the sales at the reading room for the year ending December 31, 1904, amounted to \$5,062.99; sales at church, \$1,181.65; subscriptions taken, \$470.50; total \$6,744.54. Total number of copies of *Science and Health* sold, 821; sales for 1903 amounted to \$6,000.30; sales for 1902 amounted to \$3,773.36; sales for 1901 amounted to \$2,406.69. The number of visitors who frequent the reading rooms, and the increasing amount of work has made it necessary to again secure more commodious quarters, and they are now occupying adequate rooms in one of the best buildings in the city.

Church Organized in Pittsfield, Mass.

Official announcement is made of the organization in this city of a Christian Science church. The movement has assumed sizable proportions in Pittsfield, and a great many very earnest people are identified with it. There will be much interest in the new organization and every one will wish it Godspeed.

Mr. and Mrs. Archie E. Van Ostrand have been elected First and Second Readers.

Berkshire County (Mass.) Eagle.

A Critic Answered.

A reprint of Mr. Alfred Farlow's article in the June *Journal* is now on sale. Price 3 cents per copy, or 100 copies for \$2.50. Address orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

The Lectures.

Florence, Col.

Union Hall was well filled yesterday afternoon [March 12] to listen to Judge Septimus J. Hanna's talk on Christian Science. Judge Hanna was introduced by Rev. Ward Russell, pastor of the Christian Church of this city, who said in part,—

We have met to-day to hear expounded the principles advocated by Judge Hanna and his co-laborers of the Christian Science faith. We have come as seekers after truth. If the speaker has any new truth to give us, we want to hear it. The honest man is not afraid to hear the truth. Only the moral coward, the stickler for party rather than liberty, flees from the light of truth. The Master said, "Ye shall know the truth, and the truth shall make you free." I want to be free; I want the truth, and if the Christian Science people have a ray of light that has not come to me, I want it. I am living for time and eternity, and can't afford to live in blindness if some one can take the scales from my eyes. Let us give Christian Science a fair hearing. Let us learn what it is, and weigh it in the balance of revealed truth as laid down in the Holy Scriptures. If it comes up to the requirements of all the Word of God, let us accept it as worthy; but if it be found wanting, let us honorably and conscientiously reject it. Give everything a fair examination, not hasty, but careful, and do not condemn it because it is new, nor cling to it because it is old.

I believe the day is coming when we shall welcome what is good and true from all sources, and become one great, truth-loving, united body in the Lord. I believe the backbone of creedism has been broken. The day of liberty and union in Christ draweth nigh. What quota of truth the Church of Christ, Scientist, shall contribute to this great "one faith," we shall see by and by. No doubt this body of people are calling the attention of the world to some things that have been overlooked. Let us hear them.

The Tribune.

Minneapolis, Minn.

An audience of more than two thousand persons gathered at the Metropolitan Opera House yesterday [March 19] to hear the address of Miss Mary Brookins on Christian Science. Several hundred, whom it was impossible to seat, were turned away. The lecture was given under the auspices of First Church of Christ, Scientist. From first to last Miss Brookins held the close attention of that vast audience. The speaker was introduced by Weed Munro, who said in part,—

The privilege of introducing the speaker of the day is granted to one who is not a Christian Scientist, to one who has studied the subject without avail, to whom the refulgence of a revealed light has been denied, but who stands aside and watches the development of the denomination with joy and pardonable envy.

The marvelous growth of the Christian Science Church and the unswerving loyalty of its members, is conclusive evidence of the justness and solidity of its foundation. Truth and love seem to be its base, and sweet repose, cheerfulness, unfailing happiness, peace, and fearlessness its superstructure.

To the uninitiated who is just, careful watchfulness discloses that Christian Science accepts and follows the teachings of Christ, unburdened by and shorn of doctrines—the teachings of him, to whom alone is due the Christian significance of such words as charity, humility, and humanity; whose one great message was love and the power of whose influence was due to his absolute sinlessness.

The Minneapolis Journal.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Amended By-law.

ARTICLE XXVIII. THE MOTHER CHURCH AND BRANCH CHURCHES.

LOCAL SELF-GOVERNMENT.—SECTION I. The First Church of Christ, Scientist, in Boston, Mass., shall assume no general official control of other churches of this denomination; and it shall be officially controlled by no other church. This is the denominational rule of Christian Science. Each Church of Christ, Scientist, shall have its own form of government. No conference of churches shall be held, except the annual conference at The Mother Church in Boston; unless it be when our churches located in the same State convene in unity and love, to confer on a statute of said State abrogating individual rights, or attempting class legislation.

Whose Diagnosis?

A CLERGYMAN who recently attacked Christian Science, asks, "Now, whose diagnosis declared these ailments to be such diseases? [Cancer, locomotor ataxia, tuberculosis, paralysis, etc.] The healer's, of course; and nine tenths of them—yes, ninety-nine hundredths of them know as little of the nature of disease as a mole knows of the solar system. . . . Think of Miss —, a splendid girl, averring that she had healed a person of cancer, or tuberculosis, etc. What does she know about such diseases to diagnose and pronounce on their nature and names? And yet she will do as well as nine tenths of her fellow-healers. Is it on such testimony that you ask me to put confidence in Christian Science healings?"

The nature of this critic's question proves the superficial character of his investigation of the subject, but in that regard he does not differ from many other critics. In the cases reported in our periodicals the diagnoses are almost invariably those of physicians,—in many instances several physicians have been called in,—and to doubt their correctness is to doubt the intelligence and learning of the medical profession rather than to impeach the testimony of Christian Scientists.

An examination of the testimonies published in the issue of *The Christian Science Journal* from which we have taken the above criticism, shows that in almost every case reported, one or more physicians had treated the patient before Christian Science was resorted to. In one case the patient had been a hopeless invalid for seven years, and in that time had "passed through the hands of no less than sixteen different doctors," a number of whom had agreed that a certain dangerous operation was necessary. In another case, the eminent surgeon who diagnosed the disease pronounced it cancer, and said to the patient, "Get into a hospital within forty-eight hours: remember that every twenty-four is an added danger. If you survive the double operation, the X-rays will finish the cure of the more recent development, but there will be a recurrence of the other within two months, when a second operation will be necessary, and if you survive this, it may prolong your life a few years."

Still another case is that of a boy who was stricken with

paralysis and who was treated by several physicians, one of whom told the boy's parents that his time was short, and that they "must prepare for the worst." There is also the testimony of a woman who was persuaded to try Christian Science while she "was lying in a hospital, waiting to undergo an operation for a trouble of six years' standing."

If the physician's diagnosis in a case afterwards healed by Christian Science treatment is to be questioned, why not question the diagnosis in every case? If the physicians' diagnoses were wrong in these particular cases, how shall we know when any diagnosis is right; and what of the grave responsibility assumed by the physicians who have prescribed serious, and perhaps dangerous, surgical operations in so many of these cases?

In all these instances, Christian Scientists do not claim to have been healed of diseases which either they themselves or the practitioner had diagnosed as cancer, locomotor ataxia, tuberculosis, paralysis, etc., but they do testify that through Christian Science treatment they have been healed of distressing conditions which physicians of standing in their profession had previously declared to be these diseases.

ARCHIBALD McLELLAN.

Apropos of Easter.

IN contrast with much religious thought of the past, which, through false veneration, has come under the bondage of superstition, mortal sense is now swinging to the opposite extreme of irreverent questioning, and to-day there are those who in all soberness deny the possibility of phenomena of our Saviour's life in which the faith of Christianity has always been centered. German scholarship has supplied a number of the more ultra "higher-critics," and one of them, Professor Gunkel, has recently issued a volume on New Testament interpretation in which he dares to aver that the belief in the resurrection of Jesus is nothing more nor less than an outgrowth of mythology! He says,—

"The idea of resurrection is intimately interwoven with that of ascension, and is the counterpart of the belief in a descent into hell. Faith in the death and resurrection of the gods was an important part of the mythology of the Orient. . . . The idea of a resurrection of the gods was no doubt originally suggested by nature. The divinities of the sun and of vegetation seemed to die in the winter and come to life again in the spring. Moreover, the *form* in which the belief in resurrection appears in early Christianity is identical with that found in the Gentile nations, notwithstanding the difference in content. . . .

"The day of the resurrection, too, can easily be explained along the same lines. The sacred Lord's Day, on which the sun comes forth from its winter night, can be identified only with the old Oriental day of resurrection, and must certainly have been borrowed from the Oriental tradition."

The resurrection of Jesus is the bulwark of Christianity, and Professor Gunkel's startling statement will seem to very many to be altogether subversive of evangelical faith. It is destined, therefore, to evoke a vigorous protest of denial; but those who undertake to answer it will do well to remember that when the grounds of the general belief in the resurrection are subjected to careful consideration, their insufficiency, apart from the present demonstration of man's spiritual authority over material law, becomes very apparent. He who denies the possibility of overcoming the beginnings of death to-day, through spiritual means, but who nevertheless undertakes to prove that Jesus overcame death by this means, is likely to find himself impaled upon the shafts of his own logic.

In olden times, opposing armies sometimes agreed to settle their contentions by pitting two representative warriors, one from either side, against each other, which two fought it out to a finish. In a kindred way, the forces of good and of evil which seem to be at war upon the human

plane, may be said to have been headed up at Calvary, and the resurrection of Jesus as the champion of the Israel of God, to have settled forever the supremacy of good over evil. Disprove his resurrection, and Christianity is shorn of its one positive and unquestionable evidence of man's continuity of life. The maintenance of the historic truth of this event becomes, therefore, of vital interest. So significant is the assurance of humanity's success in the struggle with death, that it was not left to the uncertain keeping of tradition or unverifiable historic record. For man's present and continuous knowing, this assurance is wrought into, and made the essential fruitage of every believer's experience. Every existing scrap of testimony respecting the resurrection was written some hundreds of years after the asserted date of its occurrence, and has been subject to all the incidental mistakes of copyists, the enlargements of annotators, etc., and when we further remember that the possibility of such an event is absolutely denied by so-called material law, and is entirely unknown to present human experience, we can understand something of the vulnerability of the argument of that would-be apologist who undertakes to disprove this critic's contention while denying that sickness and disease, the beginnings of death, have been, or can be, overcome to-day through the indwelling of that sovereign Mind that was in Christ Jesus.

To those who knew that Jesus healed the sick and raised up the dying, his own resurrection could not have seemed strange, and to those who to-day are effecting or witnessing these demonstrations of the might of spiritual truth,—who have come to know, through Christian Science, the nothingness of all that makes for death in human thought and experience, and who therefore can accept Paul's assurance that this last enemy shall also be overcome, as demonstrably true,—to these the doctrine of the resurrection presents no difficulties, and their sufficient answer to its critics is expressed in the doing of the healing work which Jesus enjoined.

Spiritual demonstration over the conditions that anticipate death shift consideration from the question as to whether the testimony of the apostolic writers is reliable, to the question as to whether Jesus was familiar with that law of Life which is capable of present demonstration. The availability of this law of Life can suffer no possible limitation save that of an imperfect apprehension, and the spiritual wisdom of Jesus, so unhesitatingly recognized in all the world, leaves not a vestige of ground for doubt as to his command of that saving truth which, as revealed in Christian Science, is again bringing an Easter joy to the sick and dying in all lands.

The assertion and demonstration, through Christian Science, of the present sovereignty of Life, Truth, and Love over sin, sickness, and death, not only satisfies "the longing soul, . . . such as sit in darkness and in the shadow of death, being bound in afflictions," but it answers the otherwise unanswerable, and lifts humanity to that plane of unquestioning faith on which Paul could exultingly say, "Now is Christ risen from the dead, and become the first fruits of them that slept."

JOHN B. WILLIS.

Wise and Helpful Testimony.

THE Psalmist's query, "What shall I render unto the Lord for all his benefits toward me?" describes the grateful upspringing of that newly awakened sense which comes to those who have been healed in Christian Science; and his answer, "I will offer to thee the sacrifice of thanksgiving: . . . I will pay my vows unto the Lord now in the presence of all his people," tells *how* this thankfulness may be expressed. Never before in any religious services has this form of worship been given the prominence it has in Christian Science. At the Wednesday meeting those who have been healed come to a reciprocal service, where they not only

receive new blessings, but have also an opportunity to prove the truth of the Master's saying, "It is more blessed to give than to receive."

There are, however, some who fail to respond to the loving invitation to tell what God hath wrought for them, and among other reasons assigned for their remissness, is a fear lest a recital of past ills may tend to bring them back. It would seem that all earnest students of our textbook should be able to discriminate between the idle rehearsal of mortal experiences which tell of sin and sickness, and the declarations of Truth's all-power which has been revealed in the destruction of these evils. In Christian Science we learn that evil is unreal because it is not of God, and we are healed of both sin and sickness by the understanding of their unreality. For this reason we do not talk of evil, nor even think of it, if we are wise. Our testimonies are, however, addressed in part to the thought which has not proved the healing power of Truth, and to be intelligible to this thought, the ordinary terms of expression must be used, but it is never necessary to allow the impression of evil to predominate. Occasionally a testimony is given with such a detailed account of past suffering that the story of the divine deliverance is crowded into a few words, and a sensitive thought, whether that of speaker or listener, may be temporarily disturbed thereby, as when one awakens from a distressing dream. This result can never follow, however, where the consciousness of the omnipotence of Truth and Love is realized and expressed.

In giving testimony we should never be indefinite or halting in our statements, for we are sounding the high praises of Him who called us out of darkness into His marvelous light, we are breaking the living bread to the hungry, some of whom may have come to our service wondering whether any of us have been healed of sickness or sorrow as distressing as theirs seems to them. Let us tell them, in words they cannot mistake, how great has been our deliverance, how we are being delivered now, every day, and we have our Leader's assurance (Science and Health, p. 570) that when we give a cup of cold water in Christ's name, we need not fear the consequences.

If our words are born of the inspiration of divine Love, they will, like mercy, drop "as the gentle rain from heaven" upon some sufferer's fevered sense, and be "twice blessed" in blessing him that speaks and him that listens, so potent is the Word of Life. Every testimony which is given worthily,—scientifically,—replaces just so much erroneous belief with the consciousness of truth; and the Word spoken will, according to promise, "give seed to the sower and bread to the eater."

ANNIE M. KNOTT.

Letters to our Leader.

New York, N. Y., April 6, 1905.

Beloved Teacher and Leader:—Though I do not see the dear face or hear the voice I love, as once I did, I know it is mine to prove my gratitude for blessings divinely bestowed. Healed through reading Science and Health, after many years of invalidism, lifted out of many a dark cloud to see the light again,—I owe you love and gratitude beyond words to express. I am sending you a little article to show you that divine Love still speaks to me through your love, and my heart does respond to the still, small voice in the way of His appointing, sometimes in the sunshine, sometimes in the shadow, but always I love and honor my grand Leader! I am more and more impressed with the fact that nothing but "individualized infinite power" could have made me stand, and continue to stand. God is with thee, now and ever. With loving gratitude for the blessing I have so richly received, I am ever

Your loving student,

EFFIE ANDREWS.

Chicago, March 16, 1905.

Beloved Leader:—Your message, "Prevention and Cure for Divorce," gave me such thankfulness that the time has come when Divine Science may be declared to the world in its purity. All of your followers who watch and wait for the appearing of the bridegroom, so that they may go in to the marriage, rejoice in this evidence that they who worship the Father "must worship him in spirit and in truth." I, myself, have taken up the battle with the world, the flesh, and the devil, with renewed vigor, perseverance, and confidence. I begin to appreciate your life of separation from all human ties, that you might bless those who are of the "lost sheep of the house of Israel."

With gratitude and love, I am your follower.

MARIE PRENTISS.

Minneapolis, Minn., February 2, 1905.

Beloved Leader:—We, the members of Second Church of Minneapolis, in annual meeting assembled, with arms full of fruit, and in happy thanks to God,—pause, to share with you our harvest song. We find our seventh year one of "glorious growth in Christian Science." Every report shows increase many fold. The weekly services, held in five of the public institutions of our city, report interesting healing of bodily ills and prejudice destroyed. The reading room receipts for the single month of December were double those of its entire first year. Sixty-eight stations for distribution of literature are maintained in the city. More than all, the uplifting work for the Concord church and The Mother Church has brought great individual growth, which found free expression to-night in eloquent gratitude to God, to you, who have acquainted us with Him, and to your students, who have faithfully reflected upon us the light you showed to them.

Gratitude opens "the windows of the soul" to the sunshine of Love, and its impelling power is daily strengthening the bonds of true unity throughout the Christian Science work in this city, which is shown in thoughts of united action among the churches.

Beloved Leader, thou hast prayed "for the peace of Jerusalem," and thy prayer is heard.

SECOND CHURCH OF CHRIST, SCIENTIST, MINNEAPOLIS,
MINN. LOUISE W. CHAPMAN, *First Reader*.

Utica, N. Y., March 17, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Our Dear Leader:—We, the members of First Church of Christ, Scientist, Utica, N. Y., send you a message of love and thanksgiving as an echo from our annual meeting. Each year brings to us many new and convincing proofs of the truth and practicability of Christian Science, and causes us to love you more dearly and feel more deeply what your unselfish labors mean to the world. We, like a recent writer in the *Sentinel*, think of what it would mean to us had you not discovered Divine Science,—when would any of us have been able to find out these wonderful things for ourselves? But, thanks be to our loving Father-Mother God, one was ready, one was obedient; and with love for God and mankind, unwavering faith, and strength of purpose, the toilsome way has been unswervingly pursued, and we are all rejoicing in, and sharing the fruits of her wonderful consecration and self-sacrifice. May we prove our appreciation of this noble life-work by walking in the footsteps of our faithful Leader, and by a loving life.

Our church is steadily, though not rapidly, growing in numbers. We are adjusting ourselves very kindly to new conditions, such as change of Readers and other officers, and we are most grateful for the light of Christian Science, which, though cares perplex, still shines clearly, and "Love doth guide."

Very lovingly yours,

MRS. ELLEN L. PERCY, *Clerk*.

In behalf of First Church of Christ, Scientist.

Testimonies of Healing.

Christian Science has been the light of my life for seventeen years. At one time my life was despaired of by my family and physicians. I had been an invalid for three years from a complication of diseases and was gradually growing worse, until it was decided to send me to a sanitarium where it was hoped that I might recover my health. During the months which I spent at this institution, everything that the kind physicians and trained nurses could do for me, was done, with the hope that through baths, diet, and massage, I would be strengthened to undergo several operations, without which, they told me, I would never be able to walk, or stand on my feet again with comfort. All these efforts failed, however; I continued to lose flesh and strength, and finally was sent home to die, being assured that there was no hope of my ever being well again. At this point, with a husband supposedly in the last stages of consumption, and two delicate little children, Christian Science found and healed me. In thirteen days, and for a trifling expense, I found myself a well woman. Never can I forget the joy of those first days of my new life. Many times since then, the memories of that heavenly joy have strengthened me in trials hard to bear, and in over-coming obstacles that have seemed almost insurmountable. I had an opportunity to study Christian Science at the same time that I was healed and began at once to try to live the life of a Christian Scientist.

My husband had been obliged for a number of years to go away each winter to a milder climate, returning in the spring to take up his business again; but this year, feeling so much weaker than ever before, he called an eminent physician from a distance, to examine him and advise as to the wisdom of selling out and closing up his affairs before he left. After a careful examination he was advised to do this, and upon his questioning the physician as to his condition, he was told that he could hardly live more than two months, while to the family it was said we might look for the end any day. This was the problem that confronted me with my new-born understanding. He had witnessed my wonderful cure, readily gave up his remedies, listened to all I had to say and accepted much. The first year his improvement was so gradual as to be almost imperceptible. The second winter, instead of going to a lower altitude and warmer climate, as we were advised, we went to live at a mine having an altitude of eleven thousand feet, and here he went every day from the mine to the mill, a distance of two miles, in all the storms of winter, attending to his business without serious inconvenience, and his improvement was slow but steady.

The year that we spent in this lonely spot, up in the clouds and snow, was a marvelous one in my experience. Being a day's ride from a railroad and telegraph station, with no Christian Scientist nearer than Denver, a hundred and fifty miles away, and in a place where it was impossible to secure domestic help, I was obliged to depend upon God alone, demonstrating for the delicate children, for the dear husband, and over fatigue, while performing all the household tasks for our little family of four. Later, we moved farther away and false literature fell into my hands. My thought became confused, my demonstrations less clear. I was still conscientiously trying to work out my problem, and my experience in this period makes my heart go out lovingly to the dear brothers and sisters who are seeking help in the wrong direction, and not finding all that God has for the childlike thought,—the thought that is willing to be led, content to obey, and that bravely strives to surmount difficulties, instead of wasting time in looking and hoping for an easier way. How we long to spare them these needless struggles, and to help them to be brave, and true to the teachings of Science and Health. No higher, purer light has ever dawned upon human consciousness than shines

from the pages of this precious book. I am thankful that its light was not long hidden from me by a false sense, and that I soon learned, and am still learning, that a material sense of personality is the greatest hindrance in my every demonstration.

About five years ago my husband decided to have his life insured, and readily passed the examination of one of our best companies. When he told the physician that he had once been given up to die with consumption, the doctor examined his lungs again, and said, "Whoever said that you ever had the consumption, didn't know what he was talking about; if there had ever been a touch of tuberculosis, a physician could easily discover it. You have never had consumption; you are a perfectly sound man." Thus perfectly does truth do its work. The frail children have grown into strong young womanhood, with Christian Science for their only help. Our youngest child is twelve years old, and has never tasted medicine. All these things demonstrate in a measure the healing power of Truth.

I have tried a number of times to write a testimony for our dear periodicals. This, like the others, is not brief enough, but I write it with a heart overflowing with gratitude, and with a desire to live a more obedient, consecrated life, and to be more unselfish in my Christian Science work.

ELLA DEARING CAMPBELL, Denver, Col.

Before coming to Christian Science for the help I needed, I had pondered often over the "God" and "heaven" of which I had been taught; but my pondering was a groping in darkness where no ray of light might enter. It caused me so much uneasiness that I could not feel drawn to unite with the church, as many of my friends had done. I felt little sympathy and was not at all satisfied, for while I was not religiously inclined, I had, as have we all, the instinct to seek and know the "Father"; but I could not find Him as it seemed to me He ought to be known in religious experience. My Bible reading, which, because of my lack of spiritual perception and true understanding, was neither frequent nor comforting, failed also to satisfy my hunger; but had I been willing to seek diligently in the way of His appointing, the bread was right at hand. My mother had, several years previous, been healed of many diseases through Christian Science, and was an earnest student of its teachings. Her application to the serious study of Science and Health by Mrs. Eddy, had done the healing work. I accepted her help gratefully in illness, and was healed of many ailments, but being socially very much occupied and finding pleasure therein, I chose rather to direct my gratitude to my mother personally, than to gain an understanding of the Principle of being for myself.

Finally, in great grief, when human sympathy availed me nothing, I sought and found in Science and Health the comfort promised me if I would but read, for I there found God—the God I longed for, who embraces all, an infinity of Love and harmony. To know that whatever the seeming, we are one with Him, never separate from the divine Principle who governs absolutely, showed me that sorrow cannot shut out joy, although I could not demonstrate immediately, in its wholeness, the certainty I felt of this truth. During the four years since that time, proofs of God's love and care have been more than I could tell. The conditions attending the birth of my girl baby were to me convincing evidence of the power of Truth, while her subsequent growth, the unfolding of a beautiful character, has attended the realization of ever-present Love and Truth.

Who can wonder that we love Mrs. Eddy and give thanks for her work, when by her spirituality she has been able to make clear the teaching of the Wayshower, and his life-purpose, and by her love for all mankind to direct us as a mother would her erring children whose growth in grace was not sufficient to meet the daily need. Where formerly I

used to wonder why I should be selected, above others no better than myself, to endure trials and griefs, I am now able to silence self-love and self-justification by knowing that every trial met and overcome is a purification; and that in proportion as we yield with true appreciation to the correction of divine Love do we grow in the realization of Life as God, and manifest that Mind "which was also in Christ Jesus," loving our neighbor as ourselves.

MRS. L. N. NEWBRE, South Haven, Mich.

To tell of all the benefits received through Christian Science would be impossible, for their name is legion; but some of the good things which this blessed truth has brought to me stand out prominently, and for these and all I am deeply grateful to God and to our dear Leader. These blessings have changed the whole atmosphere of my life and enabled me to realize, in a measure, "God with us." For several years before being treated in Christian Science, I had read Science and Health, and was healed of a number of ailments which had seemed to be realities.

There came a time when I needed treatment, and as a result of patient, loving work I was healed of a sense of weariness. I had taught school for about twenty years, and could not work through a day without extreme fatigue. Words fail to tell what the blessing of relief from that one trouble has been to me. Tasks which under error's bondage had been performed with toil, under the new sense of freedom which belongs to God's child became a delight and recreation, and harmony was realized under the very conditions which had before proven so irksome.

At the age of sixteen I had joined an orthodox church and supposed I was looking to God for help, until shown by Christian Science that I had always been leaning on a human arm. The lesson, though bitter at the time, was salutary in its effects, as truth always is; and nothing but divine Love, realized and reflected, could have shown me where to go for help. After this healing, error seemed to manifest itself in the form of doubts, but Truth again furnished the antidote. One Sunday it was my privilege to be at The Mother Church and listen to a message delivered by our Leader. Her words I shall never forget, nor shall I ever cease to be grateful for the healing in my thought which followed them. I have never seen the words in print, but they seemed to be written indelibly in my consciousness, with no possibility of their being effaced. "O words with heavenly comfort fraught!" they indeed assured me that God does remove burdens and heals the sick and the sinful.

Until enlightened by Christian Science, I knew not how to love my enemies, but it has made the way plain indeed. It has taught me that I have no enemies save in my own thought, and it has also taught me to see my so-called enemy aright, which I had vainly striven to do because I was groping blindly in the dark. Are these reasons not sufficient for knowing that the truth as taught in "Science and Health with Key to the Scriptures" by Mrs. Eddy, does heal the sick and sinful?

ISABEL S. COLEMAN, Greenfield, Mass.

In 1897 the truth was being whispered to me, though I then knew nothing of the teaching of Christian Science that heals and saves, but it told me there was something better than anything I then possessed. At this time I united with an orthodox church, believing that I had to do my part in the work in order to gain the results that follow Christian labor. The voice of Truth was still leading me on, and in the early spring of the next year Christian Science was brought to my notice by my wife. She had heard of it through a friend who had been healed of a very bad case of consumption, and who was then in perfect health. Through the information gained from this

friend we purchased "Science and Health with Key to the Scriptures" by Mrs. Eddy. We began the study of the "little book," and it has revealed the spiritual sense of the Scriptures to us in a very satisfactory manner, making the sayings of the Master so clear that we cannot help seeing and laying hold of the truths they contain. Like a great many, we did not come into Christian Science through the healing of physical disease, but we can say that it truly heals all our diseases. Among the many things that we are thankful for is this,—that it teaches us how to prevent disease, thereby destroying it before it makes itself manifest on the body. It has cured the tobacco habit and many ailments of long standing, such as asthma, dyspepsia, nervousness, hemorrhage and sick headache. We cannot begin to tell the half that Christian Science has done for us, and we cannot be too grateful to our Leader for the great good she has done and is doing for mankind.

EDWARD D. YOUNT, Fremont, Neb.

When Christian Science first found me, four years ago, I think it would have been hard to find a more unhealthy, unhappy, and discordant person. I was suffering from a severe form of hereditary scrofula. The conditions were such that every organ in my body seemed to be affected, and for ten years I never knew a perfectly well day. I had been treated at different times by *materia medica* for catarrh, kidney trouble, stomach trouble, and at last the disease manifested itself as consumption of the lungs. I had tried all sorts of material mixtures and blood medicines, yet steadily grew worse, until I lost all faith in doctors and drugs, and was practically without hope or God in the world.

About this time I first heard of Christian Science through a neighbor, and borrowed a copy of Science and Health. How grateful I am for the gift of perception, that made me see at once that this wonderful book contained God's truth and nothing else; and what a change came over my consciousness when I realized that God, good, was not the author of evil, sin, sickness, and death, but the author of good only. I saw what Habakkuk meant when he said, that God is "of purer eyes than to behold evil," and I also saw that the Principle revealed in Science and Health is perfect, and that if I applied correctly the truth therein taught, no power on earth could prevent me from getting the full benefit. Every spare minute was given to reading, and it was not long before one ailment after another began to disappear. In about four weeks' time I laid aside glasses which I had worn for eight years, and have never had the slightest use for them since. Chronic constipation disappeared about the same time, and in less than four months all sense of soreness left my lungs. The belief in this disease was so deep-rooted, however, that it persistently tried to manifest itself in some other form, yet I worked on, full of hope and good courage, knowing that God, good, is the only power, and sooner or later truth would prevail.

To-day, after four years' faithful study of Science and Health, I can say it has made me a happy, healthy woman. I give loving thanks to God, and to our Leader, Mrs. Eddy, who goes before us and opens the way.

MARY G. RENNIE, Norristown, Pa.

Eight years ago I came to California for the climate, a broken-down, discouraged woman, with a supposedly incurable disease. My father had been an invalid for many years. I was thought to have inherited poor health, and from childhood had never known a day free from pain. As I grew to womanhood my studies and work were at times interrupted by illness and nervous collapse. I was under the treatment of some physician a good part of the time. Finally, while in France studying art, a lung trouble developed which at first made such progress that it seemed doubtful if I would be able to

return home. I went to the south of France for the winter and in the spring came to California. After trying the fresh-air cure, living out of doors for several months and finding myself growing worse, to please a relative I submitted to Christian Science treatment. I, however, attached no importance to the treatment, not expecting the least benefit from it. After some time I found myself improving. Then I wished to know what could be producing such a wonderful result, and I began reading the literature. Slowly I grew back to health. Many other ailments disappeared and finally the lung trouble disappeared also.

Soon after I began the study of Christian Science, my attention was held by the teaching on page 240 of Science and Health. Here was the clue I had sought all my life,—the purpose for which to live. I had long desired to find something real and substantial, something to make life worth living, but had found nothing that satisfied, and here was a gleam of light in the darkness. I now saw that the end of life was the reflection of Love. The humblest task became noble with this purpose.

Following this clue, I have for seven years been trying to find the way out of the tangles of the sense dream of life, and up to where divine Love and its manifestation are known as all. Grateful as I am for being free from physical suffering, this sense is swallowed up in the greater gratitude for an ever-unfolding knowledge that God is Love, and He is now and ever expressed.

With each step ahead, each conquest over self and sin, love and gratitude go out to our Leader for her life, for Science and Health, and for all the helps she has given us.

LUCY A. BACON, San Jose, Cal.

Never so much as in the last few days have I realized what a privilege it is to be a Christian Scientist. Whenever discord and doubt of any sort presents itself, I turn to Christian Science and expect it to work out perfect harmony, and when earnestly applied, it has never failed.

Many times we are placed in a position where it is hard to decide which is the right and wise course to take, but we, as Scientists, can go to Truth. I have been in Christian Science five years, and in this time have had many blessings come to me and my friends through its application. I have seen sin and disease disappear, and purity and health take their place. As a mother, I feel I am greatly blessed in having Christian Science, for it enables me to know that the responsibility of bringing up my children is not mine, but God's, and that they are safe in His perfect keeping. My part is to know that God governs and takes care of them, and as I am learning the truth of this thought, I am able to leave them for any length of time that is necessary, and never fear and worry about them and their safety. For this, and all the help I have had, I am most grateful, and my one wish is to learn and apply more and more of the truth in my life, and never to forget all that Truth has done for me. I feel great love and reverence for Mrs. Eddy, for showing us this new-old way.

MARIE ADELE PARKER, Evanston, Ill.

I have felt it my duty for several months to tell what Christian Science has done for me. I had been a sufferer from fistula for two years. I was also suffering from a stomach trouble, heart disease, and nervousness. Anything I ate would cause me to feel oppressed, my heart would begin to flutter, and then I would get nervous and weak. I felt as though life was a burden, and I was almost driven mad at times. I could not work at all. I was operated on by the best surgeons in two large cities, but they left me in a much worse condition than they found me. At this stage came Christian Science, to demonstrate that "God is Love," and that "The prayer of faith shall save the sick." I took treatment from a Christian Scientist, and was healed in

one week. My health has been perfect ever since. If there is any poor sufferer from any kind of disease who may chance to read these lines, let me say to him that he can be brought into perfect health, peace of mind, and prosperity through Christian Science. I am thankful to know that Christianity in this age has reached that lofty summit spoken of in the last chapter of St. Mark's gospel.

TOM DRYSDALE, Durango, Cal.

In the spring of 1903, while playing with some school-mates, my collar-bone was broken. I told my friends to go on playing, but that I wouldn't play any more. Then I went in the house and lay down.

After a little time, my sister told my mother that she thought the collar-bone was broken. My mother came in and told me to raise my arm, but I could not, for something hurt me. She then asked if I would like a doctor. I said, "No"; so she took Science and Health and read to me until I fell asleep. I slept soundly all that night and every other night following, but one. My mother treated me for a few days and then requested another practitioner to continue the treatment. I got well quicker than I expected, for I was out of school just one week. There was a lump on my collar-bone all summer, but it is gone now. I am very thankful to God, and to Mrs. Eddy, for the help in time of trouble. I am a little girl eleven years old.—RUBY I. WHITE, Anita, Ia.

Eleven years ago two Christian Science ladies called at our home in Lexington, Ky., to see me, then a hopeless invalid, to mortal sense. Every possible attention had been bestowed by a good husband and kind physicians, for years, but I was "nothing bettered." One of the Scientists began treating me, and we borrowed "Science and Health with Key to the Scriptures." I read, and my husband read to me, often until midnight. In five days I was eating heartily and doing my housework. We bought Science and Health, "Retrospection and Introspection," "Miscellaneous Writings," and Mrs. Eddy's other works. We also subscribed for the *Christian Science Sentinel* and *Journal*, and while it seemed necessary for us to return to and live in our home town, where a Christian Scientist is seldom seen, yet our *Quarterly* lessons and Christian Science literature are to us a daily spiritual feast. This manna is feeding, healing, and sustaining us, and we are striving to bring others into the fold by loaning our Leader's works and sending out copies of the *Sentinel* and *Journal*, that this truth may unfold to their understanding, and that they too may rightly appreciate and love our dear Leader, and know God as Mind, infinite Love, divine Principle, and His Christ, whom to know aright is life eternal.

K. MONTGOMERY BATES, Elizabethtown, Ky.

The Bible teaches that we need not fear poison of any sort. I remember when I was a little girl, I unknowingly touched some poison ivy, with the result that my face and hands were irritated and inflamed for some time. Since I have learned to trust in the promises of Christ Jesus, illumined by the teachings of Christian Science, I have had an opportunity to prove man's immunity from a like evil. A friend and I went to stroll in the woods, one afternoon, and I sat down on the ground under a huge tree. Suddenly my companion cried out in great alarm that I was sitting in the midst of a mass of poison ivy, with my bare hands right among the leaves, but I felt no fear, and went home without giving it a thought. That evening, however, I began to feel an itching and irritation under the skin, and a wave of fear came over me lest I might have been affected after all. Then a calm, soothing thought from our text-book came to me (Science and Health, p.

515), and straightway I knew that I was healed, and I rejoiced anew in the gospel of health, and peace, and love.

FRANCES G. SMITH, Toledo, O.

I should like to express my great gratitude for Christian Science,—the message of God,—revealed to us through our Leader, Mrs. Eddy; for the happiness it has brought to me by physical healing, by the realization of God as Love, and that we, as His image and likeness, must reflect Love. I have been led more and more, day by day, to an understanding of the teaching of our text-book. My daily prayer is for more spiritual understanding, that nothing may hide the truth from me, and that I may never forget that God, good, is the only power, the only creator.

CAROLINE HOTHAM, London, England.

I desire to acknowledge some of the benefits received through Christian Science, which was brought to my notice in an hour of great need, when bound by the sense of sin and sickness. Through the help of a dear practitioner, and the study of our text-book, Science and Health, together with the Bible, I have been greatly benefited,—healed of a number of ailments. I am very thankful for what Christian Science has done for me, and for even my limited understanding of this truth that "makes free." I feel thankful to God for our Leader, Mrs. Eddy, who has been so faithful in pointing to others the true way to Life.

ALICE COTTRELL, Excie, Mont.

The blessings I have received through Christian Science have been numerous. They include not only the cures it has wrought, but the uplifting of the thought, spiritual understanding. Since this truth came to me, ten years ago, I have been relieved of rheumatism and kidney trouble in the worst form. Words are inadequate to express how grateful I am for the help received. The struggle was hard at first, but it only served to make me stronger, and it proved to me that God is ever present in times of trouble and that His promises are sure. Mrs. Eddy, our beloved Leader, tells us in Science and Health that we should acknowledge what God has done for us. He has been my only help and I know that without faith it is impossible to please Him.—ELIZABETH WILLIAMS, St. Joseph, Mo.

For thirty years I was a member of an orthodox church, and a sincere seeker for the truth, but I was groping in the darkness of materialism, where the light shone in the darkness, but the darkness comprehended it not. Since acquiring an understanding of Truth from "Science and Health with Key to the Scriptures," the Bible and Mrs. Eddy's writings have been my constant companions and guides. I have had many beautiful demonstrations, and have found that for which I had been seeking in vain so many years,—the pearl of great price. Christian Science has given me that peace of mind which passeth all understanding, and which the world cannot give or take away. I am unceasingly grateful to our Leader, who has thus revealed this great light to a waiting world.

MRS. FRANCES H. COIT, Chicago, Ill.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

From our Exchanges.

The Rev. Dr. Russell H. Conwell, in an address on "The New View of the Christian Life" at a meeting in Boston, is reported by the *Boston Herald* to have said,—

Prepare yourself for heaven, was the teaching twenty-five years ago. Jesus never prayed that any one might go to heaven, but that heaven might come on earth. The change that has come in this respect is one of the most remarkable in the history of human thought. We have come to the belief that there is something to be done in this world.

We are learning now that God's great purpose on this earth is to develop the earth and make perfect manhood and womanhood. The time is coming when man will be perfectly healthy, his mind will be perfectly clear, his moral character absolutely pure. The time is coming when woman shall be as beautiful as the angels, in health, in thought, in life, in character.

It is beginning to be a kind of wickedness to desire to go to heaven. I don't mean that I have no desire to see heaven's gates. I have. But this world is not such a vale of tears as they used to teach us it was, and if God is going to call me hence, let Him find me at work when He comes and not neglecting my work while I contemplate things that are to come. The religion of to-day has become so practical that we don't ask if a man is happy when he dies. We want to know how he lived.

I never will get a man ready to die, but I will go to him and get him ready to live. And if a man be ready to live, he is always ready to die.

It does not require much penitence to say, You have done the things you ought not to have done, and you have left undone the things you ought to have done, and there is no health in you. It does not require much piety to say, God be merciful to you a sinner. It requires very little courage to preach against the sins of a very successful sinner to a congregation of very moderately successful sinners. It is against the folly and the sin which measures success by the largeness of acquisition, not by the greatness of service; which says, every day but Sunday, He that would be greatest among you let him be richest of all, that the Church and the ministry should bear witness. It is against that spirit of acquisitiveness which defiles and degrades and dishonors this otherwise great age and great people that the Church and the ministry should arouse the national conscience; and they should so arouse it that each man will re-read the record of his own life, not that of his fellow, and will hale, not his more successful competitor, but himself, before that awakened conscience for Christly judgment.—*The Outlook*.

The Law of retribution followed the prodigal son from the day he began to waste his substance in riotous living. It follows all sinners, though they do not always recognize it. But so did Law's birth-twin follow that son, and when the Law had done its work, its work that to the careless eye seemed cold and cruel—for to be so hungry one would fain fill himself with the food of swine, typifies an almost maddening despair—when Law had thus, as with a rod of iron, broken down the crusts of that sin-stricken heart, and the prodigal "came to himself," and yearned for his father's roof and the blessings of the deserted home, then Love met him on the road, and the twin forces sealed their holy work when the arms were folded about his neck and the kiss of forgiveness pressed upon his lips. Law and Love, they build us even a refuge from sin and its sting.

The Universalist Leader.

True preaching must of necessity be a message from God, and must therefore rest upon some higher authority than the tastes or desires of the preacher.—*The Standard*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.

Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEED THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The Navy Department is in receipt of a proposition from the Marconi Company for the establishment of a wireless system of communication between San Francisco and Hawaii. The distance is about twenty-one hundred miles, and presents numerous difficulties. It is proposed to have stations on the islands so situated that it will be possible ultimately to send a message from San Francisco to Manila by wireless. As the Marconi people ask an exclusive use of that system in the reception or sending of messages under any conditions, the Navy Department officials do not look upon the proposition with favor, it being held that the Government wireless stations should be in a position to send or receive messages without restriction, and should be permitted to exchange communications with any station on ship or land.

The Seventh International Railway Congress, which opened in Washington last week, is an event of much moment. This is the first time that the eminent railway scientists, who represent the most advanced thought and practice in Europe and the world at large on railway subjects of an internal nature, have ever held their deliberations on this side of the water, although European representatives have frequently been in the United States to investigate American methods of railroading.

The entire Interstate Commerce Commission proceeded to Chicago last week to begin an investigation of the operations of the private car lines owned by the Armours, the International Harvester Company, refrigeration charges for the transportation of fruit, terminal charges and the rebate question in connection with private car lines.

Foreign.

M. Jusserand, the French Ambassador at Washington, has advised the Foreign Office at Paris that James Stillman, the banker of New York, has given \$100,000 to establish prizes for the School of Fine Arts there. The gift, which was unsolicited and unexpected, is in recognition of the facilities France has given American art students.

The Sultan of Morocco has placed Raisuli, the bandit who captured Perdicaris and his nephew, Mr. Varley, last summer, in complete control of the Fash district, an immense province which leads up to the very gates of Tangier. This was part of the demand made of the Sultan as the price of surrendering the two captives.

The report of the Russian Bouligian Commission, with a preliminary draft of the proposed national assembly, was promised for this week. Various rumors as to its contents were current, but no authoritative statement had been made, and it is entirely possible that further delay may ensue.

The Government of The Netherlands proposes to give the Carnegie fund \$280,000, to purchase the ground for the Palace of Peace, for which Mr. Carnegie donated \$1,500,000. The site comprises an area of twelve acres and is the property of the Zoological Garden Society.

The French Government cable connecting Cadiz, Spain, with Tangier, provided for by the Franco-Spanish convention, has been completed. It is considered another step towards the consolidation of French interests in Morocco.

Two prominent Hollanders are now in the United States trying to interest Mr. Carnegie in their plan to make a World Capitol near The Hague.

The Italian Chamber of Deputies has passed a bill nationalizing the railways of the country and making railway employees state officials.

Industrial and Commercial.

"The railroads of the United States are far ahead of England's," said one of the directors and officials of the London and Northwestern who came to attend the International Railway Congress in Washington last week. Continuing, he is reported to have said: "Since coming here we have been greatly impressed with your railroads. Probably no country in the world is ahead of the United States in this respect. Railroad equipment, especially in the Eastern States, is well-nigh perfect."

The lower house of the Legislature of Newfoundland has confirmed a contract granting the Harmsworths, the English publishers, the pulp concessions on two thousand square miles of the interior of the island for the establishment of pulp mills. The Harmsworths paid \$500,000 for the property and undertake to expend \$1,000,000 in sixteen years.

The Minnesota, on her last trip from Seattle to the Orient, carried a cargo of twenty-four thousand tons of freight and fifty-seven locomotives for Japan. The locomotives are consigned to Yokohama and are to be used on the railroads of Japan and Manchuria. They are of the Japanese standard gauge, three feet and six inches.

The new San Pedro, Los Angeles, and Salt Lake Railway was formally opened to through traffic May 1, when passenger trains left both Los Angeles and Salt Lake City for through trips on regular schedule time.

A syndicate of Pittsburg capitalists has secured two hundred and fifty acres of ground at Ambridge, upon which, it is reported, will be erected a \$3,000,000 plant for the building of railroad coaches and street cars. Ground will be broken for the buildings about July 1.

A sugar-cane cutter has been invented that promises to work as great a change in the sugar-cane industry as did the cotton-gin in the cotton business. It is claimed that it will do the work of a hundred men.

The Sahara Railroad, one of the most gigantic and important works undertaken by the French Government, a road that is to connect Oran and Timbuctoo, is nearing completion.

According to present indications, the output of pig iron in the United States in the calendar year 1905 will be about 20,000,000 tons, or not far from half the world's yield.

The official report on the cotton crop of 1904, as returned by the ginner, and including the linters, is 13,584,457 bales of five hundred pounds.

The Baltimore and Ohio Railroad Company has closed contracts for 250 new locomotives that will cost, in the aggregate, over \$4,000,000.

General.

The earthquake which recently occurred in India was duly recorded upon the instruments at the various seismic stations throughout Europe, but only those at the French station at Val Joyeux, near St. Cyr, are identified with one particular shock. On April 4, between 1.10, 1.19 A. M. and 1.37 A. M., these instruments were violently affected. It was precisely at this time, which represents 6.20 A. M. Lahore time, that Lady Curzon was awakened by falling masonry. This interesting fact and identity was reported to the French Academy of Sciences by M. Mescart.

The *Outlook*, commenting on the far-sighted spirit with which the section about the Falls of the Zambesi has been developed, says: "The men who have charge of this great enterprise were by no means indifferent to the practical importance and the pressing necessity of the railroad; they have secured the bridge, and they have also preserved intact the majesty of one of the greatest spectacles in the world. . . . In striking contrast to this far-sighted treatment of a great natural possession is the measure lately before the Legislature of the State of New York, which, had it passed, would have reduced the volume of water which pours over the American Fall until it would present, not the majesty of a great torrent, but a mere dribble of water over the face of the rocks."

A discoverer of the Argentine Republic has found in the Falls of the Ygnassu, which river forms part of the boundary between Brazil and the Argentine Republic, a waterfall which surpasses that of both Niagara and Zambesi. He says: "The precipice down which the river plunges is 210 feet high, while that of the Niagara is only 167, and the width is 15,123 feet—almost three times that of the Horseshoe and the American Falls combined. At every season that cataract puts all the others in the shade, but in the rainy season, when the river rises from six to ten feet, it is simply stupendous." It lies, however, in a place not now easy of access, nine hundred miles from Buenos Ayres.

Emperor William, while ashore on his recent visit to Tangier, saw a very tall Moor, talked to him, and arranged that the man should join his Majesty's company of tall men of the First Guard Regiment. The Moor has now been assigned to carry the regimental standard. He stands 6 feet 10 7-10 inches high.

A tenth satellite of Saturn has been discovered at the Harvard College Observatory by Professor Pickering from an examination of photographs taken with the 24-inch Bruce telescope. The motion in its orbit is direct. The new satellite appears on thirteen plates.

There are 252,436 miles of ocean cable in operation. Only 38,797 miles are owned by governments. The British cables which connect London with all parts of the world, have a total mileage of 154,099.

In a survey of the Scottish lakes a depth of 1,017 feet was reached in Loch Moray. This proves to be the deepest lake in the United Kingdom. Only seven deeper lakes are known in Europe, four being in Norway and three in Italy.

St. Petersburg's population at the end of 1904 was 1,578,200.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

"What must I do to be saved?"

WILLARD S. MATTOX.

THE greatest question of all time has been and will be, "What must I do to be saved?" Every other question engaging the attention of mortals becomes petty, utterly insignificant, in the presence of this query which relates to permanent peace and eternal freedom. Men may busy themselves for a few flickering years with other questions, "What must I do to be rich, powerful, famous?" but the really important thing is to find out what I must do to inherit eternal life, for when I have that, I have all the rest,—I am rich, have dominion, am well known, and though least in the realm of spiritual things, I am greater than he who is dreaming a temporary dream of heights gained and difficulties surmounted. Jesus knew this, hence he said, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." In the endeavor to answer purely material questions of economics or utilities, we miss, not only the primary objects of our search, but the ultimate of man; namely, salvation. On the other hand, if we can only bring ourselves to forget personal needs, ambitions, desires, fears, and doubts, and give ourselves up to the profitable search for salvation, we shall be rewarded by a satisfactory answer to that original question, and when we awake in His likeness, awake to the realization that we are saved; all other questions as to limitation, possession, enjoyment, sensation, will also be answered.

It is not profitable to waste time discussing the human fact that man needs to be saved. If there is one point upon which all men find themselves in practical agreement, it is the necessity for salvation. There is no disposition to dispute human suffering and sin. From these unideal conditions man, every man, no matter what his color, race, creed, or station in life, wants to be liberated. From these conditions the human race has struggled for centuries to free itself; in its extremity it has gone to almost ludicrous lengths, and has involved itself in the most curious inconsistencies. Groaning under an appalling consciousness of discord and misery, the human family has at one moment made frantic efforts to resist pain and death, and at another has tried to reconcile itself to a condition from which there seemed to be no escape, by assuring itself that it was the will of God.

Although we all agree that there are untoward circumstances from which it is highly desirable to be freed, our notions as to the best method of bringing about the object of our desires have been many, varied, and contradictory. The fundamental mistake seems to have been made when the scheme of salvation was divided up into several parts, and it began to be taught that a man must look in one direction for moral and spiritual improvement, and in an opposite direction for relief from physical suffering. To this mistaken philosophy we owe our centuries of failure to achieve entire salvation, because,

manifestly, when we know how to be saved, and there is the desire to be saved, we are saved. We have fallen short of redemption, not because we did not recognize our need of it, nor because there was not something which could save us, but because we did not intelligently understand and apply this saving power.

Salvation is something to work for, it is something to demonstrate. If it were faith, or blind belief, or mere human willingness to be saved, man would have been redeemed long ago. Salvation is not believing, or hoping, or expecting, it is knowing. "Ye shall know the truth, and the truth shall make you free." Knowing the truth constitutes salvation. At no point is the process material, hence the futility of employing material means to bring about salvation. Even when the condition demanding salvation is physical, the process is mental, as Christian Science has demonstrated so many times that the point is no longer open to discussion. The Christian Scientist finds out that mere belief on his part is not enough. Belief in Christian Science is better than opposition to it, better than belief in some other systems, but the demands of the Saviour are that we shall *know* the truth. As we add to our store of positive knowledge of the rule and practice of Christian Science, we lose any lingering sense of apology or excuse for the more radical and abstract statements of Christian Science. The Christian Scientist who is afraid to give a treatment, who is afraid to respond to a righteous appeal for aid, has not gone farther than to change his former beliefs into a belief in Christian Science. Lacking accurate knowledge, he has no confidence, either in the truth or his ability to express truth. The only way to gain confidence in God is to prove Him. Growth without demonstration is not possible in Science.

A sick-ridden and sin-laden world needs to learn the answer to these questions, "What must I do to be saved from every kind of discord, from pain and lack, from immorality and selfishness? Is there one Saviour, or many? When I find my Redeemer, will he not be my Saviour from everything that is unlike God? When I really become conscious of the Divine, the saving presence, will I not be as free from physical, as from moral blight?" There is a great deal said about salvation in the Bible, and Christian Science calls attention to utterances which are ages old, which have not by any means lost their efficacy, but which have simply been neglected. Jesus said that the "Son of man is come to save that which was lost." The record of his earthly ministry indicates that he spent much of his time in healing bodily ailments, and his attitude towards mortal discords is perpetuated by Christian Science. He said plainly that to heal or destroy sin was to heal or destroy sickness; in other words, the Saviour is come to free man from sinful, carnal, material thoughts, and from disease and death, the effect of such thoughts. Sin was given a broader definition by Jesus, and was made to include much more than the formal schools of theology of his time or of ours have attributed to it. To Jesus, sin evidently meant everything or anything that was unlike God, and God, to him, was Spirit; therefore, whatever had to do with matter,

Copyright, 1905, by Mary Baker G. Eddy.

even though it seemed in itself harmless enough, and even though matter called it good, to him, was not God, not good.

Hosea says, "But I will have mercy upon the house of Judah, and will save them by the Lord their God, and will not save them by bow, nor by sword, nor by battle; by horses, nor by horsemen." This is clear enough, and emphasizes the Christian Science teaching that salvation is not to be found in human resources, is not to be looked for in matter or material remedies, neither in the human will, but in God alone. David says, "Salvation belongeth unto the Lord," and again he prays, "Give us help from trouble: for vain is the help of man." Now the man who is suffering from sickness, from business reverses, from utter despair, is certainly in trouble and would be glad to be helped out of it, and human experience has abundantly proved that material aid is indeed vain. It turns us confidently to God, for the prophet Isaiah represents Him as saying, "I, even I, am the Lord; and beside me there is no saviour." If this be true, and all Christians profess to believe it, are we not throwing away opportunities and losing valuable time and expending our energy and talents uselessly, so long as we expect to be saved by drugs, by the human mind, by anything less than omnipotence, since He is indeed the only Saviour?

It frequently happens that the patient who comes to Christian Science really does not know from what he needs to be saved. He thinks it is a diseased body, when all the time it has been a discordant mental state, and the Christian Scientist must first of all show this man what it is that must be saved. This is not always pleasant or easy, but Science is inexorable. The patient will tell you he has had rheumatism for twenty years and he so longs to be free, when a mental diagnosis may reveal hate, envy, absorbing self-love, uncontrolled anger, or some of the kindred qualities of the human mind, the presence of any one of which would make it evident that the Saviour must heal this mental disease when its bodily effects will vanish. The good human who is a moral man or woman, cannot understand why he should suffer years of agony when he has not been a great sinner, and he will not understand, until he grasps Jesus' definition of sin. When the rich young man who had kept all the commandments asked Jesus what he must do to inherit eternal life, he was told to give up that which he cherished the most and follow the Christ-man, model himself after the spiritual pattern. In this particular instance, the sacrifice involved "great possessions," but what would the answer mean for you, or for me? Evidently Jesus meant to teach that salvation came by leaving all our material sense of things for the spiritual. We all want to be saved, but do we want to yield our love for that which interdicts salvation? When patients fail of healing in Christian Science, they sometimes say, "Why, I don't understand it. I read the book, and go to the services, and I've had so many treatments, and still I'm not cured." In other words, "All these things have I kept from my youth up," and the answer is to-day, as formerly, "Sell that thou hast,"—part with pride, love of money, love of merely *sensuous* ease, a desire for popularity, love of society,—get rid of anything that attracts you away from God, and you will have riches in heaven, in harmony and health.

Christian Science is not to be blamed if here and there one may be found who refuses to separate himself from the thoughts which produce discord. You cannot force a man into the kingdom of heaven. Jesus could and did point out to the young man who came to him, that which was holding him, but he could not and did not force him to sell his goods, and thus accomplish his salvation. Sometimes our journey in Christian Science seems slow, until hope deferred does make the heart sick and we begin to find fault with Christian Science, when all we need to do is to sell whatsoever we have that is keeping us from health and

harmony. Salvation is at our very door. It is possible to be free *now*, but, like the kingdom of heaven, redemption is within us, not outside of us, not in any other person, but in us, and it involves our selling whatsoever hinders. When we recognize this it makes us quite a good deal more humble, and certainly more gentle, more forgiving, less critical and complaining. We begin to illustrate the text, "All things work together for good to them that love God." And finally, brethren, in the words of Paul, "How shall we escape, if we neglect so great salvation?" How can we reasonably expect to escape misery and continued suffering, if we neglect the very essentials of salvation, that fearless purging of self which redeems us fully, not only from unhappy effects, but from the cause of those effects?

"Forgive us our debts, as we forgive our debtors."

SUE HARPER MIMS.

WHAT depths of meaning unfold, as thought dwells on this line of our Lord's Prayer, "Forgive us our debts, as we forgive our debtors." Our petition includes the condition of our forgiveness.

What is our duty, or debt to God, and to our brother? Our duty to God is to reflect Him, the divine nature, in word and deed; this also includes our duty or debt to our brother. It unfolds the fatherhood of God and the brotherhood of man. St. Paul tells us, "Owe no man any thing, but to love one another: for he that loveth another hath fulfilled the law." The Twentieth Century edition renders this: "Never owe any one anything except brotherly love; for those who love their fellow men have satisfied the Law." How complete is the manual for living and loving here contained! What comprehensiveness and depth in those words, "have satisfied the Law,"—the law of Life, Truth, Love. Analyzed in the light of Christian Science, this includes the healing and regenerating power of Spirit.

Our great debt to our brother is to see him as God sees him, as the divine image and likeness. To hold of him the true concept, "born, not . . . of the will of the flesh, nor of the will of man, but of God." It is this true concept of man that heals. This also is an essential of our duty, or debt, to ourselves, and is our worship of God "in spirit and in truth." Many obstinate cases of disease may be delayed in their perfect healing by the fact that the patient clings persistently to some false concept, some condition or belief of error manifested through personality; then the false sense of self-pity comes in, and the patient cries, "Oh, I have so much to meet!" We will continue to have much to meet, until the false sense yields to the true, the perfect, and the harmonious.

Our heaven is only our spiritual consciousness of the infinite harmony and perfection of Being, wherein man and the universe—all God's creation—is seen in its true expression, as spiritual, ideal in Mind, sinless, deathless, blissful. We thus see, that as we deny every manifestation of error which seems to appear in another, in that proportion we gain our own heaven, health, and harmony. This is a glorious, a blessed thing, that we cannot help another without helping ourselves, nor can we help ourselves without helping our brother, and this divine reflection is the true worship of God. Our enemy is never our brother, it is the one evil, mortal mind, or material sense.

In the Sermon on the Mount, Jesus said, "Therefore if thou bring thy gift to the altar, and there rememberest that thy brother hath ought against thee: leave there thy gift before the altar, and go thy way; first be reconciled to thy brother [see him in his perfect reality], and then come and offer thy gift."

This brings us face to face with our preparation for the healing and redemptive work, for the gift that we would bring is a pure spiritual sense or consciousness of the perfection, harmony, and immortality of all things, the recog-

dition of the infinite, omnipotent Principle, good, and His absolute government of all through perfect law; a glimpse of the divine reality. The gift is imperfect if a taint of earth or finity is there, unacceptable if one imperfect concept remain in thought; therefore, before we are able to do the effective work of breaking the bread of Life,—the truth of God,—or of offering the wine of inspiration to the famishing applicant, our own consciousness must be filled with a divine sense of all-pervading Love and harmony. With this agrees Isaiah's admonition, "Be ye clean, that bear the vessels of the Lord." "And they shall bring all your brethren . . . to my holy mountain Jerusalem. . . . as the children of Israel bring an offering in a clean vessel into the house of the Lord." Jesus once said, "For their sakes I sanctify myself," thus expressing his exalted sense of the sacredness of his ministry. A young Scientist once said, "There is so much discord at home, yet I constantly pray that I may know that Love governs me and is my ever-present Principle, but I have no results." I said, "Do you pray just as fervently that you may know that Love is their (the family's) divine Principle, too?" "No," she said; "I don't think I do."

We need to rise daily out of the finite, limited "me and mine" of personal sense, into the enlarged, glorious sense of "Our Father."

When this is recognized in the commercial world as a truism, that we cannot really separate the good of one from the good of another, nor from the universal good weal (wealth),—for good is one, universal, indivisible,—it will bless all mankind. As this is understood, and also that any violation of this law must inevitably find its reaction at some time, and in some way, it will revolutionize prevailing business methods. Then personal aims will be lost in a desire for universal good, material selfhood will lose itself in Love. This has been demonstrated to me many times: That as I give freely to the Cause of Christian Science, to the Building Fund, and to other needs, it invariably opens wider the channel through which supply flows to me. How we should strive daily to realize and reflect St. Paul's definition of Love: "Love suffereth long, and is kind; love envieth not; love vaunteth not itself, is not puffed up, doth not behave itself unseemly, . . . is not provoked, taketh not account of evil; rejoiceth not in unrighteousness, but rejoiceth with the truth; beareth all things, believeth all things, . . . endureth all things. Love never faileth." (Revised Version.)

He prayeth best who loveth best
All things both great and small;
For the dear Lord who loveth us,
He made and loveth all.

Only as we correct personal sense with the graces of Spirit, attained by the daily contemplation of these demands of Love, can we hope to be forgiven our debts, as we also forgive our debtors. All this is summarized in the spiritual interpretation given on line 7, page 17 of *Science and Health*.

A Reminiscence.

MAJOR N. E. FELL.

DURING the latter part of the South African war I was stationed in a Canadian city to carry out certain work for the home government. It was my custom to attend the Christian Science services held there, and I was also accustomed to come to the beautiful little church some half hour before the service began, to enjoy the peace and calm to be found there, after the turmoil of the week. Sitting thus one Sabbath, the First Reader came to me, with countenance, as always, beaming with love and happiness. There were to be great changes in church, he said; had I not seen the *Sentinel*? I had not. "Then you do not know that there is a new ruling which ordains that new Readers shall be elected every three years. To-day the new ones take up their office." I was young in Science then, and I said, "But will you not feel

it very much, to give up this post, after having held it for so many years, and after being identified with the building of this church?" With brave eyes and brave words he replied, "If I do, it just shows how necessary the new ruling is."

As the service began thus, with an atmosphere of love, so did it end. Those who had lately held the post of First and Second Reader were the first to congratulate and thank with hearty sincerity the new Readers who conducted the service. This little episode affected me more, I think, than any of the mighty works of healing which I have since seen accomplished in the field of Christian Science. God grant that we, too, may always be ready to show such self-abnegation, such love and ready obedience to divine Principle.

No Change to Truth.

J. S. E.

It is doubtful whether changes so marked and important in character as those which are now upsetting material theories, creeds, and dogmas, ever before took place in the beliefs, practices, and lives of men; and yet, Christian Science is simply re-introducing to the expanding thought of the age the truth which is as mighty to-day as when Jesus commanded Lazarus to come forth from the grave, for the might of that truth came from God, and God is the same, yesterday, and to-day, and forever. God changes not, but mortal belief is as changing as the shifting sands of the sea. Theories, creeds, and dogmas which rely upon the opinions and traditions of the past, and which are without a single positive demonstration of the presence and power of the infinite Father as evidence that God is in them, these furnish no permanent resting-place for faith and hope; while in Christian Science there are many cases of the healing of varied forms of disease, both chronic and acute, through the prayers of its devoted followers and their reliance upon God. These results are gained from a more perfect understanding of Christ, Truth, and are demonstrated within our very midst as a tangible proof of the power of "God with us," brought to our comprehension through the enlightening works of our beloved Leader, Mrs. Eddy. We know that this unceremonial, healing religion, without creed or dogma, is the religion that was brought to men by Jesus,—the Christ, the Son of the living God,—nineteen hundred years ago. So vividly is divine Love portrayed in Christian Science, that to our discernment God substantiates His eternal laws by actual demonstration within the sphere of human comprehension.

As we kneel in silent prayer, sending our messages of gratitude and praise to God for sending His healing truth, to bring us up out of error and discord into the harmony of Truth and Love, let us realize that the faithful dwell "in the secret place of the most High" and "there shall no evil befall" those who "abide under the shadow of the Almighty."

The Tulip Show at Pleasant View.

THE tulip show on the grounds at Pleasant View is now at its best, and lovers of flowers could well spare the time to visit that locality. As is usual, the beds are arranged around the fountain to the south of the driveway leading to the main entrance. In front of the fountain, and between it and the street, is a large star made up entirely of yellow tulips. Flanking the fountain and in the rear are large beds of gorgeously painted flowers, the ensemble forming a veritable sunburst of beautiful colorings. With the exception of the front bed all are edged with hyacinths, and their vari-tinted blossoms add to the effect. Seemingly the grounds at Pleasant View are the only location in the city where the tulips have reached their full beauty and maturity this year.

Selected Articles.

New Sayings of Jesus.

Our readers may remember that a great discovery by Dr. Bernard P. Grenfell and Dr. Arthur S. Hunt was announced at the general meeting of the Egypt Exploration Fund last November. It was nothing more nor less than the finding of new sayings of the Saviour not recorded in the Holy Bible. The papyrus containing these "sayings" was found in the winter of 1902-1903 at the site of the ancient Oxyrhynchus, which is about one hundred and twenty miles south of Cairo. In the *London Graphic* of July 17, 1897, may be seen an account of the discovery and publication of the "Logia," or "Sayings of Our Lord," and now we have the reproduction and translation of a papyrus found in 1903 (six years afterward) on the same site by the same explorers. The first manuscript was simply a leaf from a papyrus-book with the "sayings" on both sides, and, in the opinion of the discoverers, was dated early in the third century, A.D.

Although the last discovered papyrus is more fragmentary and does not contain so many "sayings" as the other, it is in one sense more satisfactory, because the sayings are introduced by the following words: "These are the (wonderful?) words which Jesus, the living (Lord) spake to . . . and Thomas, and he said unto (them), 'Every one that hearkens to these words shall never taste of death.'" Certainly this introduction is important, because it shows that Jesus was speaking to St. Thomas, and probably to another disciple, who cannot be identified, owing to the condition of the manuscript.

These new sayings have three important features: "(1) The connection with St. Thomas, as shown in the introduction; (2) the first saying, 'Jesus saith, Let not him who seeks . . . cease until he finds, and when he finds he shall be astonished; astonished he shall reach the kingdom, and having reached the kingdom he shall rest,' being found in almost the same words in the Epistle according to the Hebrews; and (3) the second saying, giving the question, as well as Jesus' answer to the same, is of special interest."

The pamphlet, "New Sayings of Jesus," includes also the sayings, or Logia found in 1897, and a fragment of a lost gospel, which may be compared with similar passages from St. Matthew's and St. Luke's gospels. "Take no thought for your life, what ye shall eat, or what ye shall drink," etc. (Matthew, 6:25, etc.), is as follows: "Take no thought, from morning until even nor from evening until morning, either for your food what ye shall eat or for your raiment what ye shall put on. Ye are far better than the lilies which grow but spin not. Having one garment, what do ye (lack?) . . . Who could add to your stature? He himself will give you your garment. His disciples say unto him, When wilt thou be manifest to us, and when shall we see thee? He saith, When ye shall be stripped and not ashamed." . . . "He said, the key of knowledge ye hid; ye entered not in yourselves, and to them that were entering in ye opened not."—*Boston Transcript*.

Disease Unfashionable.

There is a wonderful change coming over society. The world is increasing in happiness and hopefulness. Epidemics are waning and good sanitary conditions are increasing. It is no longer in good taste to let it be known that you have a chronic ailment, or are a defective in any respect. Good sound physical health is become almost a moral requisite. It must be admitted that this is a "healthy" tendency. It may be the time will come when men or women will no more admit that they are a chronic this or that, than they would lie or steal.

The dictates of fashion decreed in the eighteenth century that ladies should carry smelling-bottles, appear to be deli-

cate, and at certain prescribed times faint and remain unconscious. In George Washington's day few persons expected to live to mature age without smallpox. Two generations ago cupping and bleeding were common remedies, and the use of calomel was only limited by salivation.

There is no real necessity for sickness. It serves no good purpose of reformation or development of the individual. Without sin and violation of divine laws there would be little or no sickness in the world. While not all sickness is the result of sin, the inevitable harvest of wrong living, wrong doing, and wrong thinking is sickness, disease, and death. The Pharisees and doctors of the law accused Christ of blasphemy, because he healed a man of the palsy by saying, "Thy sins be forgiven thee." His reply was, that it was no harder to say, "Thy sins be forgiven thee," than to say, "Arise, take up thy bed, and walk." But he branded disease as the result of sin.

The thought is extending among all Christian people that disease is unnatural and health and physical harmony are the normal, natural condition. It must finally appear to all intelligent human consciousness that it is no harder to say to ourselves, Let us be well, than it is to say, Let us be moral, let us be law-abiding. Then all will enjoy health.

Salem (Ore.) Capital Journal.

When Practice is Preaching.

The very best sermon that any one of us can preach, is to practise in our daily walks before men the virtues which we declare should animate all men. In these days proofs are demanded instead of profession, and the only man that succeeds is the one who can demonstrate the views he presents to others.

Of what benefit to the world is it for one to join Don't Worry clubs, to talk cheerfulness and to preach the gospel of the denial of the power of discouragement to pull one down, if, at the same time, the one who does these things shows plainly that he is still worrying, wears a look on his face that chills and practically denies that there is any cheerfulness, and talks about the things he has to combat, "his luck," etc.?

You cannot impress upon the world that worry is needless and harmful, that cheerfulness is possible under all circumstances, and that discouragement can be downed and made to give place to happiness, unless you openly practise what you have preached upon the subject. When you do this the world believes you are honest, and so believing, commences to investigate, to finally arrive at the point of admitting the correctness of your conclusion. But you must live what you preach, else nobody will take any stock in what you profess. The demand of this day is for practice and not preaching, or rather, the demand is for that preaching which is practice and that practice which is preaching.—*Watertown (Mass.) Tribune-Enterprise*.

On Christian Science Lines.

It is among the surprising things of the times that many of the doctrinal sermons one hears and reads in these days are constructed on Christian Science lines; as also are not a few of the discoveries and deductions of speakers and writers on diseases that are looked upon as incurable, and which are subjected to the same recommendations—as to the treatment and care of the body—as elaborated in the writings of Mrs. Mary Baker Eddy and enlarged upon month after month in the magazine of that cult. It is surprising, too, that many speakers and writers seem unconscious of the ground on which they are poaching. Those who think this a broad statement and unwarranted may discover the truth that underlies it by even a cursory reading of the publications mentioned.

Nashua (N. H.) Press.

The Lectures.

Kankakee, Ill.

The large and interested audience at the Arcade Opera House, Thursday evening [March 30], listened to a scholarly lecture on Christian Science delivered by W. D. McCrackan of New York City. He was introduced by Attorney Charles B. Campbell, who said in part,—

One bright Sunday morning there came forth upon the air a beautiful chime. I listened, and as I listened I knew that this music was the sound, not of a single bell, but that it was the blending of the tones of many bells, and yet I knew that the tone of not one bell might be spared from that harmony. Each bell had an essential part, but the music was in the harmony of all the bells. This is the symphony those bells were playing, "Nearer, my God, to Thee, nearer to Thee."

And in that harmony there was revealed this truth: We have been and are becoming conscious of a symphony in this world that is pleasing to us and is pleasing to God. It is the symphony of the religious creeds of men. . . . One note in this symphony is Christian Science, and that note is producing, not discord, but sweeter music.

Kankakee Republican.

Joliet, Ill.

Hon. Clarence A. Buskirk spoke on Christian Science yesterday [April 2] in the Opera House to a large audience. Almost every seat in the house was occupied and the speaker held the close attention of the people. The address was an able and lucid explanation of the doctrines of Christian Science, and the speaker declared that the need is for practical, evidential work, and that wherever, by the ministry of Christian Science, sickness and suffering are overcome, these are the practical forms of work which carry conviction to the doubter.—*Daily Republican.*

It so happened that on the day of the lecture addresses were given in various churches in behalf of the Anti-Saloon League in Joliet, in noting which, one newspaper contained this paragraph,—

"One of the most telling arguments against the use of liquor was not contemplated by the League, when the Hon. Clarence A. Buskirk declared against alcohol in unequivocal terms at the Christian Science lecture in the afternoon."—*Correspondence.*

Fenton, Mich.

Bicknell Young spoke to a large and intelligent audience at the Opera House, Monday evening [April 3], and his exposition of the teachings of Christian Science was given the closest attention. From the lecture it is apparent that the Scientists have a most comforting and satisfactory faith, and the fact is plain that they are accomplishing much good for themselves and for the people with whom they come in contact. He was introduced by Rev. Mr. Whitford of the Methodist Church, who spoke as follows,—

It is one of the tragedies of history that discoveries in science, reforms in religion, rebirths in art, and even the unveiling of great truths have been bitterly opposed. But happily we are in the twilight, if not in the morning of a new day. The passionate search for truth, the ascending of reason and justice, and the essential glory of religion were never so emphasized as now. Men are coming to see that the life of truth, the life of love, and the life of service are the central elements of the Kingdom of God. One of the characteristics of a true disciple of Jesus is intellectual hospitality, for passion, bigotry, and prejudice are fatal to the spiritual vision.

We have with us to-night a gentleman who is here in the

interest of the denomination known as Christian Science. His belief in Christian Science is not the result of inheritance but of investigation. He has come into it by following the gleam, and so he is here as an exponent of its teachings. Personally I welcome every worker in the wondrous field of life who swings and scatters the holy incense of love and makes it easier for us to coronate our homes with purity and righteousness. Personally I welcome every advocate of the true, the beautiful, and the good. For the end of the commandment is not dogma, not ceremony, not intellectual confessions of faith formulated in the feudal age of thought, but the beauty of wholeness. The summation of all philanthropy, morality, and religion is to do justly, love mercy, and to walk humbly with God.

The Fenton Independent.

St. Paul, Minn.

Rev. Arthur R. Vosburgh of Rochester, N. Y., lectured at the Metropolitan Opera House, Sunday afternoon, April 9. He was introduced by George R. Perley of Moorhead, a member of the legislature. Mr. Perley said,—

I speak not as a Christian Scientist, for I could not claim that I have attained the realization of that truth; but I speak as a Christian believer, as one who loves truth and his fellow-men, and I speak from a close observation when I say that the message of this church seems to me only to brighten and to bless; that its followers are among the best and most Godlike men and women whom I have ever known; men and women strong in life's weak spots, serene in life's turmoil, and at once lovingly helpful and helpfully loving. Its doctrine doubtless seemed at first startling, and perhaps destructive, but press and pulpit have ere this found that opposition was as unjust as it was useless, and that Christian Science stands for human progress and the highest ideals.

The time is not far distant, nay, may be close at hand, when men shall cast aside their little prejudices and differences, level the religious walls built up too often on non-essentials, and join hands for truth as children of God and brothers in one common inheritance; when we shall know the truth, and the truth shall make us free.

St. Paul Dispatch.

Buffalo, N. Y.

Mr. Frank H. Leonard of Brooklyn delivered a lecture on Christian Science in Teck Theatre, Buffalo, N. Y., on Sunday afternoon, April 9, under the auspices of Second Church of Christ, Scientist. The audience was composed of many of Buffalo's cultured citizens with visitors from neighboring localities. The quiet, earnest attention manifested showed deep interest in the speaker's words. He especially emphasized the Christian Science teachings in regard to sin, sickness, and death, explaining them very fully and clearly, to the satisfaction of many of his audience, as repeated comments "caught in passing" testify.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Correspondence between our Leader and Third Church of Christ, Scientist, London, England.

London, April 10, 1905.

Beloved Leader:—On behalf of Third Church of Christ, Scientist, London, I am privileged to advise you of its establishment, and to express to you, in the name of its members, their dutiful and cheerful loyalty and loving obedience to the Bible and "Science and Health with Key to the Scriptures," and to you not only as the Revelator of Christian Science but as their dear friend and Leader.

I am glad to say that the interest in Christian Science is so increasing that already this hall where we meet, and which holds three hundred, is so filled as to compel us to seek larger quarters.

The large sale in our book room, of Science and Health and the other Christian Science literature fills us with gratitude. Knowing how you rejoice over every good work, we feel that your blessing is with us.

Faithfully in truth and love, yours,

ARTHUR FIRTH, *Chairman.*

To the Rev. Mary Baker G. Eddy.

MRS. EDDY'S REPLY.

Third Church of Christ, Scientist, London, England.

Beloved Brethren:—Love and unity are hieroglyphs of goodness, and their philosophical impetus, spiritual Esculapius and Hygiea, saith, "as the thought is, so is the deed; as the thing made is good or bad, so is its maker." This idealism connects itself with spiritual understanding, and so makes God more supreme in consciousness, man more His likeness, friends more faithful, and enemies harmless.

Scholastic theology, at its best, touches but the hem of Christian Science shorn of all personality, wholly apart from human hypotheses, matter, creed and dogma, the lusts of the flesh and pride of power. Christian Science is the full idea of its divine Principle, God, forever based on Love and demonstrated by perfect rules; it is unerring; hence, health, holiness, immortality are its natural effects. The practitioner may fail, but the Science never.

Philosophical links that unite dead matter with animate, Spirit with matter and material means, prayer with power and pride of position—hinder the divine influx, lose Science, the Principle of divine Metaphysics, and the tender grace of spiritual understanding, that love-linked holiness which heals and saves. Schisms, imagination, and human beliefs are not parts of Christian Science; they even darken the discernment of it; they divide Truth's garment and cast lots for it.

Seeing a man in the moon; or seeing a person in the picture of Jesus; or believing that you see an individual who has passed through the shadow called death,—is not seeing the spiritual idea of God; but it is seeing a human belief which is far from the fact that portrays Life, Truth, Love.

May these words of the Scriptures comfort you:—

"The Lord shall be unto thee an everlasting light, and thy God thy glory." "The city had no need of the sun, neither of the moon, to shine in it: for the glory of God did lighten it, and the Lamb is the light thereof." "Ye

are a chosen generation, a royal priesthood, an holy nation, a peculiar people; that ye should shew forth the praises of him who hath called you out of darkness into his marvelous light." "Giving thanks unto the Father, which hath made us meet to be partakers of the inheritance of the saints in light: who hath delivered us from the power of darkness, and hath translated us into the kingdom of his dear Son." "Ye were sometimes darkness, but now are ye light in the Lord: walk as children of light."

Yours in Christ,

MARY BAKER EDDY.

Pleasant View, Concord, N. H., April 28, 1905.

The May Class in the College.

Boston, Mass., May 5, 1905.

Rev. Mary Baker G. Eddy.

Pleasant View, Concord, N. H.

Beloved Leader:—The May, 1905, primary class of the Massachusetts Metaphysical College—that institution which your wisdom has founded and fostered for our spiritual advancement, and now in session within the hallowed precincts of The Mother Church—sends you loving greetings. If, dear Leader, one word alone were to go to you from us to-day, it would be the word Gratitude,—gratitude to God, and to you, the messenger of Christian Science to humanity, for the sacred privilege of the instruction we are receiving at this time.

To us, as students of the Bible and "Science and Health with Key to the Scriptures," your God-given mission is being unfolded, and we understand better your great gift to humanity. Our love and tenderness for you are augmented by a knowledge of the burdens you have borne and your Herculean accomplishments. We comprehend better than ever before the selfless love, sublime patience, and fortitude, that have enabled you to do so great a work. There is imparted to us the deeper meaning of the Church, and why you love it in its work of Christian healing, and we are also awakening to a greater sense of consecration. We have a clearer perception of the religion of Jesus the Christ, and a greater desire to be purified, that we may be worthy of the name Christian Scientists.

We love you, and recognize in you our Leader and spiritual Guide. Our united prayer is that God's blessing may bring to your human striving for the establishment of His kingdom on earth, inflowing grace sufficient for your life-work, and may we ever be actively loyal to you, to our Cause, and to the Christ-principle in our service to mankind.

Gratefully,

MARY L. HOOPER, Connecticut,
JESSIE B. COOPER, Missouri,
LOUISE D. RADZINSKI, Delaware,
PRIESTLY HALL, California,
WILLIAM L. POST, Delaware,

Committee.

MRS. EDDY'S REPLY.

Concord, N. H., May 6, 1905.

Students of the Massachusetts Metaphysical College.

Beloved:—I am glad you enjoy the dawn of Christian Science; you must reach its meridian. Watch, pray, demonstrate. Released from materialism, you shall run and not be weary, walk and not faint. MARY BAKER EDDY.

Preparation.

We are frequently asked to write something in the nature of advice regarding the selection of Readers in the branch churches, but we do not feel that it is within our province to do this, and if it were, we should be more than doubtful of our ability to decide questions which seem to tax the best thought of those to whom this problem is of immediate concern in connection with their individual work. We

believe, however, that the repetition of an editorial which appeared in the *Sentinel* of December 25, 1902, will help some of the branch churches whose Readers' term of office will shortly expire, and we therefore republish it as follows:—

"We are informed that some of the smaller churches, when electing new Readers, have been impressed with a lack of available material within their own ranks, and have felt compelled to draw upon other fields, a condition that should not exist after three years of active public work. The principal lesson to be drawn from this seeming lack of material is that there is need of more specific as well as more general preparation for every branch of Christian Science work. While the healing of the sick is the most important and convincing evidence of the truth of Christian Science, there is other work which must be performed by those who have the welfare of our Cause at heart.

"Christian Scientists, in these early days of denominational growth and expansion, should realize that the call, 'Follow me, and I will make you fishers of men,' may come to them at any moment, and they should be prepared for it. No matter how small in membership a church may be, nor how limited the experience of its members in public affairs, it should have within itself material for all its needs. For the same reason that Christian Scientists should be ever ready to heal the sick, they should be ever ready to preach the gospel. Neither can be properly done without earnest preparation and diligent study. Those without training for public work of this character, should know that it is never too late to acquire the necessary preparation.

"Another phase of the question, which must be carefully considered, is the danger of creating within our ranks a certain class who would, in time, come to be looked upon as professional Readers. It does not seem that the establishment of such a class could be conducive to the growth of those comprising it, nor to the growth of the individuals who would be relieved thereby of the necessity of qualifying themselves for this work within their own field."

ARCHIBALD McLELLAN.

Law gives Freedom.

STUDENTS of Christian Science are often asked if they believe that law can be set aside, as, for instance, in the healing of those diseases which, in medical opinion, are invariably fatal, according to ordinary human experience. Before this question can be satisfactorily answered, it is necessary to consider what is the meaning of the term law. It is very generally defined in the dictionaries as "a rule of being, or operation, so certain and constant that it is conceived of as imposed by the will of God or by some controlling authority." While this definition would probably be accepted as correct by the majority of thinkers, the widest possible differences of opinion exist as to the "operations" which should properly be classified as laws. The most advanced thinkers along the lines of physical science are agreed that so-called material laws are only processes, not powers; and one writer says, "That they have any absolute existence even, is far from certain."

No one would deny that during the last thirty or forty years many of the limitations imposed by the belief in supposed physical laws have been set aside by the wonderful discoveries which tell of the liberation of human thought and mark the pathway of progress. Really, law stands for freedom, not restriction, and, rightly understood, makes ever for good, not evil. The materialistic concept of law, however, is a concept of something which is certainly no less actively manifested in evil than in good; as a destructive, no less than a constructive, mode of operation.

Christian Science wholly sets aside this concept, in its teaching that law is inseparable from the lawgiver, God, who is at once Love and intelligence. (See page 258, Miscellaneous Writings by Mrs. Eddy.) The nature of the human

concept of law, in its relation to health, makes it clear that the ever-presence of the Divine lawgiver is not taken into account, for the so-called health laws are really disease laws,—beliefs which impose no less severe penalties for doing good than are those meted out to criminals. In Christian Science we learn that the attributes of God—justice, wisdom, mercy, and goodness—are inseparable from His laws, and that there is but one lawgiver. In the light of this teaching we understand how the false, material sense of law was annulled by Christ Jesus in his wonderful healing works, and through this understanding we may join in St. Paul's triumphant declaration, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." That which expresses Life, and which gives life, is law; that which is expressed in disease or other evils is not law, though it may, up to a certain point, counterfeited the order and continuity of law. Of this false concept we may well say, "I am dead to the law, that I might live unto God."

A little Christian Scientist once said of her school teacher, "She keeps me busy breaking the laws of sickness which she is making for the children in our room." Later, the teacher saw, through Christian Science, the wisdom of setting free the children under her care from those meshes of mortal belief too long dignified with the name of laws. In Christian Science we come to appreciate and endorse the apostle's words, "Whoso looketh into the perfect law of liberty, and continueth therein; . . . this man shall be blessed in his deed."

ANNIE M. KNOTT.

Letters to our Leader.

Brooklyn, N. Y., April 30, 1905.

Reverend Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Teacher, Leader, and Guide:—We, the united members of First Church of Christ, Scientist, at our first public service, send you loving greetings and heartfelt thanks for your words of admonition, encouragement, and love. "Progress is a law of the Infinite" and "takes off human shackles," as our text-book declares, therefore we have reached the point of our present demonstration through the answered prayer of sincere desire to be your true followers. We realize the necessity for continued watchfulness and self-sacrifice, until the goal of perfection is won and our debt to infinite Love fully canceled.

We shall earnestly strive to let our efforts as a Church express to the world the efficacy of a healing religion, and our gratitude to you for showing us the way and the Mind of Christ. Your unselfish adherence to Principle and unceasing effort to uplift humanity, is being rewarded in the many evidences of awakened consciousness. The pattern given on the Mount, and your example, are before us, and in humility, chastened affections, and love, we consecrate ourselves anew to God and to the advancement of His kingdom on earth. This is one of the deeds that rejoice your heart, and our prayer is and shall be that we may continue in such deeds, thereby showing a lasting and satisfying gratitude which shall be an example to all mankind.

Accept our grateful thanks for your years of work and achievement, which are enabling us to work out our salvation. The members and friends assembled arose to their feet in reverence and love while your dispatch was being read.

Faithfully and lovingly yours,

EMILIE B. HULIN, C.S.D.,

FRANK H. LEONARD, C.S.B.

Committee.

When this letter reached the *Sentinel*, it bore the following comment in the handwriting of our Leader:—

"I have loved thee with an everlasting love: therefore with lovingkindness have I drawn thee." Jeremiah, 31 : 3.
Yours in Christ.

MARY BAKER EDDY.

Sandusky, O., February 27, 1905.

Beloved Leader:—"Out of the abundance of the heart the mouth speaketh." And surely it is out of the "abundance of the heart" we write these few facts to you, feeling that they will give you joy. We have a church of forty-five members; new members have been added at each Communion service, and we have a constantly increasing congregation at both the Sunday and Wednesday evening services.

The members are faithful students of the Bible and Science and Health, and study daily the Lesson-Sermon. At Thanksgiving time it was decided to send our own church building fund to help build The Mother Church, this being our third contribution. It was also voted to send one tenth of our monthly collections until the completion of The Mother Church, and we have realized how blessed it is to give. On January 8, Hon. Clarence A. Buskirk delivered a lecture to an audience that completely filled the hall. The lecture was productive of great good, and awakened the thought of many to turn to Christian Science. There has been much good healing done, and done quickly. During the past year there have been sold over four hundred dollars worth of Christian Science literature in our reading room, and from January 1, 1905, to February 22, there were sold sixteen copies of Science and Health. Last quarter we sent for eighty copies of the *Quarterly*; this quarter we send for one hundred copies. We have placed Science and Health in the library, the jail, soldiers' home, and infirmary, also the *Sentinel* and *Journal*. We are striving daily to show our love and gratitude to you, our dear Leader, by trying each day to live more earnestly in obedience to your wise and loving counsel, to be humble, loving, and watchful.

Yours with great love,

MRS. MARY PHILBRICK MARBLE.

First Reader.

Our Leader has endorsed on the above letter:—

You, my beloved brethren, have earned the reward that God giveth, and has promised in the Scripture:—

"Well done, thou good and faithful servant: thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy lord" (Matthew, 25 : 21).

With love, yours,

MARY BAKER EDDY.

The Hague, Holland,

Mauritskade 6, February 12, 1905.

Dear Mrs. Eddy:—It may interest you to know how Christian Science has spread and is rapidly extending throughout this little country, and that it is a source of rejoicing, not alone to the few of us whose native tongue is English, but also to a far greater number to whom the English language is a foreign tongue. The history of our Christian Science Association here is nothing extraordinary, simply a repetition of what has occurred in very many centers, and yet it may please and cheer you on in your blessed work to hear the old familiar story once from a foreign shore.

In 1901 an American resident in The Hague brought back from America "Science and Health with Key to the Scriptures," and after a hasty perusal, passed it on to a German lady, who had expressed a desire to read it. This lady was joined in her subsequent perusal of the book by a Dutch lady, and together they met every week to study its contents. A third lady joined them within six months, then the American lady assisted at their gatherings, and in the course of about a year eight ladies, one German, five Dutch, one English, and one American, met regularly every Monday evening at the house of the first-mentioned German lady, to drink tea, read "Science and Health with Key to the Scriptures," and in their own way go through the lesson for the week. Towards the end of the second year, the German lady saw in *The Christian Science*

Journal the name of an American practitioner who was on a visit in The Hague, and asked her to join the weekly gatherings. Her visit was looked upon as a boon, as she was able to tell from experience how grand a work was going on in the United States, and to direct attention to the authorized literature as an aid in the study of Christian Science, and, moreover, she was able to set this little company right as to the manner of conducting their reading of the Lesson-Sermons. A further impulse to the movement was given by the English lady's attendance at First Church of Christ, Scientist, in London, where she and her husband witnessed the blessed influence of Christian Science at the crowded gatherings in the Bryanston Square meeting-place. The American lady, after a visit to the United States, brought still more encouraging tidings.

The number of attendants at the weekly gatherings in The Hague steadily increased, and in 1903, when twelve or even fourteen of us met in a drawing-room, the accommodation proved too small, and it was decided to hire rooms for our meetings and hold regular services every Sunday morning. At this time, October, 1903, we were at most fifteen persons. In October, 1904, we held our first annual business meeting, when the treasurer's report showed that there was a surplus in hand which warranted our hiring the greatly needed third room adjacent to the two we had rented. Instead of fifteen persons, as we had started with in October, 1903, our number had grown to more than twenty-five. At the present date there are seldom less than forty persons at our Sunday morning gatherings; our rooms are rapidly becoming too small, the weekly (twice a week, Monday and Wednesday) calls at the reading room, and the demand for Christian Science literature, keep the librarian and committee constantly occupied. Our testimony meetings, on the last Sunday in every month, are most cheering to us all.

Among numerous overcomings of error demonstrated through Christian Science in The Hague, one of our number, an art student, who wore glasses and was very short-sighted till her twenty-sixth year, has dispensed with the glasses entirely; another of our number has proved the truth in the complete restoration of her child from a serious affection of the lungs, which three doctors said must shorten the child's life and prevent her attendance at school; and we have been blessed in seeing a young lady, whom the doctors sent home to die in the last stages of so-called consumption, restored to perfect health and strength. We all rejoice in the blessings brought about by the line of life you, through God's grace, have pointed out to us. Gratefully would we join in the chorus, "Glory to God in the highest, and on earth peace, good will toward men."

With affectionate greeting from a thankful, happy band of Christian Scientists in Holland, I am, dear Mrs. Eddy, Faithfully yours,

I. I. HELSDON RIX.

Hon. Secretary of The Hague Christian Scientist Association.

The Communion and Annual Meeting.

ARRANGEMENTS are being made with the railroads for reduced rates to Boston on the occasion of the Communion and Annual Meeting of The Mother Church, June 25, 27. Persons who wish to avail themselves of these rates should obtain information from their local ticket agents.

The usual arrangements for the convenience and comfort of visitors while they are in Boston, will also be made.

Notice to Branch Churches.

The branch churches which have not responded to the call made in these columns, to send to the Clerk of The Mother Church a statement of their membership as it appeared on their books April 1 of this year, are requested to do so at once.

Testimonies of Healing.

Three years ago I was forced because of ill health to close my office in a neighboring city and return home. During the journey I met a clergyman with whom I enjoyed a long conversation, in the course of which he told of a recent call to the bedside of a suffering parishioner who believed that her physician was unable to cure her, and deriving no benefit from medicines, had appealed to her pastor to help her by prayer. His reply was that she needed the three P's, — pills, powders, and prayers. At that time my traveling-bag was at least half full of drugs and material remedies of various kinds which I systematically used, and for three years I had earnestly prayed to God to relieve my suffering; literally entering the closet of my room and on bended knees uttering my petitions, but during these three years I had gradually grown worse, until it then seemed as if all hope was gone; for coupled with impaired health was the inability to transact business.

The three Ps,—"pills, powders, and prayers!" For a few minutes I pondered the logic of this remark and then asked whether the pills and powders added efficacy to the prayers, or whether the prayers assisted the drugs, and were they both essential to recovery. If that were true, I should be exempt from suffering, because I had a complete stock of medicines, the best medical treatment, and many sincere and loving prayers had been offered for my recovery by several devout and spiritual-minded friends. My sufferings were, however, becoming almost unbearable. All this I told to my acquaintance, and his answer was, that he who had suffered most in this world was also the most beloved of God. That night I tried more earnestly than ever before, to become reconciled in patient obedience to what I supposed to be God's chastening.

A few days after arriving home it was suggested that I try Christian Science treatment, because it offered hope. The first day that I called upon a practitioner I knew that I should be well again. For some time I had been convinced that material remedies were ineffectual, but never had I doubted the ability of prayer to heal, if the prayer could but come from one near enough to God to be a proper channel for His healing love. I then saw that the practitioner knew God and prayed to Him in a way unknown to me, for her prayer was the effectual, fervent prayer which resulted in a remarkable recovery. After only a few weeks of treatment I again resumed business, and have not since then missed one hour because of sickness, nor sought other help at any time than that which comes from God,—the help attained through Christian Science.

My gratitude for Christian Science and all the good which has come into my life through this Christ-teaching cannot adequately be expressed by words. It demands expression through daily living.

PORTER BOLLES JORDAN, Roxbury, Mass.

[Translation.]

Seven years ago I was invited to attend a Christian Science meeting. It then seemed to me that it could not be worth while to sit there for one whole hour and listen to this teaching, because I had read many malicious criticisms intended to warn people against that false doctrine (as it was called); and I had believed them to be true. Therefore I did not consider it advisable to look into Christian Science. Yet God's ways are higher than our ways, and Jesus said, "No man can come to me, except the Father which hath sent me draw him." After due consideration I decided to attend a Christian Science meeting, to see if I could not obtain help for my eldest daughter, then sixteen years of age. She could hear but very little and could not speak. She was therefore in a deaf-and-dumb institution, where she was taught to read and write.

In September, 1897, I attended an experience meeting for the first time, and with an earnest desire to seek the truth, I silently prayed, "Create in me a clean heart, O God; and renew a right spirit within me." God granted my prayer, and He has given me what I then asked for. I attended every testimonial meeting, although I could not then understand English, for I was happy there. I still attended an evangelical church on Sundays, where I had been a member for many years. I believed I could attend both, but soon found out that I could not "put new wine into old bottles." Jesus said, "I am the way, the truth, and the life; no man cometh unto the Father, but by me."

Before coming to Christian Science, I had often asked myself, Where is the way? What is truth? What is life? Luther said of the Bible, "Thou holy book which God has given me, thou art ever dear to me; here is the way to true life . . . here God speaks." Yet I must confess that I could not comprehend the Bible, and could not understand it as the Word of God. After having attended the Christian Science meetings several times, I bought Science and Health, and began to study that wonderful book, although it at first looked as if it were almost impossible for me to understand it. I bought a dictionary and began to translate each word. I prayed to God for light and understanding, and I have been richly blessed. I tested the little that I learned and had wonderful results. I learned that God is all-power, all-presence, all-knowledge, and His strength is mighty in the weak. I also found that Science and Health is indeed the Key to the Scriptures, and I can now truly prove what Luther said, "Here is the way to true life." Thus I put my hand to the plow and did not look behind. I took one step after another. After I had studied Christian Science for eight months I withdrew from membership in my old church. In December, 1898, I became a member of a Christian Science church in our city and I am now a member of The Mother Church in Boston. The *Christian Science Sentinel*, *Journal*, and *Der Herold der Christian Science* bring to me "the leaves of the tree" which is "for the healing of the nations."

I have had many opportunities to help my neighbors, to free them from physical diseases and to bring them the understanding of truth. I am now always busy in God's vineyard, and ready to work for mankind. In my own family, we have overcome cases of scarlet fever, St. Vitus's dance, sore throat, and severe rheumatism; also inflammation of the bowels and the liver, and many other diseases to which flesh is heir. Every trial was a test for me and has strengthened my faith.

I thank God with all my heart for having revealed to us the way to Life through our faithful Leader, Mrs. Eddy. I hope that all who think it impossible to study Christian Science, because they do not know the English language, will accept this testimony as an encouragement. Paul said, "I can do all things through Christ which strengtheneth me." I wish to add that my eldest daughter's condition is much improved. Her hearing is much better, and her faculty of speech also. She attends the Christian Science church and is sincerely grateful for Christian Science, which has enabled her to work industriously. She has through this Science become a useful member of the human family.

Words fail me to express the gratitude I feel to our Leader, Mrs. Eddy, and I also desire to express my gratitude for *Der Herold der Christian Science*, which is bringing the truth to German-speaking people.

FRAU CAROLINE BECK, Buffalo, N. Y.

I desire to tell of a demonstration that occurred in our home which certainly proves that God is an ever-present help in time of need. One evening when my mother was preparing for bed, she was taken with a cough, but we did not give any attention to it. At half past eleven she called me. At that time she could scarcely speak above a whisper,

and her breath came with difficulty. The cough was much worse and gave unmistakable signs of croup. We did the best we could with the little understanding of Truth that we have, when suddenly my mother seemed to lose her mind and did not understand anything. It was then that I sent for my father, who is a night-watchman in a factory, and I also telephoned to a practitioner for help. Strange as it may seem to some, it is nevertheless true, that in less than fifteen minutes she was in her right mind and much improved. She gained so fast that when my father arrived, in about a half hour, she was breathing easily, and the cough had nearly disappeared. In two hours and a half she went to bed and rested until morning. The next day she performed the usual household duties, and the following day attended the regular Sunday services. We are truly thankful to God, and grateful to Mrs. Eddy, through whom this truth has come to the world.

L. E. SHAFER, Niles, Mich.

The testimonies in the *Sentinel* have helped me so much that I thought I would give mine, in the hope that it might meet the eye of some unfortunate brother who has not yet been led to the right understanding of God as taught in Christian Science. I was an awful wreck, being a slave to rum for twenty years. I was in fact so far gone that my father advised me to take a well-known "cure" for drunkenness, which I consented to do. I took this treatment, and I was just as bad when I came out of the institution as when I went into it. This was about seven years ago. Seven months ago kind friends advised me to try Christian Science, which I consented to do, yet I was adverse to Scientists, insomuch that I said to my wife that if I had my way I would have all the Scientists hung or put in jail. Little did I think that five months later I would be healed of that awful disease through the same Christian Science which I had condemned. I cannot be too thankful to God for this blessed hope we have through Christian Science, and to our dear Leader, Mrs. Eddy, who was inspired by God to find the blessed truth; and never shall I forget the dear friends who led me to see the truth and who so kindly stood by me in my darkest hour. Now I have not the slightest desire for intoxicating drinks, and only those who have been placed in the same position can realize how thankful I am to-day for the truth which has set me free. This is not all, however, that Christian Science has done for me. My little son had fits for years, taking spells every few weeks, and he would remain unconscious for four or five hours at a time. I had the very best physicians, but they could give me no hope of his ultimate recovery. Since I have accepted Science he has been cured also. He has not had a single fit in seven months. But this is not all; my wife, who was nearly blind, was given no hope by three of the best specialists in New York City as to her eyes getting any better. They told her that she must stay under their constant care, but as I was obliged to move to another city this could not be done. Now she can see better every day and is trusting to the truth which sets free.

I wish to add that my boy ran a nail very nearly through his palm, and the hand began to swell to an enormous size. The pain went up the arm and down to his side. It seemed to be a clear case of blood-poisoning, and my wife, who is a member of the Christian Science church here, treated him. For two days he was in extreme agony; the third day the demonstration was made, and on the fourth day he was back to his business. His employer, who saw his hand on the second day, said to me, "Do get a doctor, or your boy will lose his hand." I told him that divine Love had always met our need and would meet this. He was a greatly surprised man when the boy returned to his work. He could only say that it was a wonderful thing. My wife slipped on the ice, last winter, striking her head very severely. She seemed to be injured internally, but she

at once declared the truth, and she never lost any time in consequence of it. We have had many other demonstrations and are all very thankful that we have been led to this blessed truth. It has transformed this home of ours to a heaven on earth.

Every day of my life I thank God for revealing His wonderful truth through our noble Leader, Mrs. Eddy, and I am learning day by day the truth of those blessed words of our Master, "Lo, I am with you always, even unto the end of the world."—LOUIS C. MASTER, Norristown, Pa.

As a child I was brought up amid the orthodox surroundings and careful teachings of a New England home. A somewhat extended opportunity for "seeing the world" did not shake the fundamentals of home teaching, but an early freedom to "pick and choose my way" induced me largely to seek the gratification of the physical senses, rather than any higher aims. My experience was not at all unusual, until I commenced to suffer severely from rheumatism in the feet, a difficulty which failed to yield to medical treatment applied faithfully throughout three years. After a particularly discouraging siege, Christian Science treatment was warmly recommended, and I called on a practitioner, more to please the one who had suggested it, than in the hope of benefit; in fact, I assured the practitioner that from my mode of life and attitude towards religion it was not to be presumed that her agency could be applied in my behalf, as she evidently operated from a religious standpoint. After I had placed myself under treatment, this faithful practitioner "showed me the way," and after three weeks' treatment I found myself entirely well. This healing took place over seven years ago, and I have had no return of the trouble.

My healing was altogether surprising to me. In fact it awakened more surprise than any other emotion at that time, —but soon came the desire to know more, to learn something of "the why and wherefore" of these results. I immediately commenced the reading of "Science and Health with Key to the Scriptures" by Mrs. Eddy, as well as her other writings, and I have never ceased to study them since. During the intervening years Christian Science has proven entirely adequate in healing all the sicknesses and disorders which have appeared from time to time, and the truth revealed in Christian Science has been my only source of relief. Material remedies were discarded at the time of my first healing by Science, and I have never resorted to the use of them again. The study of this truth, and the acceptance of its teachings, have wrought most decided changes for the better in my opinions, habits, and morals. I count the understanding of Christian Science to be my greatest blessing, and it is in grateful acknowledgment of abundant blessings that I take this opportunity to express my gratitude to God, the "giver of all good"; and to our beloved Leader, Mrs. Eddy.

HARRY A. BABB, Chicago, Ill.

Our Master said, "I am come that they might have life, and that they might have it more abundantly." I had often read those words, but never dreamed that I should experience the more abundant life promised. Brought up in an orthodox church, I had learned to love it, and took an active part in its work, yet, from childhood, I had what the physicians called an incurable disease. When the last one consulted said that he could help, but not heal me, I prayed earnestly to die, though I always added, Not my will, but Thine, be done. I was invited to a friend's house to stay all night. Her mother was a Christian Scientist, and I was curious to know what Christian Science was, but was ashamed to ask before my friend, so I waited until she went out of the room. I then turned to her mother and said, "Do you suppose that Christian Science could heal me?" She assured me that it could, and treatment began that night. This was almost eight years ago. My

healing seemed very slow; I was looking only for physical help, but gradually the light began to shine into my darkened consciousness, and through the constant study of Science and Health and the help of a dear practitioner, I realized one night my true relationship to God. The old fear rapidly diminished, and for days and weeks my heart was singing, "Glory to God in the highest." But this is not all. When I began studying Science and Health I was teaching school, a work which I did not find at all pleasant, as there were so many things daily to try one's temper and patience. It seemed like up-hill work and I found no way out of the difficulty until I learned that whatever work we are doing, though it be the lowliest task, we should seek to love it.

My daily prayer is one of gratitude to God, to the great Wayshower, and to our Leader, Mrs. Eddy, for the truth found in Science and Health, and for this abundant life that radiates light to all those around us.

MARY E. NEWTON, Cincinnati, O.

Last spring, while working in the chemical laboratory of The Sheffield Scientific School at Yale University, I met with an accident which at the time seemed to be of a very serious nature. A bottle, holding oil of vitriol, concentrated nitric acid, and hot alcohol, exploded unexpectedly, covering my whole face with its contents, and almost blinding me. I washed it off as quickly as possible, declaring the truth mentally while doing so. A practitioner was immediately notified of the accident, and with his help and my own small understanding the work of healing began. My face seemed at the time as though it were being consumed by a terrific heat, and for a few minutes the pain was intense. In an hour, however, all sense of suffering had vanished. The next day the skin became dry as parchment and shrivelled up. Two days after that it began to peel off like so much paper, and within a week the condition of my face was normal again and without a scar. This healing, although not instantaneous, was so remarkably quick and complete that many of my college friends noticed it, and expressed their surprise that such a cure could be effected, especially without the application of any material remedy.

The experience emphasized in my mind the importance of meeting error immediately with the declaration of the real man's perfect harmony and his oneness with "God, the Giver of all good." This is but one of the many proofs I have had of the efficacy of Christian Science as a healing power, but higher, farther-reaching, and more satisfying than this physical healing has been the sense of peace and happiness which has succeeded it.

DILWORTH R. LUPTON, Pittsburg, Pa.

I have been impelled for some time to write of my healing, thinking that some one might be benefited thereby. I suffered with dyspepsia and nervous prostration for years. I tried ten different physicians, one of whom said I would go out of my mind. I became despondent and discouraged. I felt myself sinking in despair, longing for death, and thinking this would be a relief. It was in this dark hour that Christian Science came to my rescue. A friend loaned me a copy of *The Christian Science Journal*, and by reading it I was helped. I read in it about many being healed by studying "Science and Health with Key to the Scriptures" by Mrs. Eddy, and I bought this book. In less than three months I was healed by reading it. When first I heard of Christian Science, I heard it was a terrible religion. I believed that the spiritual part was all right, but said it would take a two-edged sword to get me to see into the healing; not knowing, at the time I was talking, that Christian Science is the Word of God which does separate error from truth. My friend asked me if I would like to go with her to the Christian Science church. I said, "Yes, I will go; but if they do not read the Bible I will not stay." There and

then it was proved to be the religion of Jesus Christ. My heart was soon overflowing with gratitude that I had found a God of Love who does heal from both sin and sickness. I am grateful for the many blessings that have been brought into my life; every breath I draw I owe to Christian Science.—ELLEN SHERWIN, Port Hope, Ont.

With the hope that it may give encouragement to some suffering one, I send my testimony for publication. After enduring the most intense suffering for more than a year, and having consulted several eminent physicians, and also taken treatment from them, I was finally told that I could hope for relief only by submitting to an operation, which I finally decided to do. This was in March, 1903. The surgeon, however, after making an incision, found that he could not operate, as my trouble was cancer of the liver,—something altogether different from what the physicians as well as the surgeon who had already diagnosed the case had said. Consequently, they told me that they could not do anything more for me except to administer morphine to relieve the pain, and they intimated that I could not live more than a few weeks at the longest and might drop off at any time.

After continuing in this condition for some time, gradually getting weaker, the spasms returning more frequently, and seeing that there was no hope for me from any material source, I was led in my extremity to turn to Christian Science for help. Although my recovery was somewhat slow, yet I gradually improved from the first treatment, and to-day I am in the enjoyment of perfect health, and have been helped spiritually as well.

I am very thankful to my heavenly Father who gave me help in the time of my great need.

W. PICKARD, Mt. Forest, Ont.

Christian Science has done and is doing so much for me that I feel I must express my gratitude, not only to God who has given us this wonderful gift, but also to our beloved Leader, Mrs. Eddy. Seven years ago I was healed of consumption and neuralgia. I have also found Christian Science of great benefit while having some dental work done. I had one tooth extracted, and another crowned, without discomfort or pain. I feel very grateful for all these physical benefits, but they are not to be compared to the spiritual blessings that have come to me through the study of the Christian Science literature. I live on a farm, five miles from any other Christian Scientist, but in all these years I have proven God an ever-present help, just as the Bible teaches. The Christian Science literature is very precious to me. My earnest desire is to gain more of the understanding of Christian Science, which is to me the way of peace.

MRS. E. A. BARTHOLOMEW, Thomas, Mich.

New Reprints.

The following articles which have appeared in the *Journal* are now issued in the form of Reprints: "Christian Science and the Business Life," "A Protecting Religion," "The Christian Science Text-Book" (in German), "Service and Stipend" (in German).

They will be sold at the regular prices, which may be found in the advertising pages of this issue of the *Sentinel*.

Notice.

The next admission of candidates to membership in The Mother Church will be June 6, 1905. Applications must be in the hands of the Clerk on or before May 15, 1905.

An application sent to the Clerk of the Church does not constitute the applicant a member; he must be elected to membership by the Christian Science Board of Directors, in which event notice of election will be sent.

From our Exchanges.

"A new evangelism," is the hunger-cry of half-fed Christianity, bending above the world-cradle of to-day. Starved upon husks of dead, tough theology and still doubtful of the new crop corn-in-the-ear; mocked by the brazen make-believe of conformity and opportunism; dazzled by the sumptuous parade of more than Magian splendor in the stable chamber of the lowly Babe of Bethlehem; sick of soulless ceremonial and other counterfeit sanctities; appalled by the encroachments and pretensions of materialism in many masks; distracted upon beholding her noblest activities barred from the sanctuary and turned over to the nursing of outside societies and movements unfettered by regime; desperate at last to get back and close to the breast of her Lord; the Church is finding speech to proclaim her longing for a real life and a real part in the world's work.

REV. C. ELLWOOD NASH, D.D.
The Universalist Leader.

Jesus never waited for men to repent before he offered them his friendship. He never waited for men to come half way before he went to meet them. The fact that this rich reprobate, Zacchæus, was curious to see him gave him all the opportunity he asked for; and he seized it. The sequel justified his action. Startled by honor in a place where he had met before only envy for his wealth and indignation for his rapacity, Zacchæus promised to restore fourfold to those he had robbed, if he could find them, and to give half his remaining fortune to the poor. But this repentance did not precede, it followed, the honor Jesus did to him. Jesus lodged with Zacchæus not because Zacchæus had repented; Zacchæus repented because Jesus lodged with him.—*The Outlook.*

Sin is the consciousness of the distance between one's ideal and what he knows he is, and it is keen in proportion to his longing to realize his ideal. Repentance grows deep and keen as we see in one whom we love what in our best moments we want to be, and learn that he loves us for what we can be and that he would give us strength to be what he would have us be. Personal religion is realizing one's best possibilities. Christianity is finding one's ideal in Jesus Christ and doing his will in loyal devotion and clinging to him in growing love.—*The Congregationalist.*

"Moses wist not that the skin of his face shone." Yes, and in this he is type of all greatness of soul. No saint ever saw his own halo. Self-consciousness vanishes in the measure of our approach to and identification with the Universal Life, which is God; and, as in lowly self-surrender we become His glad agent and instrument for high and holy ends, "He builded better than he knew" is true at last, I suspect, of all high power and accomplishment.

REV. FREDERICK L. HOSMER.
The Christian Register.

In Jesus both words and deeds were found, as the record narrates all that he began both to do and to teach. No Christian service is complete unless it speaks the language of the heart in words and expresses the weight of character in deeds. Actions speak louder than words because they are the expression of the whole man, and make an impression of reality.—*The Watchman.*

When we have vigorous intellectual fighting, we bring about inevitable social changes rationally, peacefully, constructively. When men become intellectual and moral cowards, the day when the sword of steel must be unsheathed is not far distant.—*The Independent.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

Pamphlets

LEGAL ASPECTS OF CHRISTIAN SCIENCE. A compilation of Court Decisions, Opinions of Lawyers, etc. 72 pages.

MR. KIMBALL'S LECTURE. 33 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the *Journal*. 40 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 23 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German. 31 pages.

Price. One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . \$5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

s for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

President Roosevelt returned last week to Washington after completing a trip that covered 6,006 miles and took him through twelve States and three Territories. The trip was marked everywhere by the heartiest demonstrations. In Chicago he stayed about twelve hours. At his reception at the Merchants' Club his address touched upon the Navy; at the Harvard Club, of the desirability of the West winning Harvard; at the Hamilton Club, where the foreign consuls were present, he eulogized Hamilton; at the Iroquois Club, the leading Democratic organization of Illinois, he was received with great enthusiasm. In his address he clearly stated the intention of the Administration to push the matter of railroad rate regulation. The tenor of this address at Chicago was also followed in the address of Secretary Taft at Washington before the International Railway Convention in session there last week.

While coming up the coast recently, off Cape Henry seven United States battleships raced for eight hours. The Missouri finished first, covering 126½ miles in that time. The others followed in this order: Maine, Kearsarge, Kentucky, Iowa, Massachusetts, and Alabama.

It has been announced that Andrew Carnegie has offered to Radcliffe College the sum of \$75,000 for a library building on condition that an equal sum shall be raised among alumnae and friends of the college for endowment of the library.

The start of the eleven yachts contesting in the ocean race for the "Emperor's Cup," which were to have gotten away on the 16th, was postponed because of thick weather.

By a decisive vote of fifty-seven to five, the faculty of the Massachusetts Institute of Technology disapproves the proposed Tech-Harvard merger.

Foreign.

A report says the Bouligan Commission, appointed in view of the Imperial rescript of March 3, recommends the creation of a council of zemstvos, elected indirectly through the zemstvos to serve as a connecting link between the Emperor and the people.

Emperor Nicholas is said to have accepted the report of the commission, and the date of its proclamation has been tentatively fixed for May 18. The main features of the reported scheme are an organization comprising from 500 to 550 members elected by the zemstvos, the zemstvos system being extended to all parts of the empire, while the autocratic power of the Emperor will remain undiminished, the assembly's privileges being advisory with the right of interpellating the ministers and discussing the budget when formulated, though the ministers continue to be responsible only to the Emperor, whose will will remain the supreme law. Elections will be held during the summer in order that the first session of the new assembly may open on November 15.

A sensation was created in Europe by the recent announcement that Turkey had leased the African province of Tripoli for ninety-nine years to a French Company which undertakes to make extensive improvements in the port, receiving in return the import and export duties and other advantages. Its area is about 400,000 square miles. Italy, so it is reported, has all along expected that in time the province would be hers, and in 1902, when the rapprochement between France and Italy took place, an agreement was reached between the two countries in which France intimated that she had no interests in Tripoli, and that consequently Italy had a free hand there.

The one hundredth anniversary of the passing of the poet Schiller was observed at Weimar, Germany, last week. Delegates were present from the universities of Germany, Austria-Hungary, and Switzerland, as well as representatives of America. The Schiller Women's Society received \$62,500, of which \$12,500 came from American donors, for the erection of a Schiller Institute. Representatives of American universities and colleges voted to raise money to form what will be known as the general Schiller fund of North America, for the promotion of German intellectual life at American universities.

The project of constructing a canal from the Baltic to the Black Sea, utilizing rivers for the purpose, is taking practical shape. The Czar has authorized the appointment of a committee to examine the schemes submitted. The construction of the canal under these plans would occupy six years. The most interesting feature of the proposed work is that the depth and width of the canal would enable battleships, except those of the very largest size, to pass from Kherson to Riga in a week. The Black Sea fleet would thus be able to get to the ocean without having to pass through the Dardanelles.

Count Cassini, the Russian Ambassador to Washington, has been transferred to Madrid. He will be succeeded here by Baron Rosen, until recently Russian minister at Tokio. He has been accredited seven years to this country. It is intimated that his reports home were not definite enough in estimating the feeling of America on the matter of the Russo-Japanese war.

Industrial and Commercial.

The project of draining and reclaiming the Everglades of Florida, with their three million acres of highly fertile and richly timbered soil, has been revived, the Governor having recently sent a message to the Legislature asking for the enactment of a law permitting the work to be begun immediately. The State is not asked to pay the bill, a canal company, with ample capital, being ready to do the work, claiming for reward a portion of the land and a greater part of the timber. It is contemplated to cut a canal from the St. John's River on the Atlantic across the State, following its chain of rivers and lakes through the Everglades to the Caloosahatchee River. If the offer is accepted the canal will be made wide and deep enough for the passage of large freight and passenger boats.

By directing the wonderful ability of the peon class of Mexico in the burning and decorating of pottery ware an enterprising Englishman expects to build up a paying business in Mexican pottery. He has secured control of a large portion of the clay fields at Metepec, which abound with the finest variety of potter's clay. At present there are hundreds of Indians working in the fields around Metepec who are expert potters.

The Ratcliff-Rotherhithe Tunnel, now being built under the Thames, will take five years to construct. Its length will be 6,883 feet, with an external diameter of thirty feet, which will allow a carriage-way of sixteen feet and two foot-ways four feet eight and one-half inches wide. When it is finished there will be three tunnels under the Thames at London.

A new railroad line to be built from Chattanooga to Stephenson, Ala., as a division of the Southern Railroad, is to be carried by a tunnel through the historic Lookout Mountain, at a cost of some \$3,000,000. This line will traverse a section of country rich in agricultural products, in coal fields, and in lumber forests.

The statistical report of the lake commerce through the Sault Ste. Marie canals for the month of April shows a total movement of freight eastbound of 920,497 tons, and westbound 379,669.

The total imports of merchandise for domestic consumption into Germany in 1903 amounted to \$1,428,640,000 and the domestic exports to \$1,193,483,000.

The Pennsylvania Railroad Company has contracted for 33,500 tons of steel rails for delivery this year, in addition to the 102,500 tons already ordered.

General.

The three-mile-long crater of Kilauea, a constantly agitated lake of liquid lava, is showing great activity, and the burning lava is steadily rising. Should the pressure increase there is great danger of a terrific eruption.

Kilauea is sixteen miles from Mauna Loa, its parent which it has outgrown, and fifteen miles nearer the town of Hilo with its 25,000 inhabitants.

In one of its overflows, one hundred years ago, Kilauea gave forth 15,000,000,000 cubic feet of rock and lava, changing the formation of the coast for miles. In its eruption of 1868, Kilauea sent a stream of lava sixty miles to the southwest, where it poured over the cliffs into the sea and formed a pyramid of lava, which, by later accessions, gradually became attached to the mainland and is now known as Kalae Point.

Excavations near Pompeii have brought to light four solid gold bracelets of beautiful design set with emeralds, a pair of large oriental ear-rings, two golden necklaces set with pearls and emeralds, and two emerald rings. The articles are of great artistic value and belong to the Roman Pompeian epoch.

In one unbroken nocturnal flight the European bird known as the Northern Blue-throat has been known to travel from Central Africa to the German Ocean, a distance of 1,600 miles, in nine hours.

The population of India since 1891 has increased over forty million. These speak one hundred and eighty-five languages, and represent eight great religions. The population in 1902 was 294,361,056.

The island of Ceylon is one of the largest graphite mining countries in the world. Large deposits are also found in Siberia, chiefly in Lake Baikal.

The ground on which the Bank of England stands, valued at \$250 a square foot, represents a value of \$32,770,000.

Germany has 6,500,000 women who earn their own living, while Italy, with half the population, has 3,250,000.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, WATCH." Jesus.

From our Contributors.

Reality and Unreality.

M. G. KAINS.

WHEN the writer first became interested in Christian Science, the use of the words reality and unreality puzzled him not a little. He had used these terms in the way popularly employed in the natural sciences, of which he had long been a student, and these sciences had educated him to assert the non-existence, or "unreality," of things beyond the cognizance of the physical senses, upon whose testimony the whole fabric of the natural sciences is founded. Sounds, tastes, odors, and everything seen or felt were very real to him and constituted his contracted universe; things spiritual were idle dreams. Needless to say, he had become an agnostic in the sense employed by Huxley; namely, one who does not know, but questions.

Therefore, the statements, "make it unreal," and, "realize" so and so, were, to say the least, disconcerting, for things which a natural science education and "common sense" declared to be real and to exist—how could they be made unreal? And things which these same two arbiters declared to be nonentities—how could they be brought into realization?

Fortunately, the reasoning employed in the natural sciences came to his aid. He was startled to discover the numerous things which to the physical senses are not at all real, but very unreal, in whose existence he believed unshakably; and also the array of things real to these senses but provably non-existent. For instance, gravitation, cohesion, adhesion, affinity, mass, weight, and scores of other instances were as real to him as if they had been seen, felt, heard, tasted, or smelled. On the other hand, mirages, echoes, the initial acid taste of saccharine (a material many score times sweeter than sugar), the pleasing smell of certain malodorous chemicals when diluted, and the many deceptions of touch, especially with respect to heat and cold, were all explained so that their unreality became apparent. This discovery declared the physically unknown cause to be the reality and its observed phenomena to be the incidental but inseparable effects. From these observed effects the existence of the reality—cause—is argued. Gravitation is proved as perfectly by the gentle descent of a snowflake as by the terrific rush of a meteor. So of every other of these intangible "realities"; reason explains them all. Similarly, reason explains the mirages, echoes, and every one of the long list of "realistic illusions."

In order, therefore, to destroy an unreality, no matter how seemingly real, it must be traced to its cause. With the discovery of this the sham is exposed, and who believes in a sham when he knows it to be such?

The following experiment will illustrate this point. A person is completely blindfolded; one of his hands is then immersed in hot water, the other in cold. After a few minutes the hands are lifted out by the experimenter, who without delay pours the hot and the cold water together into one vessel. If the dupe be kept in ignorance of what is done, and if he tells the truth,—that is, as to the sensation he experiences,—he will assert that the mixture feels hot to the cold hand and cold to the warm one. When his eyes are

unbandaged he will discover that there is but one vessel, in which his hands have been dipped alternately, and he will therefore no longer believe the sense-testimony.

Again, to prove the existence of what has been here termed an "intangible reality," the assumption must be made that such a thing may exist and then thought must be directed in channels where its effects would logically appear. It was in this way that Adams in England and Leverrier in France independently reasoned about the existence of the planet Neptune, which, up to their time, had been considered a fixed star. From observations upon the behavior of the planet Uranus, Leverrier argued the existence of a large stellar body, and mathematically determined its position so accurately that Galle of the Berlin Observatory found it within one degree of the place Leverrier had assigned.

The laws of gravitation, expansion of gases, specific gravity; in fact, all the so-called physical and chemical laws, were assumed from meagre data. Logical reasoning accompanied by experimentation then proved them, and they have become useful in proportion as they are understood. The better they are understood the more useful they become. In other words, we realize—take advantage of—these laws whenever we secure their effects.

Among the laws discovered during the nineteenth century, and far more important than all the other known laws put together, is the law of Love. This is the one, all-embracing law of God. From meagre but convincing phenomena, and from faint but positive Biblical records, Mrs. Eddy assumed the existence of this law, and worked, as other investigators have done, in channels where its effects might logically be expected. After subjecting her discovery to very many and exacting tests, which left her no shadow of doubt as to its positiveness and supremacy, she announced her discovery to the world in her book, "Science and Health with Key to the Scriptures." As in the case of every other benefaction, the discoverer was maligned, ridiculed, vilified, but what of all that? she knew she was right, as others soon proved through her teachings.

The power and utility of any law is realized only by application. No law can be applied until it is understood; and, conversely, when it is understood it can be applied. Further, the individual who understands and applies it is the only one competent to explain. Those who jeer merely reveal their ignorance and prejudice.

How is the law of Love to be realized? By assuming the existence of such a law, and working in channels which such a law would logically take, noting phenomena which can be correctly explained upon no other basis and excluding all phenomena out of harmony with this law, no matter how closely linked they may seem to be to it.

An example which came under the writer's observation may be permitted in elucidation. A man without worldly influence was, by a series of circumstances, so situated that his reputation and success seemed to be in the power of another, with the result that things went from bad to worse, until hate seemed ripe for blows. The hate and its concomitants were very real to these two and to several others. However, one of the men was taught something of the law of Love through Christian Science. This he applied, with the result that the hate was destroyed and the men now meet as cordially as before the initial provoca-

tion. In short, the law of Love had been realized, and applied so effectively that nothing but friendliness is evidenced between them. The hate which seemed so real has been destroyed—replaced—by the love that once did not seem to exist at all.

In similar ways the Christian Scientist applies his knowledge of the law of Love in every case presented to him. Malice, revenge, greed, limitation, sin, and their effects, diseases, are recognized as unreal, in spite of their seeming reality; and the law of Love is so effectively realized—that is, applied—that each untoward seeming is destroyed. Thus the Scientist, by intelligently applying his knowledge of this law, suppresses unrealities in himself—his great and only battleground—and comes into possession of the realities, love, joy, peace—all the fruit of the Spirit.

Prayer and Faith.

M. M. HAPER.

Two very closely related commands are, "After this manner therefore pray ye: . . . Thy will be done"; and, "Wherefore be ye not unwise, but understanding what the will of the Lord is." Many Christians acknowledge that their prayers are, to a greater or less extent, mingled with doubts, occasioned by a belief that perhaps the blessings for which they pray are not intended for them; so, to dispel doubts, the first duty is to understand what the will of God is. Then may we safely offer our prayers without fear of conflicting with this greatest of all prayers, "Not my will, but thine, be done."

Many are the Scriptural passages which indicate the need of gaining spiritual understanding. As a reproof came the Master's query, "Are ye also yet without understanding?" The will of the mortal leads to selfishness, sickness, sin; God's will to none of these.—He willeth "to do of his good pleasure." His "good pleasure" is ever to create and maintain all things good and perfect, like Himself. So long as we do not know whether our prayer is in accord with His will, doubts must necessarily intervene and hinder. Taking Jesus' example, and the chart which he left his disciples, Christian Science teaches that it is God's will, in all cases, that all which is unlike Divinity be destroyed through the prayer of spiritual sense. The thought that knows His will, destroys all fear and doubt.

"Why are there so many unanswered prayers?" ask some bewildered petitioners. "Is it because God does not consider it best always to grant that for which we ask?" Let us seek the answer in the Scriptures and not from any catalogue of human opinions. In Isaiah we read, "The Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." This refers both to God's power and willingness; He is not unwilling, neither does He turn a deaf ear. Beyond question, if we were not guided by unerring Principle, we would often ask for unnecessary and injurious things; but he who is governed by that Mind "which was also in Christ Jesus," is necessarily directed by divine Principle, and cannot ask amiss. When afraid of asking amiss, one's first prayer should be, "Give me understanding, and I shall keep thy law," and then, through the study of the Word, "I will pray with the Spirit, and I will pray with the understanding also."

A lady once remarked, "I should think you Christian Scientists would be kept so busy praying for your bodies, to keep them in health as you do, that you would have no time to pray for your souls." This showed an erroneous concept of Christian Science prayer.

Afflicted bodies testify to inharmonious conditions of thought. This assertion, though strange to those who know not Christian Science, can be proven true. All prayer is thus for right mentality, and for the coming of the kingdom of heaven. If our thoughts are right,—are corrected and governed by divine Love alone,—there is no doubt

that the body will also be corrected and governed by the same divine power, and be in health.

When our prayers turn us constantly to that which is good and true, we find that the divine Mind cares for the human body and supplies all our need. Jesus said, "Take no thought for your body," and Paul counseled his hearers to be absent from the body, and to be present with the Lord, and this is what we seek to attain in our prayers. A Christian Scientist, in treating his patient, dares not look to the body for evidence, else his prayer would be un-availing.

May it not be true that there is a certain amount of self-righteousness among those who think they know how to pray? The disciples had spent many hours with Jesus; had received many instructions from him; had seen many works accomplished by him; and had undoubtedly offered many prayers, but one of them awoke to perceive his need when he said, "Lord, teach us to pray." How many of us have offered this most important of all prayers? Do we, like the Pharisee, entertain a vast amount of self-satisfaction and self-congratulation, thinking we know it all? If so, then when prayers are of little or no avail, alas for that condition of mind which says, "It was not His will!" Or, failing to do this, says, "The object of my prayer was not ready for a blessing."

One thing for which we may safely pray, is mentioned in James, I, "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not." Then there will be no cause for the weakening of our petitions by doubts and fear as to whether the prayer is contrary to God's will; nor any excuse for ignorance. What would have been the result, if the disciples, while commanding the lame man to walk, had stopped in their prayer to question, "Perhaps it is God's will for him to remain afflicted; He may have a wise purpose in it;" would they thus have been claiming the power and authority over all manner of diseases which Jesus promised to whomsoever believed on his name? No! "Let him ask in faith, nothing wavering;" this is the attitude which we are encouraged to take in doing the work of Truth. Then the petition for wisdom and the receiving thereof, will cause us to "abide under the shadow of the Almighty." Is there any especial wisdom in having stomach trouble, paralysis, abnormal growths, colds, etc.? No. These, then, are the errors of sense which are not included in the "every good gift and every perfect gift" of divine wisdom. James says, "A double minded man is unstable in all his ways." The man who asks and receives wisdom of God, is not, cannot be, double-minded. He cannot serve both good and evil. He cannot be affected by both faith and doubt. He cannot believe that the all-loving Father who answers the prayers of one mother in behalf of her wayward or sick child, fails to answer the same prayers of another mother. A mother once said, with sobs, "Oh, why is it that my boy is a drunkard? Seeing so many repulsive boys, I was afraid he would be like them, therefore I prayed earnestly every day for him, from his babyhood." Here was prayer and fear voiced in one sentence. Moreover, how can we, with faith, claim the answer to our prayer; viz., that God has heard us and healed our dear ones of sickness or sin, and meantime hold malice toward another's dear ones?

When the sick fail to be healed in answer to prayer, would those who say it was not God's will for them to be healed, hold to the same theory in the case of sin also? It would be quite as reasonable, if prayer failed to heal the sinner, to say it was not God's will that he should reform, as to say it was not His will to heal the one who was sick, and there is no more Scriptural authority for one assertion than for the other. Christian Science teaches that if either sin or disease fail to be healed, it is never because of God's failure to answer prayer, but the cause of the seeming failure is the same as when the disciples failed to heal the case concerning which the Master said, "This kind goeth

not out but by prayer and fasting." There is a mental fast which is by far superior to a merely material fast. The fasting referred to by the Master might well signify abstinence from even one opposing thought of doubt, fear, self, together with the looking to matter for evidence. God is unchangeable, hence divine Love always wills the destruction of all that is not good.

The one who doubts and prays is double-minded. If our Father hears us, why should we doubt? When thought is governed by Principle, the body and our environments will be harmonious, as God's unerring wisdom directs. Principle could not possibly be manifested otherwise than harmoniously, even though the mortal short-sightedness may not be able to see this.

"With all thy getting get understanding." Faith alone cannot heal. "A rod is for the back of him that is void of understanding," said the wise man. Peter says that faith needs to have added to it, virtue, knowledge, temperance, godliness, and charity. This may help to enlighten some who say, "I have as much faith as any one, yet I am not healed." What is lacking in such cases? Have these virtues all been added to faith? If they have, there is an apostolic promise of abundant fruition.

Mrs. Eddy puts a solemn question before us, when she asks whether we are really grateful for the many blessings we possess. (*Science and Health*, p. 3.) Ingratitude for present blessings must, of necessity, hinder the unfolding of the faith which brings greater blessings.—prayers answered, and faith sent upward through a sin-cleansed consciousness.

"Thy will be done."

GENIE H. ROSENFELD.

ALL my life the prayer, "Thy will be done," had been a prayer of resignation. Whenever anything peculiarly distressing happened, every one looked serious and said, "God's will be done," and as a consequence I was impressed with the thought that God's will was manifested in the sending of sufferings which it was our duty to take with resignation, if not with gratitude. This had troubled me before I came into Christian Science. When I was happy I never could say, "Thy will be done," without a little shudder of fear lest something might happen to mar the present peace, and error whispered a hope that God might not think about me just yet.

After I began my work in Christian Science the prayer was still a hard one to say. I strove to realize the supremacy of God, but the God of my former beliefs still seemed to be an awful, avenging God, to whom I had to submit, until one day a patient came to me whose condition was, I felt, caused by lack of the understanding of divine Love. I began my treatment by reading and explaining to her the beautiful Lesson-Sermon on "Love," and at the same time I was myself studying the current Lesson on "God." Like a breath direct from heaven, the truth came to me,—those four sweet words, "Thy will be done," embody all that is. They are not a prayer of resignation or renunciation, but comprise all good, all praise, in that they acknowledge the supremacy of the one God; all prayer, in that they ask divine Love to guide and govern us; and if Love does govern us, we must be happy and harmonious in "mind, body, and estate!"

God's will is the will of Love, and if it were done in us, then divine Love would rule us and all evil would be overcome, and this would mean the reign of peace, harmony, and love, the acknowledgment of the one God, the absolute destruction of the false gods of ambition, self-love, fear, hate, and greed, which we hug to our bosoms. It would mean the brotherhood of man, for there could be no warring or striving against each other, no cheating in weights, measures, or qualities, no criticising or carping, but each

would be helping the other to attain his full perfection. It would mean the ruling of our thought by the divine Mind, and thus each would be enabled to know that in whatever especial way he was permitted to reflect the divine Mind he was able to do so perfectly,—whether in writing, painting, singing, in buying, or in selling. If God's will were done, there could be no failures, no imperfect work, no neglect of duty, no giving error an opportunity to bind us with the chains of sorrow and desolation.

The prayer, "Thy will be done," covers all that man could ask or desire, and when we pray it, understanding its full import, we are doing our part towards that establishment of the reign of Truth and Love which was promised to us by Christ Jesus, and revealed to our darkened understanding through the spirituality of our revered Leader.

Poverty.

B. S. JOSSELYN.

If Christian Scientists are not proving the abundance of God's supply, as sufficient to meet their every need, they are not demonstrating as they should the Principle of Christian Science. If we are reflecting God perfectly, we know that He is not only our Life but that He is also the source of our health, strength, harmony, intelligence, dominion, and of our supply as well; and we should understand that His supply is inexhaustible and is sufficient for our every need. While I have not at all times had as much money as I seemed to require to meet my obligations, I have never failed to meet them when due, by simply knowing that "God moves in a mysterious way His wonders to perform." The supply has always been given me, and my reputation for promptness and honesty preserved, and this all may do, if they will only get rid of their fear that God will forget or overlook their necessities.

To wait for an accumulation of riches before we do this or that, is like waiting until we understand algebra before attempting to demonstrate a simple problem in primary arithmetic, or like waiting until we have a full understanding of Christian Science, before we attempt the destruction of what is called a headache. We are taught to use, at once, the little understanding we may possess, realizing that "sufficient unto the day is the evil thereof," and also, that sufficient unto the day is the good with which to neutralize the evil. It seems to me that the belief in poverty is as much a disease as any other form of inharmony, and if Christian Science will heal one it will heal the other, since God is the source of our supply in all that is good and needful.

[Written for the *Sentinel*.]

Inward Life.

REV., WILLIAM P. MC KENZIE.

O'ER broad white fields the gusty North Wind blew
Against the beeches iron-limbed and gray,
And hurled its darts, and snowy mounds upthrew;
Nor yet one fluttering banner took away.

With warm and fragrant breath came Spring at last,
And wooed the warrior beeches, stern and old;
And at her feet the withered leaves were cast,
Which they 'gainst Winter's fiercest blast could hold.

Thus men, in scorn of threat and keen rebuke,
The withered evils of their past will flaunt;
And never thought of yielding will they brook
Till Love shall come, with no harsh word nor taunt.
Then inward life shall burgeon as in May,
And thrust the wrong like faded leaves away.

Selected Articles.

We give below a few representative editorial comments on the late veto of the Nebraska Medical Bill, by Governor Mickey of that State.—Ed.

Governor Mickey of Nebraska has vetoed the bill passed by the legislature of that State, forbidding Christian Science healers from engaging to heal the sick in that State unless they had taken a four-years medical course and had a license to practise medicine in Nebraska. In vetoing the bill Governor Mickey seems to be in pretty good company, for thirty-eight States in the Union have, since 1898, undertaken legislation along this same line, and in each of them the measure has either been defeated, or amended so as to exclude Christian Scientists, or vetoed by the governor. In most cases the enactment of these laws has not been demanded by public sentiment, but has been inspired by the medical fraternity, and it is interesting to note that legislators, governors, and courts have stood between the medical fraternity and the constitutional rights of the Christian Scientist.

There are all sorts of views of the Christian Science sect—from the one which declares the doctrine a mild sort of insanity to that which believes it competent to cure every ill to which the flesh is heir. It is not for the *Argus-Leader* to enter this controversy. It would be an invitation to an interminable controversy which could do no good, and in which we candidly confess we might easily get worsted. It may be said, however, that Christian Science is not a system of medicine, but is a religion, and it is not the business of the State to interfere with the practices of religion so long as these practices do not harm the State or injure innocent persons. The law does not compel a Methodist or a Congregationalist to call a surgeon when some one else thinks a surgeon is needed. It allows the individual to pick out his own kind of medical treatment. It simply says that men who profess to have studied medicine shall have actually done so and shall be able to pass a competent examination. This is to protect the public against imposition. The man who believes in medicine wants a practitioner who understands it, and the law tries to protect him from imposition.

But the Scientist does not believe in medicine. He believes that human ills can be cured by prayer. He may be wrong. He is sure he is right. It is an unsafe business for the State to undertake to decide. So far the Scientists have largely the better of the legal phase of the controversy, and the indications are that repressive legislation of this sort will not much longer be attempted.

Sioux Falls (S. D.) Argus-Leader.

The proposed law (vetoed by Governor Mickey) was an anomaly. It did not directly prohibit the practice of Christian Science healing in Nebraska, but it aimed to bring about that object indirectly by requiring that so-called healers should take a four-years medical course before being allowed to practise in the State. Of course no consistent Christian Scientist would do that. The basic teaching of the faith is that medicines are useless and that errors of the flesh can be cured by divine Mind alone. In its practical application, then, the law would mean that the Christian Scientist, who of necessity has no confidence in medicine, could not enlist the services of a fellow-believer in an effort to effect a cure in the only way both believed feasible. It is easy to see that there would be no utility in such restriction, to say nothing of its probable unconstitutionality, as interfering with individual liberty. A law requiring that in case of sickness every person who was taken ill must send for an allopathic or a homœopathic physician, would be only a degree more absurd. The subject is such a delicate one that the legislators may well let it alone. If Christian Science is a mild form of insanity, then the State

ought to take care of its members, just as is done with other persons who are believed to be capable of harming themselves or others. If Christian Scientists are sane, they ought to be allowed to look after their own affairs, if by doing so they are not injuring the community at large or forcing their methods upon helpless persons. The individual who is afflicted with disease is allowed to exercise his own option as to whether he shall take the nasty medicines prescribed by the doctors or whether he shall submit to the surgeon's knife in an effort to effect a cure. It is not a serious enlargement of personal liberty to allow the individual to make the same decision with reference to so-called mental healing.—*Sioux City (Ia.) Journal.*

Some two weeks since the *Patriot* offered a brief editorial comment on a bill then pending in the Nebraska legislature, the purpose of which was to prevent the practice of healing by Christian Science methods and to check the rapid growth and development of Christian Science religion in that State.

The bill passed both houses, but was vetoed by Governor Mickey, and the argument he offered in support of his position will prove interesting reading to the people of New Hampshire.

The conclusion of Governor Mickey, that the bill "was conceived in a spirit of intolerance," is especially noteworthy because it locates and defines the motive behind all such attempted legislation.

There is a tendency among those who have once had their business recognized by law and custom, to appeal to the law and to sentiment to protect them and their business against all newcomers, even though the ways of the newcomers may be infinitely better.

It is safe to say that out of every one hundred such bills as that introduced in the Nebraska legislature, ninety-nine of them were inspired by physicians who imagined they saw, in the spread of Christian Science thought, a menace to their business. That is the whole thing briefly told, and Governor Mickey laid the condition bare.

The Daily Patriot, Concord, N. H.

Governor Mickey's course should be commended, and the action of the legislature condemned. There is altogether too much legislation of this sort, prompted by narrow-minded intolerance and religious or moral bigotry. It is about time that a man has a right to his own opinions, no matter what they may be, and the right to do what he pleases, so long as he does not interfere with the equal rights of other men.

Christian Science is a religion, and as such is protected by the constitution of the United States. And quite apart from the legal rights afforded by the constitution, the fact that people honestly believe in it is sufficient reason why its followers should be unmolested.

Of course it is claimed by opponents that Christian Science is opposed to medical knowledge; but what is medical knowledge? There is no such thing. There is not a single disease, not even of the simplest nature, that a regular practitioner is certain of curing by means of his drugs. It is highly questionable whether diseases are cured by modern drugs any better than they were cured by drugs used in Egypt and Greece, drugs which no physician would think of using to-day. . . . If a man desires to be treated by Christian Science methods, he has a right to be, and no legislature or tyrannical majority of men has any right to prevent him from receiving such treatment.

Christian Science has cured diseases. Probably it is safe to say that it cures as many of them as any theory of medical treatment has done. It is certainly an interesting experiment, and no one but a narrow-minded bigot will desire to see it suppressed. Every honest experimenter should be given a chance to show what he can do, and this is all that the Christian Scientist demands.

Portland (Ore.) Telegram.

Among the Churches.

Legislation in Colorado.

Immediately after the veto of the Medical Bill in Colorado in 1903, the State Medical Association commenced to organize for the next session of the legislature; the draft of a bill to be introduced was circulated throughout the State, which was intended to put Christian Scientists and other "charlatans and mountebanks" out of practice. A special effort was made to elect members of the medical profession to the legislature, and several doctors were elected in both Houses.

The bill as finally passed is now in the hands of the Governor and will doubtless be signed in a few days, and is a great victory for our Cause, as notwithstanding persistent efforts were made to adopt amendments in the Senate inimical to our interests, it was passed with the following clause, "Nothing in this act shall be construed to prohibit the practice of the religious tenets or general beliefs of any church whatsoever, when not prescribing medicine or administering drugs," which excludes Christian Science from the provisions of the bill.

The law as applied to the practice of medicine, is a good one, as it prohibits the insertion or the circulation of the more objectionable class of advertisements pertaining to disease, and will tend to raise the standard generally.

Correspondence.

Dresden, Germany.

The members of First Church of Christ, Scientist, Dresden, Germany, feel deeply grateful for the progress made this year. The apartments which were occupied for the services until now, proved to be insufficient for the crowded Wednesday meetings of the last months. Room was made for more chairs near the pulpit, and people sat in the corridor on camp-stools. This led to a meeting of the Board of Trustees, where it was decided to look out for a new locality. To sense, the conditions seemed to be such as to make the finding of suitable rooms next to impossible. It was determined, however, to work out this problem spiritually.

A fortnight after the meeting was held, one of the members heard of a building containing three rooms and a large hall, which had been built as temporary home for a Dresden congregation while they were building a church and parsonage for the parish. It is in the best quarter, near the Chief-Railway Station and in good connection with tram-cars. The place was immediately inspected, and found to be in every way so convenient, that it was arranged to sign the agreement on the following day. This hall and rooms had been vacant for a year. One hour after the contract had been signed, a business man wanted to take the place for a warehouse. The hall is a separate building, two stories high, and has a seating capacity of more than three hundred. A flight of steps leads up to the reading room and to two other rooms, one of which will be at the disposal of the practitioners. If our church had had to build a home of its own, this could not have been realized more practically and harmoniously. It is quite unique in its way in this town.

This beautiful demonstration has filled us with joy and gratitude, and has strengthened our efforts to live nearer to God and to follow more closely and consciously the great light our revered Leader is bearing before us.

ANNA THILO, Clerk.

The reason why men are so often disappointed in their search for God, is that they do not look for Him first of all where He should chiefly be sought,—in the manifestations he makes of Himself in their own minds and hearts.

DAVID SWING.

The Lectures.

Bradford, Pa.

Bicknell Young of Chicago delivered a lecture on Christian Science at the Church of Eternal Hope, March 6. He was introduced by R. P. Habgood, editor of *The Evening Star*, who said in part,—

Without question, the largest meeting ever held by the Pompelon Club of our city, was the one recently at which the question of Christian Science was discussed, and the fact that there are more persons present to-night than were at that meeting, demonstrates that interest in this subject in Bradford is growing. "Results count," is only another way of saying, "By their fruits ye shall know them." Bradford people always know a good thing when they see it, and are invariably quick of discernment.

I am not a member of the Christian Science church, nor identified with Christian Scientists, yet I have always found them to be most estimable people, good citizens, and of exemplary character, and have frequently been impressed with the fact that they have something in their lives which I have not. Moreover, in my personal observation, there have been positive instances wherein immeasurable physical and moral benefit has ensued under Christian Science treatment and definite cures resulted.

Any individual, business firm, church, city, state, or nation that refuses to acknowledge and recognize any good in other individuals, business firms, churches, cities, states, or nations, cannot help but fail to make the most of its opportunities and achieve its greatest possibilities.

Such a large and representative attendance to-night is an honor to our city, for it manifests the fairness, broad-mindedness, and alertness of its people, and is at the same time a compliment to the speaker of the evening and to his theme. None will deny that there is good in Christian Science, and I am sure it is impossible to know too much about a good thing. I am, therefore, doubly honored and greatly pleased to have this opportunity to introduce Mr. Bicknell Young.—*Correspondence.*

Phoenix, Ariz.

Judge Septimus J. Hanna of Colorado Springs delivered a very interesting lecture at the Doris Opera House yesterday afternoon [March 26] to a large audience. Judge Hanna was introduced by Judge D. H. Pinney, who said in part,—

Christian Science, while only a few years old, has over six hundred churches and over sixty thousand people working in the cause as they advocate it and see it,—the endeavor to lead people to higher and brighter thoughts, to a more truthful view of Christian belief and Christian-like living. It, too, desires and should have the encouragement and assistance of all those desiring to see this world made better by our having lived in it, building for ourselves a high-minded and Christian-like character, a character that, when once established, no power on earth can take from us. This Christ-like character is what all good people are striving for and love to see exemplified in the character and teachings of others.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

E. Noyes Whitcomb.

WE are called upon to record, with tenderest love and sympathy, the sudden passing from our sight of our beloved brother, E. Noyes Whitcomb of Boston. Our Leader has spoken of him as "one of the noblest, most lovely, and best of men," and those who have been brought into daily association with our friend have reason to know that this expression of esteem was well bestowed; that it was earned by that unfailing ability, justness, gentleness, and practical Christian character which stamped him as a man of highest integrity.

Mr. Whitcomb's long, successful, and honorable business career established him as one of Boston's most respected and best-known business men, and this estimate of him is held not only by those with whom he was brought into personal contact, but by the very great number who knew him by reason of his connection with public and charitable enterprises.

He first became known to Christian Scientists in 1894, through his work as one of the contractors for The Mother Church edifice, then in course of erection, but he has become most widely known to them as builder of the church in Concord, Mrs. Eddy's gift to the Christian Scientists of her home city, and as builder of the new edifice now in course of construction for The Mother Church in Boston.

Mr. Whitcomb became a member of The First Church of Christ, Scientist, in Boston, January 4, 1896; was elected an Executive Member, December 28, 1901, and has filled every position assigned to him in his connection with the Christian Science movement as an exemplary Christian. The good he has done lives after him, and his memory is cherished as that of a just, generous, lovable, and loving man, who accomplished much for his fellows.

ARCHIBALD McLELLAN.

The Appeal of Nature.

The nature of the universe is the nature of things that are. Now, the things that are have kinship with things that are from the beginning. Further, this nature is styled Truth; and it is the first cause that is true.

MARCUS AURELIUS.

"I FIND that I am losing interest in the things of the natural world which once brought me pleasure. As the sense of the unreality of matter grows more clear, the gravity of the deception under which I have been laboring has seemed to lessen the force of nature's appeal, the satisfaction it has hitherto brought me."

These words, spoken by a thoughtful novice in Christian Science, voice, no doubt, the transitional experience of many, and the possibility of such an experience evidences how completely, in our past education, nature has been disassociated from our thought of the nearness and activity of Mind. Things, both good and bad, have been looked upon as the phenomena of a blind, indefinite somewhat, called law, and that deep sense of the immediate manifestation of Divine intelligence which inspired the Hebrew bards and prophets, has had no place. If we have indiscriminately identified nature with materiality, as we

surely have, then it were impossible to escape this result, for in the hour of awakening to Spirit, the charm of materiality must pass with the discovery of its nothingness, and our whilom pleasures in nature can but be sensibly sacrificed.

It is apparent that our first need is to know nature for what it is, to link in our thought all that is true, beautiful, and good to God, and to know that the inharmonious, the unlovely, and the harmful can have no relation to Him, no place or part in His universe. As the writer of the Epistle to the Hebrews has said, "That which beareth thorns and briars is rejected, and is nigh unto cursing; whose end is to be burned." This discrimination relieves us of the conflicting thought of divine law as expressed in both beauty and blight, and ultimately begets the realization that the cruelty, danger, and decay, associated with our experience of the external world, are as unauthorized, as foreign to God's universe, as is sin. Then, indeed, may we "come forth into the light of things," be taught of nature, and attain to that "sense sublime,"—

Of something far more deeply interfused,
Whose dwelling is the light of setting suns,
And the round ocean and the living air
And the blue sky, and the mind of man,—
A motion and a spirit, that impels
All thinking things.

The fact that, in common thought, the art and beauty of nature are not immediately recognized as the manifestation of Mind, explains the contrast between the interest awakened by a clever picture and that awakened by the object pictured. If the work be masterfully done, if it have that imaginative and suggestive quality which we call the artistic, we make little demand that it shall be like unto anything in heaven or earth. This is explained in large part by the fact that it speaks to us so plainly of the genius and technique of the author. The work is seen to be a disclosure of an order of intelligence which commands our attention because of its delicacy of perception and of imagination, its ideality and strength. Our interest in the splendor and capacity of the creative thought has unconsciously attached itself to the art work which manifests it. This interest in the expression of these qualities is so great as to be largely indifferent to the attractiveness or unattractiveness of the object portrayed, whether it be Millet's poverty-clad peasants at their work, or Van Dyke's emblazoned royalties at their ease. The canvas, the paint, the brush, the object,—these are reckoned as an "unassuming commonplace," but the composition, the drawing, the coloring, the finish, the indescribable substance of the work,—these tell of the major ingredient, artistic intelligence, and apart from this subtle sense of the doer and his doing most works of art would lose their interest. It is a kindred realization of the divine manifestation and nearness, in that universe whose glories crowd our every path, despite the veiling and distortions of material sense, which leads us to so love the Spring,—"those heavenly days that cannot die."

To him who, through the gladsome coming of Christian Science, has been led to apprehend the truth of being respecting God and His manifestation, who has attained to this nobler thought of nature,—to him all the good, the beautiful, and the true, should minister as never before. The disharmony and abnormities which have burdened him hitherto, are now known as a manifestation, present and sequential, of that false material sense which is being replaced by the divine idea, and birds and bees, flowers and flowing streams,—all good, innocent, and harmless things will nourish joy and establish faith as never before. They have been rescued in thought from the degrading touch of materiality; they have become the messengers of Truth and Love.

Man has no nobler endowment than that of the imagination, and it is to this that nature would ever make uplifting appeal. As one has said, "Our religion is too often a starveling, inhuman, and unholy thing. And it is

so . . . because it has lost in inspiration. . . . It has become strident and unlovely, something to be stoutly asserted, blindly defended, and tenaciously held, rather than absolutely trusted, nobly evidenced, and beautifully beloved," and he rightly adds that religion must touch reality, kindle the imagination, open hidden glories, and teach men habitually to believe in them. In every true Christian Scientist the appeal of nature will help to effect this end, for its ministry is divine, it brings him into immediate touch with the infinite. In many a quiet hour and secluded place it is his privilege and joy to find that

One impulse from a vernal wood
May teach [us] more of man,
Of moral [knighthood] and of good,
Than all the sages can.

JOHN B. WILLIS.

The Communion and Annual Meeting.

ARRANGEMENTS are being made with the railroads for reduced rates to Boston on the occasion of the Communion and Annual Meeting of The Mother Church, June 25, 27. Persons who wish to avail themselves of these rates should obtain information from their local ticket agents.

The usual arrangements for the convenience and comfort of visitors while they are in Boston, will also be made.

Letters to our Leader.

Toronto, March 16, 1905.

Rev. Mary B. G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader and Teacher:—I am glad to tell you of another beautiful proof of the power of Truth to heal, in what *materia medica* termed a very pronounced case. I was called, on a Sunday afternoon, to visit a lady who had what the doctor diagnosed as a cancer or malignant growth on the breast. All arrangements were made for a surgical operation to be performed the following Tuesday morning at ten o'clock. Doctors and nurses were engaged, —even the pictures removed from the walls of the room she would occupy while laid up. I talked with her, showed her the power of God to heal all our diseases, etc., and suggested that she postpone the operation; but, as she expressed fear about doing so, I left her to think the matter over and let me hear when she had decided. Her daughter telephoned me that evening that her mother had decided to try Christian Science treatment. I went to her the following day, and gave treatment daily until the next Saturday, when, to my glad surprise, she said to me, "I think I am healed." She expressed a desire that I would visit her again on Monday. When I did so, she again affirmed that she was quite satisfied that she was healed, and raised her hand to her head, which I think she told me she had not done for about a year previously. She also pressed against her breast, to show me that all soreness had gone, and, with tears of gratitude flowing from her eyes, she told me of the sunshine and joy which the message of Truth—revealed through Christian Science—had brought into their home. Several social functions had been abandoned by members of her family, owing to the wave of sadness that had come into their home, when it was decided that their loved and loving mother must undergo a serious operation. Now their mourning is turned into rejoicing.

Five weeks have elapsed and she has had no further trouble with the breast, and yesterday she came to see me and told me she had also been healed of a serious bowel trouble, for which she had to depend upon purgatives always, but now she has gone for five weeks without them, and the utmost regularity of action is expressed. She is going to write the history of her healing for our *Sentinel*.

Hoping that this finds you conscious of peace and joy, I am,

Most affectionately yours,

ISABELLA M. STEWART.

New York, May 6, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—I have just returned from a lecture trip in the middle West and send you by express a copy of my book, "The Fair Land Tyrol," which appeared during my absence. I believe that it will interest you to know that this book was originally written before I had studied Christian Science with Mrs. Stetson or, upon your kind invitation, had received instruction in the Massachusetts Metaphysical College. When I prepared the manuscript recently for the publisher, I found that at least half the material needed to be omitted by reason of the change in my thought.

This lecture tour is the longest it has been my privilege to make, so far. I have been reading "Miscellaneous Writings" on the way, and find that your words mean much more to me than formerly, showing a much-needed growth on my part and bringing me ever nearer in thought to the Discoverer of Christian Science. In one of the places where I lectured, there being no hotel considered worthy of the name by the local Scientists, I was entertained at the house of a member of the local church. This lady will be ninety years of age this month, and through the power of Christian Science was able during my short stay to rise above threatening conditions and attend the lecture, where her presence added greatly to the sweet serenity and healing thought of the occasion. At the same place a lady informed me after the lecture that she had been healed of an acute attack of pneumonia through reading my article on "The Omnipotence of God," in a recent issue of the *Sentinel*. The words of the article remained with her during her delirium, and so promptly broke the seeming influence of error, that she was able to cling constantly to God and find herself perfectly well after two days of test.

I find everywhere in my travels that the harvest is ripe and that faithfulness in individual work has greatly leavened public thought in favor of Christian Science.

Yours gratefully and faithfully,

W. D. McCrackan.

Asheville, N. C., March 12, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—I can never thank you in words for your beautiful and helpful letter on "Heaven." It has banished the last sharp pangs of regret and sorrow from my consciousness, over the loss of the dearest, sweetest, truest son that ever lived. I have tried to thank God for my wonderful healing through the truth, as taught in our text-book, Science and Health. In my innermost consciousness I have known what heaven meant, but now, after reading your authoritative letter, I am comforted, for I know my dear boy is still working out his salvation in Christian Science, just as he was on this plane of thought.

My heart turns to you in loving gratitude for the beautiful example you have given us, and may the whole world know that Christian Science is the truth.

Devotedly and lovingly,

RUTH V. BROWN.

Burlington, Ia., April 8, 1905.

Our Beloved Leader:—It is three months now since we pledged ourselves to give our mite to the Building Fund of The Mother Church. We thought it would be a pleasure to you as well as to us to know what a blessing has been ours through this. The first month we sent ten dollars, the second twenty, and the third twenty-five, which are all love-offerings, through the healing of sickness and sin,—not a penny given as a sacrifice. This is proving to us, that if we seek first the kingdom of God and his righteousness, these things will be added; and "he that dwelleth in the secret place of the most High shall

abide under the shadow of the Almighty." In unity we all send our tenderest love and blessing to you.

MISS JESSIE LAY, Clerk.
Second Church of Christ, Scientist.

Brockley, London, April 14, 1905.

Dear Mrs. Eddy:—Too long have I put off writing you, to thank you for the truth revealed in Science and Health. Three years ago, when I first heard of Christian Science, I was in utter despair. I had made up my mind that I could not live long, and had asked my brother to look after my wife and children if anything happened to me. My doctor gave me very little encouragement and my end seemed near. To-day, sunshine fills my heart, and I feel that I must write to you and just say, Thank you. May God grant that every one may soon realize the joy of which I am conscious.

I cannot tell half what Christian Science has done for me, but I now have more desire to get rid of the "I" and to realize the allness of Love than ever I could have believed. Again thanking you, Yours in truth,

H. EVANS.

Lockport, N. Y.

My Dear Teacher:—We are very grateful for the blessing that has come to us in a lecture recently given here by Mr. Bicknell Young. I enclose for you the notes used by Rev. G. A. Brock, pastor of the East Avenue Congregational Church, in presenting Mr. Young. When asked to introduce him, he was so gracious toward you that we were pleased with his prompt acceptance. His just and beautiful reference to you filled our hearts full to overflowing, and I wanted you to know how deeply they seemed to impress the audience.

Your grateful and loving student,

ANNIE R. MICHAEL.

Another Theory Abandoned.

THE following editorial note, which we copy from the *Southern Oregonian*, again reminds us that material theories regarding disease are constantly changing, and that the accepted beliefs of a few years ago have become the discarded fallacies of to-day.

While Christian Scientists cannot accept even these revised beliefs as the whole truth respecting disease, yet they welcome them in-so-far as they tend to destroy the fear which has so long prevailed in many families and communities.—Ed.

Professor Orth, successor to Virchow in the position of pathologist, who examined the German Kaiser's throat last year, and Professor Hansemann, one of the first authorities in Europe, have declared before the Berlin Medical Society that their investigations permitted them to state positively that cancer was neither contagious nor parasitic. They asserted further, there was absolutely no ground for the belief that cancer is alarmingly increasing, but the apparent increase in the disease is due more to the fact that it is oftener discovered nowadays than heretofore. Research has also failed to prove that cancer is epidemic in special places or especially prevalent in certain families through heredity. The public is urged to abandon the theory that the disease is contagious, because it fastens on patients the odium of carrying infection.

Notice to Branch Churches.

The branch churches which have not responded to the call made in these columns, to send to the Clerk of The Mother Church a statement of their membership as it appeared on their books April 1 of this year, are requested to do so at once.

Testimonies of Healing.

The beauty and truth of Christian Science were revealed to me just six years ago, and the revelation has been growing in my thought ever since. Science and Health was given me by a relative who was healed six months before. We knew she had been desperately ill and that she went as a last resort to Boston and after six weeks returned home very much improved. The healing continued until she was entirely well. This of course interested the entire family, and we began to inquire what had wrought the miracle. Then my aunt, the one healed, gave me a copy of our beloved text-book, and I began to study it as I never had studied any other book. I must have been ready for it, and I eagerly drank in the truth, and soon began trying to demonstrate a little for myself. The symptoms of a disease I had had from early childhood began to be alarmingly worse, but only for a few minutes did I entertain the suggestion of going to see my specialist in New York. I put the thought from me, saying to myself, "Does he know more about me than God does?" Soon after, the way was opened for me to spend the winter in a distant city and receive Christian Science treatment. My healing was very slow, although facial neuralgia, which had tormented me for several years, yielded immediately. I returned home in April, apparently but little better, yet I was determined to stick to Christian Science. I had not improved any under *materia medica*, and was convinced that God alone could heal me. I wrote for treatment to the practitioner who had treated my aunt, and in less than two weeks I awoke one morning to the fact that I was free and well. The disease had disappeared, and there never has been the slightest return of it since. But far more than the wonderful healing of the body do I value the spiritual experience I have had. God now seems near and dear as never before, and the Bible is an interesting and inspiring book to me since "Science and Health with Key to the Scriptures" has opened my eyes to see and understand its meaning.

I often wonder if we begin to appreciate the value and marvelous import of this understanding of Christ, Truth, which our dear Leader, Mrs. Eddy, has given to us and to the world. I wish to express my gratitude to God that He gave us our Leader, who has reaffirmed and demonstrated the truth Jesus brought us. Constant proofs are being given me that Christian Science expresses the power of divine Love to heal and save the world.

GRACE ROGERS KNAPP, Westerly, R. I.

I desire to give my tribute of praise for blessings received through Christian Science. Through a friend, the dearest of all books next to the Bible, "Science and Health with Key to the Scriptures," was brought to my earnest consideration, and the beauty and grandeur of the truths therein contained, made me to know that I had found that by which I could work out, with mathematical certainty, every problem of life, as it comes up for solution. After being assured that this was God's own way of deliverance, and that the great works of the Master were being done, I went to a Christian Scientist and received treatment for physical ailments which at the time alarmed me a good deal. One of these I will mention briefly; it was trouble with the left ear, of twenty-two years' standing. My parents had taken me at two different times during this period to ear specialists, and one said that there was a hole as large as a pea in the drum. The discharge from it was very offensive, and the dull, steady pain in and about the ear, shoulder, and arm was hard to bear. At each time when the ear was thought to be healed, through the treatment given by the specialist, it broke out in a more aggravated form, and it was not until I appealed for help, to a student of Science and Health, that I was perfectly and

permanently healed of this, with the rest of the discordant conditions.

My love and gratitude constrain me to speak of safe and painless delivery at the birth of my child. The proof of Love's power over fear was beautifully demonstrated when, like the unfolding of a flower, the arrival of the babe was announced. I was so well and strong that within half an hour of the birth I wrote of it to my husband. Shortly after I ate a hearty breakfast, and was up every day after the first.

Not only for these and many other blessings in the so-called realm of the physical am I deeply grateful, but for the constantly unfolding capacity to understand God. My heart turns in most loving and grateful recognition to her whose life was pure and consecrated enough to receive this great revelation of Truth and Love.

MRS. MARY W. WELDON, Portland, Ore.

It is with a heart full of gratitude to the Giver of every good and perfect gift, and to our dear Leader, through whose love, purity of life, and unwavering loyalty to Truth my feet have been guided into the narrow way, that I send these lines to our dear *Sentinel*, hoping some weary one may also find the way. Many years I wandered in "the wilderness" of ill-health, unhappiness, and hopelessness (my Bible a closed book), until at last I was led out into the light through Christian Science. The understanding of this blessed truth, through the teachings of Science and Health by Mrs. Eddy, has brought me restoration to health, has opened the sacred pages, illuminated its storehouse of blessings, and given me the peace which passeth all understanding. My healing has been a gradual putting off of "the old man with his deeds," through the renewing of the mind. The spiritual uplifting means far more to me than the physical healing, for it has enabled me to pass through the seeming waters of affliction and not be overwhelmed. God's grace has been, and is, sufficient and abundant to dispel every sense of error. It wipes away all tears, it satisfies the longing heart, it opens the blind eyes (the darkened spiritual sense), it unstops the deaf ears, so that the still, small voice of Truth is heard; it speaks the words of Life and Love, always telling of the never failing source and abundance of divine grace for every one of God's children.

ANNIE Q. HEDENBERG, Los Angeles, Cal.

Three years ago last November I was healed through Christian Science, after all other hope had failed. I faintly whispered that perhaps the old man who talked Christian Science was not as crazy as we imagined, and if *materia medica* could offer only a short time of life, after having prescribed everything that might make painless, "Science" could not hurt, if it did not help. I had read a little in Science and Health, but had only grasped that it mentioned a "practitioner," so, strangers and friendless as we were, we wrote a few words to a Christian Science practitioner, telling of my dangerous illness, and confessing that we were unable to meet our daily needs, therefore could offer no money, and asking if, under such circumstances, a practitioner would or could help a needy one.

Help was not long in coming. I was soon almost entirely healed of every physical ill, at any rate I was free from pain, for the first time in all my life that I could remember. I have never been sick in bed but once since, and then but a few hours, until the truth was realized for me. So very much has been done for me in Christian Science that I have never testified to it because it would seem unbelievable, besides being too much to tell. To-day I had, for the first time, the privilege of listening to a lecture on Christian Science, and I feel I must at least acknowledge that I am grateful to God, and to Mrs. Eddy. Disease has

already lost much of its seeming reality to me, but in the theatrical profession, of which I am a member, traveling continually and seeing perhaps the hardest side of life, because less guarded from the sight of strangers, it is sin that, to me, seems the hardest to overcome, and I plainly see the need of greater consecration and purification of ourselves before we can realize the truth about our brother.

MRS. ZAT ZAM, New York, N. Y.

My offering of thanks may be only for the little pearls which come day after day, to brighten the weary struggle for existence. Many were the days, weeks, and years so darkened that I care not in thought or word to bring them back again. The burden of fear that filled my life was heavy, and added to that was intense physical suffering. The bitterness of the trial was increased by the belief that this was God's will. Christian Science came in the hour of my greatest need, and step by step have I been lifted out of darkness and despair, if not yet into perfect harmony, still so far above and beyond what I once experienced, that I feel nothing could tempt me to go back to the old way. Insomnia was a trouble that I had contended with all through my life, but it was met and mastered by Truth at the very start, and for three years I have known what it is to sleep and rest well all night. We have had many demonstrations of God's ever-present help in our family, and while to many they might not seem to be great, to me they have been stepping-stones to a higher and better understanding of the one Mind.

With a grateful heart to Him who is with us always, and to Mrs. Eddy for her wonderful work, I send this testimony.—MRS. BELLE WILDER, Modesto, Cal.

My heart overflows with gratitude when I realize what great freedom has been brought to me through the power of God and His Christ, revealed to me through the earnest study of that priceless volume, Science and Health. When the words Christian Science were first spoken to me, I was a hopeless sufferer with two so-called incurable diseases. I was bedridden for nearly two years and a great sufferer for many years. When told by a kind, loving woman that God could heal me, I asked some questions and the answers were clear. I said to her, "Tell me one thing, Even if I am not healed, will Christian Science bring me nearer to God?" "The answer was beautiful to me, "It surely will." I then said, "I will prove this power," and two days later I was taken to the evening meeting. There were only nine or ten persons present, and during the silent prayer I thought my end had come. Then, all at once, there came a great peace and all my sense of pain left me. I caught a glimpse of the Love that healeth all our diseases and I realized that surely God was in this place. I walked out of that room, my heart overflowing with gratitude to God. I immediately began the study of Science and Health, and that wonderful message of Love explained the Word of God. The next day I walked to the home of a practitioner and was received very kindly. Since then it has been my privilege to prove the truth of Christian Science many times, for others as well as for myself. I rejoice that I can say with one of old, "Whereas I was blind, now I see." My family consists of two grown daughters and myself, and we are trying to obey the command, "Speak ye every man the truth to his neighbor."

Words are inadequate to express my love and gratitude to our beloved Leader for what she has done and continues to do for the whole world. We are daily striving to live the teachings of Christian Science, and to have the Mind of Christ.—MRS. M. E. THOMPSON, Chicago, Ill.

For nearly five years I have been benefited through my understanding of Christian Science, and many times my heart has gone out to our dear Leader, for the spiritual up-

lifting and unspeakable peace I am continually receiving through the study of Science and Health and her other works. I wish to express my thanks for the instruction, help, and timely blessings I have received through the reading of our periodicals. When Christian Science found me I was almost a mental wreck, a very sorrowful, unhappy person, but looking for peace and happiness. Since accepting Christian Science as my guide through life, I have often thought my progress slow, but when I compare the struggles for existence which I had before I knew of this beautiful truth, with the life I have lived since my acceptance of Christian Science, I think there is a decided improvement. I know that God gives me health and peace, and my earnest desire for truth is satisfied,—rewarded. By the study of the Bible and the Christian Science textbook, I have found the peace that passeth understanding. I am thankful to Mrs. Eddy for the opportunities she has given us for advancing in the understanding of Christian Science.—JESSE E. SHAFER, Joplin, Mo.

It is now about three and a half years since I began the study of Christian Science, and feel that I am late in acknowledging the many benefits I have received. It was not on account of physical healing that I became interested, although I had been helped out of small difficulties while still under the parental roof. However, after about ten years, I was reminded of my ingratitude and immediately began the study of Science and Health. Through the knowledge thus gained I have been able to overcome many ills with good. The grip, sick headache, toothache, symptoms of fever, burns, and whooping cough are among the annoyances that have been vanquished by Christian Science.

The demonstration that follows meant a great deal to me at the time. I awoke one morning to find that my right jaw was badly swollen, and as so many people had been suffering with mumps, I knew that was the trouble. I had very little pain with this, and experienced no inconvenience in eating whatever I chose. In a few days I went to visit a relative whom I had not seen for nine years, and was very anxious to spend the time pleasantly. The day after my arrival, my left jaw began to swell. I excused myself early that evening, went to my room and worked in Science for some time, declaring the Truth of being. The ailment was nearly mastered that evening and entirely disappeared so soon after that no one in the house knew anything about it.

I know that I cannot be too grateful for all that God has done for me through the teaching of Christian Science, and I fully realize that only by the daily living of the truth, as our Leader has pointed it out, can I ever repay her.

MRS. A. B. WATERMAN, Colorado Springs, Col.

Two and a half years ago, Christian Science found me in a pitiable condition indeed. I had taken medicine almost daily for about three years for severe stomach difficulties, including constipation and attendant troubles; I had also tried physical culture, dieting, and hygiene, without relief. From the day that I bought a copy of "Science and Health with Key to the Scriptures" and began taking treatments from a practitioner, I ate what was set before me without any ill effect, although it was some time before I was entirely healed. The tobacco habit of about eight years' standing also left me naturally the day I commenced to study Science and Health. I have had no desire for tobacco since. Other minor physical ailments, such as catarrh and a disposition to take cold, grip, ingrowing toenails which formerly were very uncomfortable, and severe headaches, have been overcome. A very disagreeable disposition is slowly but surely being overcome, as well as some sins that go with it; so I follow on, and rejoice when I can, and am learning that as the clouds do not forever hide the sun, neither does error forever hide the spiritual light, which is the Life of men.

I wish to acknowledge my gratitude to God, and to our Leader, Mrs. Eddy, for this truth.

W. T. DUFF, Lincoln, Neb.

I am prompted to tell by what means I was healed. I was led to investigate Christian Science through reading Judge Ewing's experience with Christian Science. I then began to read the works of that gifted and spiritual writer, our beloved Leader. My physical suffering gradually disappeared. Truth had been found, and I was healed of a malady of twenty-five years' standing. Since I have come into Christian Science my life has been one continual song. "Sorrow no longer broods over the shivering form," but peace, sweet peace, has come into my life, the peace that passeth all understanding.

My heart goes out to dear Mrs. Eddy, who has done so much for the relief of suffering humanity. God bless her, is my prayer. God grant that all her followers may make their lives sublime.—MRS. BETTIE R. MARR, Leeton, Mo.

Fourteen years ago, I attended my first Christian Science meeting, but did not go very regularly until some four years later, after I had been cured of a swelled neck of twelve years' standing. After doctoring for a long time with some of the best physicians in my town, and growing worse all the time, I at last gave up all drugs and medicines and was completely cured in three weeks' time by Christian Science. I had another demonstration some five years ago. I started from home one Sunday morning to visit some friends about twelve miles distant. The last mile and a half was up a very steep hill, and when I started on my return trip the wind was blowing very keen at my back, and I soon found myself going at a terrific rate. As I had learned how to ride the bicycle only some three or four weeks before this, and there being no brake on my wheel, I saw no way of stopping it. Faster and faster went my wheel and steeper and steeper grew the hill. My feet flew off the pedals and I was hanging on for dear life. It seemed that I would soon be dashed to pieces; the road was very narrow and stony and there was a deep ditch on either side of it. It began to look very dark to me at this time. I tried to realize the all-power of God as best I could, and soon the chain dropped off and wound around the hind wheel. This brought it to a stop, and not a hair of my head had been harmed.

One morning, some two years ago, I was awakened very early by hearing my mother making a noise in the next room, and on jumping up and running in to her I found her sitting on the floor, vomiting and seemingly in great pain. In just five minutes' time she started back to bed with all the sense of pain gone. She has also been cured of some very severe attacks of grip, colds, and bowel complaint in a short time.

One day, as I was running a power sewing-machine, I turned my head to look at something exciting which was going on in the shop, and as I did so I felt the needle go through my finger. I found that the needle was broken in four pieces, one piece was in the machine and three were in my finger. I pulled the pieces out, and by realizing that divine Mind governs all, the pain left me almost immediately. By the next Monday my finger was as well as ever.

I have had many seeming struggles, but by clinging to God and the true spiritual idea of man, the way grows bright. I am very grateful to our Leader for Science and Health and for her earnest efforts to help us to understand Truth.—E. D. HAZELTON, Utica, N. Y.

Until about three years ago, our little daughter was a healthy child. Then we noticed, several times, that she would sit quietly by herself, turning her eyes up towards the

ceiling. Thinking it was only a passing habit, we used to tell her not to do it, but she would say, "Why, what is the matter? I don't turn my eyes up like that; and even if I do, I don't know when I do it." So things went on all right for a short time, until one day I noticed she stood trembling and had a spasm. She remained in this condition a few moments, after which she was her old self again. I became alarmed at last, and took her to a doctor, who, after giving me some powders and other medicine, told me to come again, wishing of course to know the results of his tonics. After having used up all the medicine, instead of getting well or even better, she only got worse, and instead of standing during her spells she would now fall backwards, and sometimes forward on her face. Seeing that she was getting worse, I went to the same doctor once more, who gave her another bottle of medicine, but with the same poor results. One day we called for a doctor who was termed very skilful by the neighbors, but we received very sad information from him. He said, "The best thing for you to do with that child is to send her to some institute, but I hardly think she will live a year." We were almost broken-hearted at that information, so we decided, as a last resort, to go and see a Christian Scientist. I took the child to a practitioner, who gave her treatment.

After over two and a half years' trouble, I at last have the happiness of saying that through Christian Science our child has been healed of a sickness which all doctors and medicines failed to cure, and our whole family is certainly very thankful for what the truth has done for us. We go to the church every Sunday, we attend the meetings on Wednesday evenings; and all our doubts have vanished with the better understanding of God.

MRS. LIZZIE EICHORN, Milwaukee, Wis.

One Sunday, while on the car, I noticed written on a friend's *Quarterly* these words, "The Declaration of Independence." This had been written by her husband, who is not a Scientist, and I thought that many a word spoken in jest is closer to the truth than is generally believed.

It is nearly nine years since we began to follow the Christian Science standard of liberty, and it has made us free from many forms of error. Through the reading of Science and Health, myself and my husband were healed; he of consumption which had been left him as a legacy. When we begin to learn that God is Love, and that perfect love casts out fear, then we are in a position to accept our God-given liberty and recognize ourselves as His children. Through the study of Science and Health the Bible has become like a new book to us, whereas, formerly, we could not understand it at all.

While we are praising God we cannot forget to offer a tribute of thanks to Mrs. Eddy for this great blessing which she has brought to mankind, opening their blind eyes so they may see how to cast off the fetters that have bound them so long.—MINNIE A. BONSTEEL, Webb City, Mo.

Having been greatly benefited by the truth, as set forth by our beloved Leader, I desire to express my thankfulness therefor. Mortal mind has suggested waiting until an old physical ailment, carried since childhood, should be met, but I feel that it would be base ingratitude to withhold my acknowledgment any longer. I have known of Christian Science for about eight years, having turned to it for help when *materia medica* had failed. Though greatly helped, I was not wholly freed from the ailment, and failing in my early attempts at demonstration, interest gradually lessened, until this Science seemed only a beautiful theory, —too ideal for realization on this plane of existence.

A few months ago, however, crushed by misfortune, one reverse coming fast on the heels of another, until existence was torture and suicide seemed the only solution, I was driven to take up Christian Science in earnest. I did not want physical healing, so much as spiritual, for mortal

mind could no longer endure the strain of its own discords. The change has been slow, at times discouraging, but many old ailments have disappeared, among these being profanity and a violent temper, both of which I had indulged for years. When a child, I was taught to hate one who had wronged my father, and later, upon losing parents and home, this feeling gradually developed into a sense of hatred and resentment toward nearly every one I met or knew, and any friendships became impossible. I am thankful to state that this too has been reduced to its native nothingness, and I know that nothing but divine Principle could have wrought such a change. The destruction of these evils has been more to me than any physical healing could have been.

CHARLES BAKER GILBERT, Philadelphia, Pa.

Three years ago, when I first heard of Christian Science through an article by Lord Dunmore in the *Daily Mail*, I was in very poor health. I had had a long attack of subacute rheumatism, followed by extreme weakness. I tried all manner of material remedies, but none of them did me any good. At last I seemed to be without any hope; my doctor gave me arsenic as a last resort, and said he was sorry, but that it was all he could do for me. In quite a short time, however, after hearing of the glorious truth as given in Science and Health, I was practically well, and during the last three years I have had better health and am much stronger and happier than ever I was before; where all was darkness, now all is sunshine. Great as was the physical healing, it is small compared with the spiritual uplifting I have received. The Bible is a new book to me, and life is full of promise.

Words cannot express how grateful I feel to God, to Mrs. Eddy, who has brought this wonderful truth to us, and to the friends who have helped me in my journey from sense to Soul.—H. EVANS, London, England.

That Christian Science heals the sick I have had abundant proof, having been healed by it of what is known in *materia medica* as an incurable disease. After spending two years in New Mexico, where I was sent for my health, and being told by a physician there and by the physician through whose advice I had gone there, that it would be impossible for me to live in Chicago again, or any place but the West, I came back to Chicago, took Christian Science treatment, and was healed of that disease and of others. Through the study of Science and Health I have been given the right understanding of God, and I have been enabled to see the truth concerning evil; viz., its nothingness. I know that I do not need to be ill, and I know that I have a God who will help me whenever and wherever I ask for help.

I am indeed grateful to Mrs. Eddy for showing us how to step out, on the strength of God's promises, and receive what is so freely offered.

HALLIE VIRGINIA WATSON, Chicago, Ill.

[Written for the *Sentinel*.]

At Rest.

MARY C. SEWARD.

ON twig and bough,
In tiny nest,
Each little bird
Is safe at rest,
Love's watchful eye beholding.

In strain and stress,
Whate'er betide
Of grief or pain,
I may abide
And rest in Love's enfolding.

From our Exchanges.

The prevalent idea of the Easter service seems to be a kind of popular show, a chance to appeal to a taste for the noisy and gaudy. We are often told that faith in immortality is losing its hold on the minds and hearts of thinking people. Certainly our ways of celebrating the immortal hope and our habits of public worship on Easter Sunday are but ill adapted to upbuild any sincere convictions or to inspire earnest endeavor for attainment. I venture to hope that the ministers and people of the free churches will set their faces steadfastly against the progressive vulgarization of the sacred festival, and that they will endeavor to restore the Easter service, if not to simplicity, at least to seriousness and impressiveness.

SAMUEL A. ELIOT.
The Christian Register.

However we regard our life, as a probation or a process of education, there comes to every one the demand for a future where there shall be "a remedy for every wrong, a satisfaction for every soul;" where all the seeming maladjustments and incongruities of life shall be righted; where the ideal of justice which here, where the good often seem to receive the reward of the wicked, is unrealized, shall be discovered; where the end of probation shall be found in an exceeding and eternal weight of glory; where the wicked shall cease from troubling; where the weary shall be at rest; where "oppression's harness and sorrow's fire-whip, and all the gehenna bailiffs that patrol and inhabit ever-vexed time, cannot thenceforth harm us any more!"

Western Christian Advocate.

We are slowly learning that the life is the value element in Christianity. It is no disparagement of creed or ordinance to say this. The confessions in word or deed are the natural expressions of the soul's convictions and emotions, but we may not assign to them any more important place than was given to them by Jesus. Many in his time called him Lord who were far from being accepted by him. Then, as now, men were ready to accord him his rightful place as God's Son who were unwilling to let his Spirit into their hearts. Now, as then, religion which does not mean the life of God in the soul of man is vain.—*The Standard.*

The ashes of the recently burned Universalist edifice in Chelsea (Mass.) had not cooled when four sister churches—two Congregationalist, a Methodist, and a Baptist—invited the pastor to use their buildings until his own was restored, and since then the homeless Universalist Church has worshiped with the First Congregational, the pastors alternating as preachers and in conducting the service. On communion Sunday the pastors and deacons of both churches participated in the service. This is an instance of "barriers burned away."—*The Congregationalist.*

Throughout the civilized world there is a new moral impulse felt which may easily lift society in all its parts to a higher level. The reaction in France toward virtue and sanity among the youth, who are weary of frivolity and sensuousness, is strong; and everywhere we see signs of weariness with the shams and shows and empty prizes offered by the world, the flesh, and the devil.

The Christian Register.

The chief line of cleavage in Christian thought to-day, says a reviewer, is between the theology which looks to the past for absolute authority, and the theology which looks to the future for inspiring development. Sebatier has called these two types "religion of authority" and "the religion of the spirit."—*The Universalist Leader.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. Is it Christian? By Mrs. SUE HARPER MIMS of Atlanta, Ga.

CHRISTIAN SCIENCE. Its Work and Scope. By CAROL NORTON of New York City.

CHRISTIAN SCIENCE. The True Idealism. By ANNIE M. KNOTT.

IN GERMAN

CHRISTIAN SCIENCE. Its Promises and their Fulfilment. By EDWARD A. KIMBALL of Chicago, Ill.

CHRISTIAN SCIENCE. The Christianity of Christ. By Rev. IRVING C. TOMLINSON.

Price. Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, 75 cents; five hundred copies, \$3.25; one thousand copies, \$6.00. Orders for supplements may be assorted as desired.

Pamphlets

LEGAL ASPECTS OF CHRISTIAN SCIENCE. A compilation of Court Decisions, Opinions of Lawyers, etc. 72 pages.

MR. KIMBALL'S LECTURE. 33 pages.

HEALING THROUGH CHRISTIAN SCIENCE. Discourses and Editorials. By SEPTIMUS J. HANNA. 36 pages.

HEARINGS ON PROPOSED MEDICAL BILLS IN MASSACHUSETTS AND NEW YORK. 23 pages.

ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By

EDWARD A. KIMBALL. 26 pages.

PRAYER AND CONFIDENCE. Four articles reprinted from the Journal. 40 pages.

THE LOS ANGELES CASE. Testimonials given in Court as to the healing efficacy of Christian Science. 63 pages.

THE CHRISTIAN SCIENCE MOVEMENT. Revised by CAROL NORTON. 23 pages.

CHRISTIAN SCIENCE IS SCIENTIFIC CHRISTIANITY. A Lecture. By Rev. ARTHUR R. VOSBURGH. 28 pages.

A CRITIC ANSWERED. By ALFRED FARLOW. Printed in German. 31 pages.

Price. One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Orders for pamphlets may be assorted as desired.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid . . \$5 00
Twelve or more copies to one address, each . . . 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

Plans for the enlargement of the terminal and dock facilities at Colon and Panama, and the double tracking and re-equipment of the road, entailing an expenditure of approximately \$2,000,000, were approved by the board of directors of the Panama Railroad Company at a recent meeting in New York City. In a formal statement given out at the conclusion of the meeting, it was announced that the board had investigated the question of securing additional ships of American registry, but had been unable up to the present time to find any such vessels of satisfactory size and character.

Secretary Taft's public announcement that the Isthmian Canal Commission will purchase material for the construction of the waterway in the lowest market, without preference for American goods, and without restrictions as to American bottoms, has raised a great commotion in the ranks of the "protectionists" and "stand-patters." The action is regarded in some quarters as a very frank notice to manufacturers that they must come down in their prices, so that the goods may be bought in the home markets at the same price as identical goods can be bought in foreign markets after being exported.

The start of the eleven yachts entered in the ocean race for the "Emperor's Cup" was made on Wednesday, May 17. They crossed the line in the following order: Ailsa, Hildgarde, Atlantic, Endymion, Hamburg, Thistle, Fleur de Lys, Sunbeam, Apache, Utowana, and Valhalla. The first crossed at 12.15 and the last at 1.05. The first six crossed within three minutes of one another, and the others at intervals varying from five to twenty minutes. The Atlantic was sighted Saturday evening by three incoming steamers, about 650 miles due east of Sandy Hook. The Thistle was spoken the same afternoon, about 450 miles east of the Hook.

A gift of \$10,000 has been received by Yale from an anonymous Harvard graduate for the express purpose of cementing the good feeling between Harvard and Yale. The use of the fund was left entirely to the decision

of the Yale Corporation, which has voted to expend it for securing from time to time lecturers from Harvard to speak before the students of Yale. President Eliot of Harvard has accepted the Corporation's invitation to be the first lecturer.

Fifteen students of the University of Norway, under instructions from the Crown Prince of Norway and Sweden to study America, with special reference to its government, arrived in New York last week. All expenses of this trip are being defrayed by the Government of Norway and Sweden.

It is announced that Secretary Morton of the Navy is to retire from President Roosevelt's Cabinet in September. It is thought also that Secretary Metcalf of the Department of Commerce and Labor will retire about the same time.

A gift from Andrew Carnegie of \$125,000 for a new library at Wellesley College, conditional upon the college raising an equal amount, has been announced. Radcliffe College has also received a gift of \$75,000 on identical terms.

Minister Bowen of Venezuela has reached Washington and filed his statement with reference to the charges current in Venezuela touching Assistant Secretary of State Loomis, formerly Minister at Caracas.

As a result of a conference held at the White House, President Roosevelt will issue a proclamation setting aside about ten million acres of land in Idaho as a forest reserve.

Foreign.

A report of the recent meeting of international representatives of Addis Abeba, Abyssinia, to discuss the railway question, at which Emperor Menelik presided, showed that the Emperor is impatient with the delay in the construction of the line by a French company. His Majesty complained that discussions with the Ministers of foreign Powers had suspended the work for three years, thereby, among other inconveniences, preventing His Majesty from visiting Europe. He declared that if the Powers could not come to an understanding and end the deadlock, he would construct the railway himself, not accepting help from anybody.

The French prefects have received instructions to make inventories of art treasures of all the prefectures. The value of these has been computed at \$400,000,000, reckoning only the reliquaries, pictures, tapestries, and things of like kind. If the statues, altars, stained glass windows, etc., are included, it is estimated that the figure will reach \$1,200,000,000. The treasures in one small church in the Department of Aveyron, which were on view at the Exposition in 1900, drew an offer of \$6,200,000 from a syndicate.

The Second Chamber of the States General, by fifty-six to five votes, appropriated the sum of \$280,000 to purchase the ground for the Palace of Peace at The Hague, for which Andrew Carnegie gave \$1,500,000. The Opposition contended that the other Powers should co-operate in providing this sum, but the Premier, Dr. Kuyper, replied that the honor of the Netherlands and its gratitude to Mr. Carnegie demanded that the money to purchase the site be voted.

In the course of the discussion of the foreign budget in the Italian Chamber of Deputies recently, the Foreign Minister made a statement that it was impossible to concede the annexation of Crete to Greece because of the effect it would have in the Balkans.

Industrial and Commercial.

The Geological Survey has completed its preliminary report on the production of coal in the United States during the year 1904. The tables show a total production of 351,106,953 short tons, having a total value at the mines of \$445,643,528. As compared with 1903, this shows a falling off of 6,150,463

short tons in quantity and of \$58,080,853 in value. The average price of all coal mined and sold in 1904 is given as \$1.27. The production of anthracite in Pennsylvania in 1904 amounted to 65,318,490 long tons, valued at the mines at \$138,974,020. The average price for marketed anthracite in 1902 was \$2.35, and \$2.50 in 1903.

Official circulars have been issued by the officers of the United States Rubber Company announcing a plan for the acquisition of the Rubber Goods Manufacturing Company, a company more or less identified with the manufacturing end of the rubber trade. A meeting has been called to ratify the acquisition, and authorize an increase in the capital stock of the company from \$50,000,000 to \$75,000,000.

The total output of the Baldwin Locomotive Works in 1904 was 1,453 locomotives, of which 1,352 were steam, 94 electric, and seven compressed air. During the year 286 locomotives were exported to the following countries: Argentina, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Guatemala, Hawaii, Japan, Korea, Mexico, New Zealand, Peru, Porto Rico, and South Africa.

During the last two years about five million mulberry trees have been planted in Argentina, which has now about ten million such trees. The production of raw silk will eventually become an important product of that country.

The Pennsylvania Railroad Company has awarded to the American Bridge Company a contract for twenty-two thousand tons of structural steel to be used in the construction of the Pennsylvania Railroad terminal in New York.

With last week's shipments of apples, the export season on this commodity was closed. Boston leads all Atlantic ports in the number of barrels shipped, the total shipment being 667,790 barrels.

The price of the best crude oil in Kansas since the agitation against the Standard Oil Company, has been reduced by the Standard, so it is reported, from \$1.36 to 57 cents per barrel.

General.

What the figures really mean when it is said that in the single battle of Mukden two hundred thousand men were killed and wounded on both sides, is put in equivalents thus by *Collier's*: Three hundred Iroquois Theatre disasters; one hundred and fifty Slocum disasters; eighty Johnstown floods; thirty Galveston floods; the total population—men, women, and children—of a city like Minneapolis; the population of the States of Idaho and Nevada combined; the entire Boer population of both sexes and all ages, of the two South African Republics which resisted the whole power of the British Empire for over two years. In view of such a prodigious sacrifice of human life, comments the *Literary Digest*, should not the Christian Powers strive to bring this terrific struggle to an end, and should not all followers of Jesus identify themselves with the efforts of the peace societies in this and other countries?

A series of discoveries of value to antiquarians and geographers have been made in the barren desert of the Fayoum by Mr. Seton Karr, the explorer. These investigations show that at some period the old Kurum Lake consisted of a chain of minor oases running in a northwesterly direction from the existing lake and about fifteen miles distant from the actual border line. The explorer brought to light a large number of millstones, plates for grinding meal, and flint implements of the Fayoum pattern, strewn over the whole length of the plateau lying parallel to the lake.

On the railways of the United Kingdom there is one locomotive and thirty-six vehicles per mile of line. In the United States there is only one per four miles of railway, and thirty-six vehicles per mile.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Nature of Omniscience.

C. W. CHADWICK.

THE natural tendency of the human sense is to bring Deity down to its own level of observation and belief. It willingly concedes that God knows all things, and since it reasons from the standpoint of the reality of that which is seen, it very naturally concludes that God must know evil. This demoralizing notion, that both good and evil constitute the nature of omniscience, seems to be more or less prevalent among all not acquainted with Christian Science, which brings to light the unity and completeness of good, and the consequent unreality of evil. The argument, that because God knows all things He must of necessity know all about evil, would seem to be very plausible from a human-sense standpoint, but like all human reasoning it falls short of the truth, and history has yet to record any benefit to humanity from believing in such a theory. On the other hand, we are painfully aware of much harm that has resulted from the acceptance of a belief which makes evil as real as good, endows it with divine attributes, and then, in order to justify itself, makes God responsible for its existence. Such a belief is fortunately no part of Christ's Christianity, and had it never been accepted by professing Christians, apostolic healing would not have been lost sight of. In discussing this subject there will be no effort to force conclusions, beyond expressing some convictions gleaned from individual experience in practice. The writer's first faint insight into the true nature of omniscience, as revealed in the Christian Science text-book, was to him truly wonderful, and so convincing that he has never for one moment since been tempted to believe that an infinite Being could know or become conscious of anything unlike good. It has dissipated all mysticism concerning Christian Science healing, and has furnished a sure and safe foundation for all subsequent work in his endeavors to lead others into an understanding of the truth.

A call once came to visit the bedside of one who was in a seemingly critical condition. Help must come speedily. Human sense argued strongly for the use of artificial means, but the practitioner held firmly to the one Mind. The human soon yielded to the divine, when this thought came, "God alone knows how to solve the problem; He can do all things, and more than this, He knows that this need is already filled." Even a faint glimpse of the omniscience of good was all that was needed. Conditions which in a few hours would have caused most intense suffering, and which invariably necessitate the employment of surgical aid, were soon dispelled and harmony realized by the patient. To sense a miracle had been performed, while the Scientist saw only the harmonious operation of divine law and government.

Upon another occasion a Scientist was called upon to declare the truth for an absent patient. The call was urgent, and there were several seemingly plausible reasons why the Scientist should not treat the case, but these were all silenced and the help given. The thought of God's

omniscience was paramount; it was realized that God knows no mortal discord, He is conscious of good only; with Him there is no need that is not already cared for. The prayer was effectual, the patient having experienced a marked change in physical conditions which had been pronounced incurable, and this, too, at the very time the practitioner was acknowledging the completeness and sufficiency of omnipotent good.

An anxious mother, who knew something of Science, once asked help for her son who had been operated on for what the surgeon called the worst case of appendicitis he had ever seen. He had informed the boy's mother that there was only one chance in a hundred for his recovery. The boy was practically unconscious and unable to ask for help when Christian Science was called upon for divine protection. The practitioner held firmly to the idea of a perfect God and perfect creation, knowing that God was not conscious of any surgical operation nor of any death-dealing mortal law, and, contrary to all mortal predictions, the boy quickly rallied and was healed. The boy and the mother know what did the work, and God has the glory.

In the light of such experiences and many others of a similar nature, the Christian Scientist can speak with somewhat of authority concerning the nature of omniscience,—the consciousness of absolute good. He judges not according to any human standard, but from the standpoint of positive, or spiritual knowledge, gleaned through "many infallible proofs." He reasons, not from physical effect to cause, but from spiritual causation to its effect. Through firm faith and trust in God's allness he approaches nearer and nearer to the divine presence, and the signs do follow, assuring him that his "labor is not in vain in the Lord." The more intimate this divine acquaintanceship, the more impossible does it become for him to believe that evil or sin is in any way identified with, sanctioned, or sustained by the infinite. Even on the human plane, the better we become acquainted with some noble-minded man or woman, the less inclined are we to think of such an one as being associated in any way with the consciousness of evil. How much more true must this be of God, who is infinitely good? In "Unity of Good" (pp. 18, 19), Mrs. Eddy makes it very clear that whatever God is conscious of must be a component part of omniscience. If He is conscious of sin, then sin becomes a part of His knowledge. Could man, then, ever expect to be free from something that God knows? Could his consciousness of evil be destroyed so long as this same evil exists in infinite Mind? Would any one naturally want to get closer to God if he knew this would bring him nearer to the very thing he desired to be free from? If in darkness, and we desire to get out of it, do we not turn to the light? If sick, and we yearn to be well, do we pray for more knowledge of sickness, or for more knowledge, or consciousness, of health? If in bondage to some sin which we loathe, do we strive for further knowledge of this sin? Certainly not, and yet this is precisely what we would be doing when believing that evil is in any way associated with omniscience, to which we look for deliverance from the thought of evil. We admit that God's knowledge is perfect, but if we thought that He had a perfect knowledge of sin, would we long to get closer to

this more perfect knowledge of the very thing we were suffering from? Furthermore, if we honestly believed God to be conscious of some sin that we are committing, could we consistently ask Him to become unconscious of it in order to remove it from our mentality?

Is it not this very teaching concerning Deity, that evil in all its phases is a component part of His knowledge, that causes men to fear and dread the presence of God? Is it not responsible for the un-Christian belief in a god of wrath and vengeance, repentant and changeable? Is it not this teaching which, in its attempt to endow Deity with human attributes, has caused thousands to renounce the faith and church of their fathers, rather than believe in a dualistic god? We are reminded at this point of a man who came to Christian Science to be healed of the morphine habit. The Scientist on two different occasions tried to talk to him about God's goodness and mercy, but met with very little encouragement. The mere mention of the name of God seemed to antagonize the man. Finally he said, "My parents were zealous Christian people, insisted upon my reading the Bible, and compelled me to attend church and Sunday School. I continually heard about a God who was angry with His children, and I was constantly thinking of the punishment that would be mine. I prayed, but prayed in vain. Finally I left home, and the Bible and church were forgotten. For years I have not looked to God for help. God has seemed to me to be an enemy rather than a friend. I have suffered everything, and more than once have been upon the verge of suicide. I don't believe that God can help me." The Scientist gently assured the man that the God of Christian Science was not what he had been told, and that a God who was all Love could not hate, but was ever ready to heal and to save. The man was then more than willing to be helped, so the work was begun, and God did the healing. No morphine was taken after the first interview with the Scientist, and best of all, after only a few weeks, just prior to leaving for another city to resume his work, this man voluntarily purchased a new Bible, and seemed greatly pleased to let his friends know what he had done. At last accounts he was still reading both the Bible and Science and Health. It is truly interesting to observe how readily such as he grasp the idea of God as infinite Love, who is of purer eyes than to behold evil, and cannot look on iniquity.

The furnace of affliction must inevitably bring home to all who try to serve two masters the recognition of God as Love, in whom is no hatred at all. To love truly is to reflect the divine nature; while to hate is to express the very opposite nature. Who would try to unite such opposite qualities and call the combination good? It is feeble human sense that argues for the validity of evil, and would have us think that good and evil, love and hate, blend in cause and effect. Can light and darkness dwell together? And is the light conscious of any darkness which it dispels? The very presence of light means the exclusion of darkness; so the law of good is one of absolute exclusion to all belief in evil. This could not be so if God were conscious of a power or presence which disputes His allness. The effort of mortal mind to find evil in the consciousness of God is like looking for darkness in a room that is full of light. As readily might it find frost in a furnace of fire, or air in a vacuum.

God-knowledge is a knowledge of absolute good. To know good is to be conscious of nothing but good. Wisdom forbids our eating anything from the tree of knowledge of both good and evil. This certainly points to the supremacy and reality of good. Since man is the image and likeness of God, it is right and lawful for him to know only what God knows; in other words, man can reflect nothing that is not found in the consciousness of God. God's thought or idea of everything is the only right thought, in other words, the thought of good is the only absolutely correct thought. Can infinite good radiate

any but good thoughts? What says the Scripture? "God is light, and in him is no darkness at all." "For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts."

Omniscience means infinite knowledge, or all Science. No one can consistently question the science of God's knowledge any more than he can the science of numbers. And since we can understand mathematics only as we eliminate all error and mistakes from the premises, so can we understand the Science of omniscience only as we rule out all belief in evil.

Mortals must gain a more comprehensive understanding of the word "all" before they can solve the meaning of omniscience. Probably no other word when applied to Deity is more shamefully abused than this little word "all." We say that "God is all," but do we even begin to comprehend what it means? Do we honestly believe that *good* is all in all? The Scriptures say, "Let every one that nameth the name of Christ depart from iniquity." In obeying this injunction lies the test of our discipleship. If we are really departing from evil, ruling out all faith and belief in it, giving it neither power, presence, nor reality, excluding it from thought, word, and act, then are we reaching out for a scientific, practical understanding of God's allness, and in this manner only shall we ever understand the true nature of omniscience, and feel its harmonious, energizing influence in the destruction of sin, disease, and death in individual consciousness.

Our revered Leader, in her little work, "Unity of Good," has borne most grateful and convincing testimony of the truly wonderful results in healing that were wrought through her at different times when she became spiritually conscious of God's omniscience, and as loyal disciples of Truth, striving to maintain the dignity and grandeur of our Cause, we have this to acknowledge in conclusion, that we have been able to prove for ourselves and for others that Christian Science is the truth, and we are convinced that no scientific healing can ever be accomplished without the understanding that God never created evil or permitted it to exist, and that it is no part of His knowledge; and, furthermore, we have proven that there can be no greater authority or inspiration for Christian Mind-healing than the spiritual recognition of God's infinitude of goodness wherein is no cognizance of evil. If God knew sin there could be no heaven.

"Judge righteous judgment."

EVELYN SYLVESTER KNOWLES.

FROM the beginning, mortal man has constituted himself a judge. He has judged himself, his fellow, his environment, the universe. Even the Almighty has not escaped the ignorant and presumptuous criticism of mankind.

Man's judgment, unless governed by Principle, has invariably proved fallacious. From the time that Cain misjudged Abel and sought to slay the troublesome exemplar rather than to follow the good example, until the present day, mortals have usually judged according to human standards,—necessarily involving human limitations,—and the inevitable consequence has been erroneous judgment.

One of the most plausible and least apparent disguises assumed by this form of error is inuendo, that subtle nothing which seems to result in such a profound something. It has about the consistency of a cobweb that clings so tenaciously to face and hair when unexpectedly encountered in a summer ramble; you can scarcely see it, but you feel its suggestive presence long after it has been swept away.

With the thinker inuendo has no weight. He will not believe until he has evidence, and this he refuses at second hand. He must know for himself. Then he recalls the words of his Master, "I judge no man," and is silent.

Again, unrighteous judgment is precipitated by false

accusation. With the unsuspecting man, plain statements are unquestioned. Honest himself, he cannot conceive that one would deliberately break the ninth commandment, and so he feels justified in judging the accused, forgetful of the injunction, "Judge not, that ye be not judged." Even when appearances uphold false testimony we are counseled to "Judge not according to the appearance."

Pilate, though not a follower of Christ, was nevertheless more faithful to this command than were some of his avowed disciples. Hearsay did not affect his estimate of Jesus' character. He judged the man before him by what he himself saw and heard. Prejudice played no part in that notable decision, "I find no fault in him." We have had scant patience with this early arbiter, but it certainly took some sense of justice as well as some courage to say this in the face of an accusing multitude.

If Moses' injunctions, "Keep thee far from a false matter," and, "Thou shalt not raise a false report," apply to-day, we must neither create nor propagate falsity. Years later, he who had been under the direct tutelage of the Master, lovingly formulated a similar command, "Speak not evil one of another, brethren. He that speaketh evil of his brother, and judgeth his brother, speaketh evil of the law, and judgeth the law." This would indicate that unless we can speak kindly of our brethren, it were far better, more Christian, to remain silent.

Still another provocative of unrighteous judgment is so-called justifiable condemnation. The accused is actually guilty of the wickedness attributed to him. Surely we may now judge and condemn! May we? Did our Master? "God sent not his Son into the world to condemn the world; but that the world through him might be saved." In accordance with this, he once said to a most culpable sinner,—"Neither do I condemn thee." In such a case freedom of judgment seems legitimate; but a little reflection lessens one's desire to assert the prerogative! Shall we never pass judgment, then? Shall the manifestations of error be regarded with the esteem and love accorded those of Truth? By no means, if John speaks advisedly. "Judge not according to the appearance, but judge righteous judgment."

There are two extremes of thought equally deplorable. One is the outgrowth of a suspicious mind; which is always seeking to uncover error, to fasten upon some unworthy motive supposed to prompt the simplest statement or act. Accepting without question the weakest circumstantial evidence, it misses much of the good in a developing character, and all the good in what it terms a depraved one. The other extreme is represented by the man who is ready to overlook even the grossest forms of evil. His indisposition to consider "the error side," discloses an innate fear of the very evil for which he oftentimes becomes an unconscious channel.

It is apparent that neither of these mentalities can "judge righteous judgment." To weigh with nicety the two sides of a question demands great breadth as well as depth of character. Self steals in under various guises to tip the beam away from absolute justice, but blessed with that rare and special gift the "discerning of spirits," guided by impartiality, one is equipped for the duty of right judgment, whereby he will condemn not persons, but impersonal evil. It is not wicked people that he hates and good people that he loves; it is the evil and the good manifested by them which is the basis of his judgment.

This discriminating thought is illustrated in all our Master's career. He never seemed to lose his interest in those about him, though he must have clearly recognized the frequent unworthiness of their conduct, the selfishness of their motives.

Christian Science opens the blind eyes, educates humanity up to a divine standard of perception,—the loving of goodness rather than of what we conceive to be good; and this Christ-like discernment alone will enable us to

"judge righteous judgment." "Let us not therefore judge one another any more: but judge this rather, that no man put a stumblingblock or an occasion to fall in his brother's way."

Pensions Given Up.

As its contents indicate, the following letter was called forth by the testimony of Mr. Robert Waddell, which appeared in the *Sentinel* a few months since and which is referred to in another column. Its tone shows that Christian Science meets a need, not otherwise supplied, for a religion which is sustained by the proofs of healing, as it was in the time of Christ Jesus.—Ed.

Department of the Interior, Bureau of Pensions.

Washington, March 13, 1905.

Mr. Robert Waddell, West Mitchell, Ia.

Dear Sir:—Your kind favor of February 17th, in response to a previous letter of inquiry of my own, came duly to hand. I thank you most sincerely for your letter, and frankly say to you that your case, in which the official record fully bears out all your statements made in the *Sentinel* of February 11, adds one more convincing proof to many others to which my attention has been directed,—that there is a real heaven in Christian Science faith and teaching which affects the every-day conduct and life of men,—an inspiration to lead a truer, higher, and better life.

I was permitted to draw the papers in your case, and with others in the Bureau, I read them with much interest. One statement which you made to the special examiner struck me forcibly, as it coincides somewhat with my own personal experience: "The cure of my disabilities was gradual, as I grew in understanding."

It is not quite a year since I became interested in the study and investigation of Christian Science, but in that time both my wife and myself have derived more physical benefit and healing than we did in all our lives before from drugs and doctors; and both intellectually and morally we feel that we have been "lifted up" into a purer atmosphere and strengthened for good works and right living. In my own case, I admit the understanding comes slowly. Many statements in Science and Health and other of Mrs. Eddy's writings I am as yet unable to comprehend, and only for the evidence of good accomplished, and healing actually done, I would, ere this, have given up troubling myself with further investigation.

I have been a doubter, a skeptic, an agnostic all my life, and never had any affiliation with any Christian church. I have read more of the Bible, and have thought more about Christ and his divine origin and teachings during the past year than in all the preceding years of my life put together, and I am nearly fifty-eight years old. I am going to continue my reading and thinking, and my attendance at the Wednesday and Sunday meetings of the Christian Science Church, and I hope for better understanding. I know that I shall derive some inspiration from association with these people.

I am an Iowa man myself and was formerly Superintendent of Schools for Harrison County. I received my higher education at the Iowa State University. My wife and I are regular attendants at the Christian Science Church and feel that we are uplifted, and benefited morally, mentally, and physically by the association, the influence, the reading. I am far from seeing my way as clearly as I could wish, but I feel that I am pursuing a proper course of unbiased investigation, and hope for more spiritual light—understanding—by and by as a reward for honest endeavor persisted in. I am confident of one thing, the whole weight of its influence and teaching is for good, for the uplifting and betterment of men and women.

Very sincerely,

S. G. ROGERS.

Pensioners who Want to Give Up their Pensions.

The United States Pension Office has been considerably embarrassed lately by the efforts of a number of pensioners to give up their pensions. The situation is said to be entirely novel, and the law does not provide for such a contingency. These pensioners are sending in their certificates, with letters stating that they are not entitled to draw this allowance from the government, and asking to be stricken from the pension rolls.

It is learned that by far the largest number of pension resigners are men who claim to have been healed of their physical disabilities by Christian Science.

One of the cases to come to the attention of the department was that of Robert Waddell of West Mitchell, Iowa. He wrote to Washington, sending his pension certificate, and asking that his name be dropped from the rolls, as he had entirely recovered from the disabilities which were the ground for granting his pension. He said he had been cured by Christian Science. The Pension Office officials suspected the man of a mild form of insanity and sent a special examiner to Iowa to look into the case.

The records showed that the original medical examination had shown the applicant to be suffering from "malarial poisoning and its results," among which were enumerated "stomach, liver, and kidney trouble, affecting the heart, together with frequent rheumatic conditions." On this showing Waddell was drawing fourteen dollars a month. The examiner interviewed the leading people of West Mitchell, and found no doubt among his fellow-townsmen of Waddell's sanity, and finally Waddell was himself examined and required to give his deposition. The examiner reported to the Washington office that the man was all right, and evidently quite well, and accordingly entitled to give up his pension, and he was dropped from the rolls.

Since then John Warnes Keyes, a dentist of Washington, D.C., has surrendered his certificate entitling him to twenty-four dollars a month pension. His reason is similar to that of Robert Waddell; namely, that he has been healed by Christian Science and has no right, as a well man, to be drawing a debility pension. Dr. Keyes is an active member of the Christian Science Church of Washington and well known in the community.

The Pension Office is not disposed to encourage the surrender of pensions. Commissioner Warner expresses his belief that the law did not contemplate the surrender of the pension, any more than it did the recovery of veterans from the physical ills which they might have contracted in the service. In order to discourage this recent and growing practice it will be the future policy of the office to decline to make public the names of veterans who give up their pensions.

As the law does not provide any method for canceling the pension of a veteran who has been restored to health, it will be the practice of the department to file the papers, and at the end of three years, during which no effort has been made to draw the pension, the pensioner will be considered deceased.—*Brooklyn (N. Y.) Citizen*.

With Bishop Burgess' extraordinary statement regarding Jesus' methods of healing, Christian Science takes issue. The assertion that Jesus "never performed a miracle when natural means would do as well," is an unthinkable proposition to the Christian Scientist. There is nothing in the Scriptural record of Jesus' work to lead us to believe that he ever resorted to other than purely mental or spiritual means in performing his cures.

To him, his work was not miraculous, or unnatural, but divinely natural; though healing without what Bishop Burgess calls "natural means," might well seem mystical then and now, to the materialist. The Christian Scientist

believes that to pray to God, Spirit, for healing, while at the same time holding on to God's opposite, matter, for relief, is to dishonor God, and illustrates the parable of the house divided against itself, which cannot stand.

There are many who think otherwise, and they are entitled to their opinion, but Christian Scientists should not be criticised for trying to be consistent, that is, for trusting God when they say they trust Him, and doing so without the medium of matter. The Apostle James wrote to the early church, "Is any among you afflicted? let him pray." He did not say, "Try natural (material) means first, and if that fails then try God." It is a pity that the absolute trust in God which characterized the apostolic era has been so notoriously absent from latter-day Christianity. Few will doubt that sickness is an "affliction," and it can hardly be questioned that St. James had bodily disease in mind when he bade his hearers pray. WILLARD S. MATTON.

Hartford (Conn.) Post.

In declaring that we should be "willing rather to be absent from the body, and to be present with the Lord," the apostle sought to show the need of lifting our thoughts above the material aspect of things and placing them so far as possible upon the spiritual. Christian Science teaches identically the same thing. Jesus said, "Take no thought for your life, what ye shall eat; neither for the body, what ye shall put on;" yet we are hardly justified in believing that he meant we should utterly ignore our every-day needs. Was it not rather an effort on his part to show his followers the need of fixing their desires upon "things above" rather than upon "things below"?

Christian Science asks no impossible thing of any man. It points out the way whereby happiness and health may be won here and now, and leaves it to the individual to progress as fast as he may choose toward the attainment of that state of mind wherein the physical recedes from its claims for constant care and attention; thereby giving him freedom to work out his own salvation.

ALBERT E. MILLER.
Bradford (Pa.) Star.

Christian Science is a radical departure from the beaten paths of traditional religion and medicine, from the letter to the spirit of the Christian religion, from the literal to the inspired sense of the Scriptures, and from the material and physical to the metaphysical in medicine as well as in religion. This is evidently a step in the right direction. It has already thrown the light of the Christ-healing into the sin and sickness darkened lives of unnumbered people, causing them to rejoice in this new-old understanding of the loving-kindness of our Father-Mother God, who, as the Psalmist sang, "Forgiveth all thine iniquities, who healeth all thy diseases." MILBERRY H. LINCICOME.

Reno (Nev.) Gazette.

Jesus Christ, by virtue of his immaculate birth, was literally the Son of God. His sonship, however, was not a monopoly; for he said, "Whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother," clearly indicating that not the flesh relationship, but obedience to God's will constituted man's title to sonship with God.

FEAR nothing, freedom least of all.
If wrongs appear, then blame the beliefs of sense;
The laws of God will prove a wall.
They stand in storm and serve for our defence.

The Lectures.

San Mateo, Cal.

Last Friday evening, April 7, Athletic Club Hall was filled with an enthusiastic audience which had gathered to hear Mr. Edward A. Kimball of Chicago lecture on Christian Science. The gentleman gave an earnest and convincing exposition of Christian Science, which was listened to throughout with closest attention. Mr. Loring B. Doe presided, and in introducing Mr. Kimball said,—

The honor of introducing the speaker of the evening has been conferred upon me and I consider it an honor to preside over this meeting, for it represents a philosophy wholly good and upheld and honored by the best thinking and most intelligent classes. A few years ago I would have declined to preside at a Christian Science meeting. I have, however, of late seen so much of good included in its teachings and practice, resulting in the bringing into the everyday life of men and women the aid of the Divine in human life, that I now regard it as a pleasure to so preside.

San Mateo Leader.

New York, N. Y.

A large gathering of intensely interested listeners heard the lecture on Christian Science, delivered by Bicknell Young of Chicago, last night [March 25] at First Church of Christ, Scientist. The speaker was introduced by Hon. William H. Wood, former Deputy Attorney-General, who said in part,—

Many people have tried to state their faith that all seeming, finite, individual identity is merged and contained in the boundless Infinite. Many people have endeavored to bridge the chasm that lies between human thought and Divine intelligence, and many believe that they have succeeded in those endeavors. So that in all stages of the world's history since man could write a record of what he was doing, we find teachers and preachers delivering to their fellow-mortals what they assert to be a message from Divinity. Whether they are right or whether they are wrong is not for me to discuss to-night.

Among those messengers to a sin and sorrow burdened world of whom I have spoken, is the Founder of Christian Science, and you have gathered to listen to an exposition of her teachings. While I am not a Christian Scientist, I feel that in justice this much ought to be said: Christian Science tends to make men better; its followers do not bear false witness; they keep the Ten Commandments; they live in a sweet and healthful moral atmosphere, and they lead happy, honorable, and wholesome lives.

New York American.

Philadelphia, Pa.

"Christian Science, the Provable and Practical Gospel of Love," was the subject of a lecture by the Hon. Clarence A. Buskirk of Indianapolis, delivered in the Academy of Music, last night [April 11]. Every seat in the vast auditorium was filled. Men and women, representing the best intellectual element in the city, were there, eager to hear discussed the tenets of Christian Science. Charles H. Fahnestock, First Reader in the Philadelphia Church of Christ, Scientist, introduced the lecturer, saying,—

The records of history furnish abundant evidence of the ceaseless but futile endeavors of mortals to discern and fathom the enigma of their own existence; what they are—whence they came—whither their destiny. Believing in a Supreme Being but knowing Him not, in ignorance of His true image, they have groped in darkness, some adhering tenaciously to a blind faith, many others wandering through all the labyrinths of doubt, discouragement and despair, into the torments of agnosticism and infidelity.

But the day-dawn is at hand; the truth of all ages is

being revealed as foretold by Jesus in His memorable words, "Ye shall know the truth, and the truth shall make you free"—free from the self-imposed bondage of belief in, and subservience to, material laws which are the procurers of all human woe, sin, sickness, and death. In our day and generation this prophecy is being fulfilled through the exposition of the Scriptures and the practical application of their true spiritual import, and it is possible for us to-day, in some measure, to know assuredly that "God is Love."

We are here this evening to have expounded to us briefly some of the ways in which a knowledge of this immutable divine Principle, Love, can and does solve the problems of our daily life.—*The North American.*

Worcester, Mass.

A crowd of about one thousand people gathered in Tuckerman Hall yesterday afternoon [March 26] to hear the lecture on "Christian Science: What It is and What It Purports to Be," by Bicknell Young of Chicago. The lecture was prefaced with a few remarks by Rev. G. A. Kratzer of Fitchburg, who recently gave up his pulpit to join the Christian Science Church. Mr. Kratzer said, in part,—

Last August I was suddenly and remarkably healed of a malady with which I had been afflicted more or less for fifteen years, and by which I had been for nearly a year incapacitated from any form of work or diversion. *Materia medica* and many other forms of treatment had failed to give me any substantial or reliable benefit. But after I was brought into the understanding of Christian Science I was healed in less than three weeks' time and have enjoyed perfect health for the past seven months, for the first time since I was eighteen years old.

Though I had spent eleven years in institutions of higher learning, and though I had been ten years in the ministry, there was much in the Bible, especially the so-called miracles, that had never been satisfactorily explained to me, and that I had never been able to understand. But in Christian Science these mysteries of the Bible have become as clear to me as the science of arithmetic. Thus I know and testify that the Christian Science text-book, *Science and Health* by Rev. Mary Baker G. Eddy, is exactly what it purports to be in its title. It is veritably a "Key to the Scriptures."

I can no more doubt the truth of Christian Science than I can doubt that "things equal to the same thing are equal to each other." The quest of every thinking mind is to classify the facts of existence and reduce knowledge to unity of Principle and practice. In Christian Science I have attained this quest, and I feel daily as Sir Galahad might have felt, had he been a real character, and had he found the Holy Grail. To those who understand Christian Science it is indeed the "greatest thing in the world."

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Amended By-law.

ARTICLE XXXVII.

IN BRANCH CHURCHES.—SECTION 3. The three largest branch churches in each State of the United States and in Canada, shall annually and alternately elect a Publication Committee to serve in each of their localities. Each county of Great Britain and Ireland, through its three largest branch churches, shall annually and alternately elect a Publication Committee to serve in its locality.

Each church is not necessarily confined to its own members in selecting this committee, but if preferred can appoint a Publication Committee, conveniently adapted therefor, who is in good fellowship with another Church of Christ, Scientist.

No Large Gathering in Boston This Year.

IN view of the fact that a general attendance of the members of The Mother Church at the Communion and Annual Meeting in Boston entails the expenditure of a large amount of money, and the further fact that it is important that the Building Fund of The Mother Church should be completed as early as possible, it has been decided to omit this year the usual large gathering in Boston, and to ask the members to contribute to the Building Fund the amount which they would have expended in such an event.

We all know of the loving self-sacrifices which have been made by many of the branch churches in transferring to this Fund the money which had been collected for the purpose of building church homes of their own, and it will thus be seen that the course suggested will not only hasten the completion of The Mother Church, but will also advance the erection of many branch churches, and we therefore feel sure that all Christian Scientists will gladly forego a visit to Boston at this time in order to contribute more liberally to the Building Fund, and thereby aid the progress of our Cause throughout the world. The seeming sacrifices which Christian Scientists have made in their generosity toward The Mother Church have been many, but they have each brought a blessing, and this further sacrifice of the anticipated pleasure of a visit to Boston will bring its blessing also. When all our members are privileged to meet in the completed edifice for which they have labored and loved, the joy of the occasion will amply repay them for what they have given up, and they will realize the fulfilment of the Scripture, "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

Christian Scientists have learned from experience that divine Love more than compensates for every seeming trial and deprivation, in our loyalty to Truth, and it is but right to expect that those who are willing to forego their anticipated visit this year, will receive a greater blessing—"good measure, pressed down, and shaken together, and running over." The local members, who have always experienced much pleasure in welcoming their

brethren from far and near, and who have anticipated much joy in meeting very many of them this year, will feel that they have been called upon to make no less sacrifice than have others; but we are confident that they too will be blessed, and that all will rejoice in the glad reunion upon the completion of the new edifice in Boston.

The Communion will be observed in The Mother Church June 11, instead of June 25 as recently announced, and the proposed arrangements for reduced railroad rates will not be made.

Moral Instruction.

THOSE who believe that crime is on the increase offer in support of their argument the news columns of the daily press. Others who combat this belief say that the apparent increase is due only to the greater facilities for gathering news. However this may be, it is certain that the world is in great need of a moral standard and that this standard should be set before the rising generation. It is, therefore, with great pleasure that we reprint the following petition, which has been circulated for signatures preparatory to presenting it to a school board. It is as follows:—

To the School Board.

Gentlemen:—As we believe that moral teaching is of even more value to the State than secular instruction, and admitting that in Public Schools there can be no definite religious instruction, we beg to present to your consideration the teaching of the Ten Commandments, as being entirely non-ecclesiastical and admittedly the only rules of invariable morality which the world possesses.

In view of the undisputed fact, that crime has steadily and regularly increased during the last fifty years, we petition your honorable body, as a preventive to this moral decadence, that the Ten Commandments shall be incorporated in the Public School curriculum, so that every child may know them by heart, and some text-book provided which shall explain and illustrate their principles.

The petitioners are right in saying that the Ten Commandments are "admittedly the only rules of invariable morality which the world possesses;" and we may add that every civil and religious code which is not founded upon these Commandments is a failure. Solomon said, "Train up a child in the way he should go; and when he is old, he will not depart from it," and the truth of this saying is so well recognized that it has long been the endeavor of educators to include in the training of children the moral as well as the intellectual. This being the case, there certainly can be no valid objection to the teaching of the Commandments, in order that every child may be familiar with this greatest of all moral codes,—so familiar with it that on all moral questions he may have no difficulty in choosing between right and wrong.

Mrs. Eddy in all her writings has laid great stress upon the Decalogue as the invariable rule of right moral living, and has given prominence to it in her teachings. The Commandments are taught to the pupils in the Sunday Schools of the Christian Science churches, because our Leader recognizes that Christian character must rest upon the sure foundation which this wonderful code establishes, and we assume that similar instruction is the rule in the Sunday Schools of all other denominations; yet this is not sufficient, because of the great number of children who are not within the reach of the churches. If the Ten Commandments were known and obeyed by all, our jails and prisons would be unnecessary and the present intricate machinery for enforcing criminal law would soon become obsolete.

ARCHIBALD McLELLAN.

"Ye shall be clean."

ONE of the distinctive features of the Temple service as ordained by Moses, was its requirements with respect to personal and ceremonial cleanliness, and the more one meditates upon the symbolic and suggestive meanings of these requirements the more significant they are seen to be. Their inclusiveness is indicated by Jesus' words when he said, "He that is washed . . . is clean every whit," and further by his scathing condemnation of those who, while painstakingly scrupulous as to externalities,—the cup and platter,—were indifferent as to the inner life,—the thought and motive.

His teaching that purity must characterize every aspect of the Spirit-impelled life, the within and the without, the impulse and its expression, the thought and its statement, was clearly apprehended by Paul, when, after giving the most glowing picture of our possible spiritual achievements, he exhorts that we "cleanse ourselves from all filthiness of the flesh and spirit, perfecting holiness in the fear of God."

The recognition of the unseemliness of material disorder—dirt—grows in human sense with the advance from a crude to a cultured civilization, and a people's rank is, therefore, accurately determined by their interest in sanitation. Paul's injunction, however, takes note of both "flesh and spirit,"—person and mentality. It lays emphasis upon the comprehensiveness of the purity of the Christ-ideal, over against the old Phariseism, still extant, which takes the utmost care to keep itself from pollution without, while constantly indulging defilements within.

How often have we begun the day with a bath, and having made all our appointments clean and wholesome, proceeded to open our inner courts to the tidal sewage of the world's abnormity until its contaminating debris has been deposited in every fair cloister of thought,—yes, at its very altars! Surely, if consciousness is to become limpid to its depths, if we would be "clean every whit," then these corrupting streams must be excluded. He who lends a willing ear to sensuous suggestion and calumny, or to the daily description of the world's sicknesses, catastrophes, and crimes, is exposing his treasures to thieves and robbers. He is deliberately consenting to mental taint and moral despoliation, and here, as always, the highest considerations of self-interest re-enforce the call to a spiritual life.

Beyond this, the Christ-ideal demands that we shall not only resist the approach of evil, but that we shall always reflect the orderliness, congruity, and harmony of truth. Said Jesus, "That which cometh out of the man, that defileth the man," and we readily see that the expression of error must witness to fellowship, if not identity, with error; and that the habit tends to fix and intensify the thought condition which prompted the error's rehearsal. Cleanliness means conformity to law. It blossoms in scientific exactness, lucidity, and refinement of thought. Clearness, chasteness, and beauty of expression is the only fitting channel for right ideas, and not only impurity, but crudity and indefiniteness of statement should be classed as an offence from which we are to escape at whatever cost of prayer and patient endeavor. We do well to remember the old adage, "Nothing is more trying than dirt"—the dirt of confusion. That gossipy "inability to quit," which strings a lot of inarticulate ideas upon the single thread of chance association, never convinces, but often offends and repels; while "the conscience" of those who yield to this temptation, "being weak, is defiled." How pointedly Jesus rebukes the habit in his words, "Let your communication be Yea, yea; Nay, nay; for whatsoever is more than these cometh of evil."

Veritable facts, when placed out of their proper relation and balance, are sometimes misleading, and who can estimate the extent of the misapprehension of truth, the seriousness of the disadvantage to every worthy cause which has resulted from the indiscriminating or otherwise inadequate speech of its representatives? "I will sprinkle you with clean water, and ye shall be clean," is the promise, and

its fulfilment includes both the knowing of truth and its intelligible and winsome expression. There is no dirt—nothing out of place or out of keeping—in the domain of law. All things are subject to the Christ-idea, and if the Discoverer of Christian Science had spoken no other word, her impelling call for the manifestation of a more comprehensive and consistent Christian cleanliness in thought, word, and habit, would have made us all her debtors.

The divine order and ordering is "clean." In it alone is found strength, unity, authority, dominion, harmony, peace,—for it is in obedience to right. The teaching of Christian Science fundamentally establishes this order in thought, by discriminating between the real and the unreal, the actual and the seeming. All untruth, unreality, error is chaos, confusion, dirt, to be cast out, trodden under foot of men. All materiality of concept, and all unspirituality of life is to be put away, until the sense of self and the universe is wholly "clean;" then man appears, unsullied and uncorruptible as a summer sky, for the image of God is "like the substance of heaven in clearness." JOHN B. WILLIS.

Divine Deliverance.

IN a recent issue of the *Optimist*, a paper published in the State prison at Jackson, Michigan, it is said that a prisoner, while attempting to escape, fell from the sixth story to the ground, striking projections several times in his descent. It also says that "He had not been able to lie down for months previous, but the jar of the fall cured him of heart disease." The article closes with the trenchant advice, "Come here and jump off the roof if you have heart trouble." This was certainly a most unusual occurrence, but it is probable that many who heard of it would dismiss it from thought as simply a fortunate happening for the one who had the experience. There is, however, a hint of something else in the advice jestingly given to others.

This occurrence was a marked instance in which a greater fear overcomes a lesser, and it furnishes another proof of the unreality of disease. It is undeniable that disease has no intelligence to take possession of the human body, though no one ever disputed its authority to do so until Mrs. Eddy laid bare its false claims, by declaring in Science and Health that God, the only creator, never made disease or sin. Since her discovery of the Science of being a great change has taken place in human opinion, so that the mental origin of disease is now very generally admitted. It is also conceded by the most thoughtful physicians that any shock may produce very startling results, either for good or ill, according to the predominating sense of the patient.

While this may be admitted by Christian Scientists, it is at best only a partial explanation, for a shock is merely a negative condition. It cannot contribute anything which is positive or real, hence the belief that it can either help or hurt any one is based upon error. In the awful fear of immediate and certain death which would be experienced in falling from a great height, the lesser fear of possible death from heart trouble might vanish, never to return, but this would not explain deliverance from the effects of the fall. It is, however, more than probable that in a moment of extremity, thought would go out in vehement appeal to God, even if His aid had long been unsought, and no prayer to the infinite Father is ever in vain. Though the one delivered from disease or from deadly peril may not understand *how* he is delivered, the law of God, good, is ceaselessly and universally operative, else it were ill for mankind. "I am the Lord, I change not; therefore ye sons of Jacob are not consumed." In these words of the prophet we learn of the true source of security,—alas, that this should be so little understood! Even a momentary sense of truth may do wonders in removing a sense of danger, however manifested, but unless Truth

be understood and Truth's law obeyed there is likelihood of retrogression, and of continued bondage to errors even more obstinate than that which was overcome.

Through the clamor of conflicting human opinions we hear the voice of the Master, saying, "Ye will not come to me that ye might have life." And yet, not one who comes to Christ, Truth, for healing is ever sent empty away. One may be roused temporarily, by a mental or physical shock, from a mortal dream of sin and suffering, but this is not Love's way of deliverance,—as revealed in Divine Science, which makes clear the meaning of the promise, "He shall give his angels charge over thee, to keep thee in all thy ways. They shall bear thee up in their hands, lest thou dash thy foot against a stone."

ANNIE M. KNOTT.

Letters to our Leader.

Boston, Mass., May 6, 1905.

Beloved Teacher:—I have just had cancels printed, so as to get all changes up to date in the editions of Science and Health now on sale. The change on page 464 received to-day will be made in the next edition. Mr. Conant is ready to make corrections in the Concordance whenever you are ready for him to do so.

I see the great wisdom in your last change,—the divine wisdom which, foreseeing the evil, provides against it. Please accept my gratitude and love for your self-sacrificing devotion to divine Love and for your labor in behalf of humanity.

Your loving student,

JOSEPH ARMSTRONG.

Webb, Miss., April 10, 1905.

Mrs. Mary Baker G. Eddy, Concord, N. H.

My Dear Mrs. Eddy:—Months have passed into years since I first received benefit from your beautiful thoughts, and many times my heart has gone out in sincere thankfulness to God for one whose faith was sufficient to bring to us the glorious uplifting truths which are nourishing the hungry and thirsty ones of this and other lands. I will not intrude upon your time by attempting to tell of what Christian Science has done for me and for many that I love. I simply want to tell you of my gratitude and love, but words fail to express what my heart feels. My life must prove it by its loyalty to your teaching. I take the *Journal*, *Sentinel*, and *Quarterly*. I study the Lessons alone with God, and have some sweet meetings. I am the only Scientist in this place, but some are reading the literature.

Your loving student,

LUCY TURNER BARBEE.

Foxcroft, Me., March 18, 1905.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—Early during the session of our present legislature a bill was introduced by Senator Potter of Cumberland to amend Sec. 2, Chap. 119 of R. S., relative to manslaughter—said amendment to read as follows:—

"Section 2. Whoever unlawfully kills a human being in the heat of passion, on sudden provocation, without express or implied malice aforethought, or, being under the legal duty to care and provide for any child or other person, wilfully fails or neglects to provide for such child or other person necessary food, clothing, medical treatment or other necessities of life, thereby causing or hastening the death of such child or other person, or commits manslaughter as defined by the common law, shall be punished by imprisonment for not more than twenty years, or by fine not exceeding one thousand dollars."

While this bill was aimed to remedy abuses alleged to exist at Shiloh, where the sect called "Holy Ghost and Us" had colonized, the clause specifying "medical treatment"

was, of course, objectionable to Christian Scientists, and measures were at once taken to secure a just and proper exception in the bill. Some fifty people, representing the different Christian Science churches and societies in Maine, appeared before the Judiciary Committee, and owing to the interest manifested it was necessary to secure the House of Representatives for the hearing, in order to accommodate the large number present. Close and respectful attention was given to the testimony of our people; the witnesses were questioned and cross-questioned by the committee, members of legislature, and medical men present, and the answers given seemed to satisfy them of the following facts,—viz:

1. That Christian Scientists are not fanatics. 2. That this Science not only heals people, but that it also cures cases that have failed to yield to medical treatment. 3. That there is a distinction and difference between Christian Science and Mental Science, "The Holy Ghost and Us," and other sects with which it has been ignorantly classed.

Owing to the insistence of certain members of the committee that the bill should go through in its present form, it became necessary to carry on the "campaign of education," and for a period of several weeks literature was freely distributed, personal letters written, and every legislator interviewed by one or more Scientists. Finally the committee decided to accede to our demands and strike out the word "medical" in the fifth line of the amendment and make that part read "necessary food, clothing, treatment for the sick." We regard this as a notable victory, and the work incident thereto has stimulated a healthy interest in Christian Science all over the State. This has been augmented by our State press, which has kindly published a large number of articles giving statistical data and other matter relative to the Christian Science movement and its work at home and abroad. Not long since the writer received a letter from the Sunday School children of one of our churches. Feeling that it would give you joy to know of the loving, grateful, and generous thought of these little ones, and how well they are applying your teachings, I asked and received permission to send you a copy of the same.

Sincerely yours,

CALEB H. CUSHING.

First Church of Christ, Scientist,

Portland, Me., February 19, 1905.

Mr. Caleb H. Cushing, Christian Science Publication Committee, State of Maine.

Dear Mr. Cushing:—The Sunday School of First Church of Christ, Scientist, Portland, Maine, learning about the hearing of the Potter manslaughter bill before the legislature, are very much pleased with the work that you have done for the children of the State of Maine. We all believe that Christian Science heals children, because we have proved it ourselves. Twelve present to-day declared that they had been able to overcome error with Truth, in the way of demonstrating over pain for themselves when hurt and when sick; and thirteen had been healed of sickness by other Scientists. We know that Christian Science is growing, and will grow, and the children ought to be protected from any law that prevents them from having the treatment they want, if they believe that God will heal those who trust in Him. If the legislature had understood Christian Science as Mrs. Eddy teaches (Science and Health, page 494, line 10), they would know that there was no need of this bill. We desire to send you a token of our love, appreciation, and esteem for your services rendered for us. We voted unanimously to-day for our secretary to write you a note of thanks for the Christian Science children; and for our Sunday School treasurer to send you a check for fifty dollars from our Sunday School treasury.

Yours truly,

MERRILL HASKELL, Secretary.

32 Grant Street, Portland, Me.

Testimonies of Healing.

It is now over three years since I was directed to Christian Science by a kind friend, and was given health, peace, and happiness, when I had nothing but insanity or death staring me in the face, and I desire to express my gratitude and sincere appreciation for my wonderful healing in Christian Science. I had been afflicted with nervous insomnia, from which I had suffered for about eight years. I was healed of this, also of rheumatism and sore eyes. The doctor called the latter granulated lids, and said it would be slow work to heal them as I had neglected them so long that the trouble had become chronic. I had always been a delicate girl and was under medical treatment for about twelve years. I think my physicians did everything in their power for me, especially the last one, who was considered one of the best in the county, but after being under his treatment for two years, and finding only temporary relief, I became discouraged, and asked him if there was no hope for me of ever being healed. He told me I ought not to complain, that I was doing fairly well, that one of the richest men in Chicago had just died of the same trouble. My confidence was destroyed by that statement and I went home thoroughly convinced that there was no earthly help for me, that medicine could not heal the conditions brought on by worry and trouble. Then it was that help came from God, who had always seemed so far away. I cannot describe how peaceful I felt when I learned that He is near, and that I, as His child, had no cause for worry.

I am ashamed to say that I hesitated, and waited for six or seven weeks after this hope was held out to me. I finally decided to give Christian Science a trial as a last resort, with the result that after ten days I was entirely healed of insomnia and I have never taken any medicine from that day to this.

About one year ago a red growth appeared on one of my eyes. It was very sore and painful, and to satisfy my folks I went to the doctor and asked him what it was. He told me to come every day, and if he could prevent it from spreading over the sight, it would not trouble me, only so far as looks were concerned. I also learned that it could not be removed without an operation. Forgetting for the moment that Truth is all-powerful, I went home feeling very sad, but immediately on entering the house I took up Science and Health and began to read. I soon felt quieted and peaceful, and the next morning I wrote to the practitioner who had helped me and asked for treatment. In five days the growth had entirely disappeared, and since then Christian Science has been my only physician.

I am very thankful to God for the many blessings I have received, and to our beloved Leader, Mrs. Eddy, for giving us that wondrous book, Science and Health. That I may progress in the understanding of Christian Science is my earnest desire.—NETTIE IBSON, Nashotah, Wis.

Before hearing of Christian Science, I had many proofs that God hears and answers prayer, but these glimpses of the power and love of God were not understood, for every one seemed a great miracle and left me uncertain as to whether others would follow. Now, with the understanding of God that our dear Leader has given us through "Science and Health with Key to the Scriptures," I have the consciousness of God's unfailing care, and do not doubt that He is always leading me. It is very clear that because God is the only presence, the only power, He is able to supply all our needs.

Christian Science came to our home over six years ago in direct answer to prayer. Kneeling by the bedside of one very dear to me, I silently and earnestly asked God to show me the way to relieve this apparently hopeless suffering. It seemed impossible to witness the endurance of

such pain any longer, and medical aid had been sought for years with but little success.

An hour after, an old friend mentioned Christian Science to me, and although he was unable to tell much about it, I knew this was my answer, so did not hesitate to walk in the path opened. God's blessing surely followed, for to this member of our family came instantaneous healing, and the rest of us have since received our share. All God's promises are illumined through Christian Science, and we learn how to prove each one. We must look to our part of the covenant with God; He never fails in His. His laws are unvarying through all ages; it only remains for us to know and obey them.

EMMA ISABEL MCCracken, San Francisco, Cal.

With constantly increasing gratitude, I look back over the last two years and a half and realize what Christian Science has been doing for me. I came to it for physical help, after I had followed faithfully, and for a number of years, the advice and direction of many physicians, without receiving any permanent benefit. As anxious as I was to be well and strong, I would gladly have chosen rather to be lifted out of the dissatisfied and depressed mental condition I was in, had I thought such a thing was possible. For more than ten years, ever since I was quite a young girl, I had looked upon suicide as a possible and practical solution of my troubles. Everything I had taken up, hoping to find satisfaction in it, had proved unsatisfying, and I was tired and weary of the emptiness and aimlessness of life; and, through continued ill-health, of my growing uselessness.

Christian Science has not only given me physical health, but it has destroyed in great measure this depression and morbidness, for I have found in it an absolutely logical and satisfying explanation of being which takes away all the old weariness and aimlessness. It is teaching me to know God aright, how to see and love and help others, and, in proportion to my faithfulness to its teachings, has it brought me great peace and happiness.

I feel deeply grateful to God, and to Mrs. Eddy who has toiled for us with such wonderful courage and love.

MARIAN LAPHAM, Canandaigua, N. Y.

Hoping my experience will help some one who is suffering, I will tell of what seemed to be a serious accident, that happened to me while traveling on a loaded wagon, which was overturned, throwing me out. My head and side struck on a rock, cutting my head and breaking several ribs. I also received internal injuries. I was raised to my feet, but could not stand. My suffering seemed unbearable while lying on the ground. I felt that the wound on my head was not dangerous, although I was suffering badly from the effects of it; but all pain instantly left my head and never returned, not even when the doctor, who was called, probed the wound. My fear of internal injuries was, however, very great, as neither my head nor limbs could be moved without loss of breath. Being in an out-of-the-way place I could not call a practitioner to treat me, but I kept declaring the truth the best I could. I only let the doctor bandage my side, and I would not use any medicine. In less than a week I was up at work, but a reaction seemed to set in, and I was suddenly prostrated. A doctor was called in who pronounced my condition so serious that I could not live. He said my liver was so badly injured that it had failed to act, and that inflammation had set in. He did not offer me any medicine; he seemed to think it of no use, but I was not alarmed at his opinion, and had a Christian Science friend telephone to a practitioner at Eureka Springs for treatment. I was easy and asleep in fifteen minutes after she answered the telephone.

The treatment was kept up about two weeks and for

seven days there was no proper action of the bowels, nothing but blood was passed; then everything became natural. I was restored to perfect health in two months after the accident. I could do as much hard work as I ever did and have remained well since.

I cannot close without expressing my heartfelt gratitude to God, and to our beloved Leader and Guide for the unspeakable blessing of Christian Science.

ELIZABETH LINSOTT, Omaha, Ark.

Nearly five years ago I began to investigate Christian Science. Some copies of the *Sentinel* had been loaned me, and I became quite interested. Then I borrowed a copy of *Science and Health*. The Bible had seemed to me a book of mystery, but since I have become a student of Christian Science it has been my daily companion, and in every trouble I turn to it and find therein the healing balm. The blessings that I have received from the study of Christian Science are beyond expression,—the spiritual uplifting being the most beautiful.

I had been in poor health for a number of years, suffering from female complaints in their worst form. Life seemed to be a burden. I had taken much medicine, and my stomach was in such a condition that I could not retain even a mild laxative without its bringing on fainting spells. Such was my condition when I commenced the study of Christian Science, and what a wonderful change it brought. One by one my ailments dropped away, and then I commenced to realize that I was indeed free-born. Harmony now prevails where previously error seemed to reign. On one occasion I was awakened early in the morning with a severe attack of chills and vomiting, and toward evening the suffering became intense. I was aware that the cause was premature parturition. I sent for a practitioner, and I had not been treated more than half an hour when all pain ceased, and in two hours I was out of danger. Not until the next morning did I realize that I had been snatched from the grave, as it were. Mortification had set in, and parts of the body had become discolored. God is all in all, and "in him we live, and move, and have our being." While I give God all glory for my healing I ask that divine Love may reward our beloved Leader, Mrs. Eddy.—MRS. A. R. WILLIAMS, Scranton, Pa.

When Christian Science was first presented to me I was under the doctor's care. I had consulted about fifteen physicians in eight years for throat trouble, dyspepsia, and constipation of very long standing. I had tried every possible remedy for these ailments without any satisfactory result; in fact, I had been a sufferer since my early childhood. At the end of two weeks' treatment in Christian Science my digestive organs were in perfect order and I had forgotten that there ever had been such a thing as a diseased throat and weak lungs. I grew much stronger at once, and was able to accomplish whatever came to me to do, whereas, before I knew of Christian Science, I used to be so worn out at the end of each school year that I was ready to break down, and at one time I had to give up teaching for several years. It is now ten years since I was healed in Christian Science and have neither missed any lessons nor once resorted to *materia medica*.

The physical healing brought great happiness to me at first, but it was soon proven to me that the true sense of happiness or peace only comes through the renewing of the mind, the giving up of the human will, self-love, self-righteousness, etc. Some conditions yielded quickly to the truth, whereas others took longer; and in my struggle to overcome them I have learned to hold always before me the ultimate, that is, victory over the "adversary," and this has given me great strength and courage to press on. I wish to-day that I had not been so reluctant in sending my testimony to the periodicals and had sooner obeyed the

scriptural command, "Bring ye all the tithes into the storehouse." In failing to bring our mite, are we not withholding our gratitude from God, depriving ourselves of the joys of giving, and shutting out from our consciousness the blessings which a grateful heart always receives? In giving unselfishly our dear Leader shows us such a beautiful example, and we can pay her no greater homage than to follow the Christ as she has followed him. In loving God with all our heart, with all our soul, and our neighbor as ourselves, we shall be able to help humanity in healing the broken-hearted, the sick, and the sinful.

ALICE TOURNIER, South Orange, N. J.

I had been troubled annually with an ulcerous growth all along the lower jaw, which lasted from two to four weeks and caused great pain and inconvenience by discharges, which kept me in the house for a few days together. Four years ago when this made its reappearance I went to a practitioner and had one week's treatment. The trouble disappeared, and has not returned since. I now look back with gratitude to the patience with which I was shown the unreality of sickness and the blessing of health and harmony which divine Love gives if we are willing to accept it.

After this the appetite for intoxicating liquors, and all pleasure in the company with which it surrounds one, left me, and my life opened up with better surroundings and conditions. Later, I suffered from quick consumption, which had been brought on by my habits of dissipation. This was overcome without my absence from business for a single hour. With deliverance from this disease came also the dislike for tobacco, to which I had been greatly addicted for six years. Since then, through the earnest study of the Bible and our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been able, with a little understanding, to meet many cases of sickness which have come to my home. The sense of peace and happiness which we experience in the degree that we reflect divine Love to those around us, and the knowledge that we have dominion over all obstacles, is cause for constant gratitude to God, and to our beloved Leader, for her life of self-sacrifice in giving to the world this practical truth, named Christian Science.

A. ROE, New York, N. Y.

Christian Science, as taught in *Science and Health*, came to my home some thirteen years ago through my healing. I had been a great sufferer for many years, and tried all material aid, until I was told that nothing but an operation could help me, and that this was very doubtful. I had three small children, and could not consent to the operation, as my fear was so intense that even the thought of it would make me tremble. But man's extremity is God's opportunity, and so it was with me. I had no faith in Christian Science, and only consented to take treatment after my husband implored me to try it. As soon as I took treatment, the sweet influence of the truth was felt; as my mental condition improved, the physical troubles vanished and I was healed. Two years later my youngest child was born. She is now eleven years old, and has never taken a drop of medicine. Truth has been our only physician all these years. I have had trials, but have never trusted in vain.

I wish to say to all who are suffering, Take Christian Science into your homes; read and study the little book, and it will be a blessing to you as it was to me. It makes clear what Jesus meant when he said, "Ye shall know the truth, and the truth shall make you free." This truth is for all God's children, and it does make free. I feel very grateful for Christian Science, and to our dear Leader, Mrs. Eddy, who so patiently has shown and is showing us the way which leads to God, who is Love.

B. L. MAYNE, St. Louis, Mo.

We became interested in Christian Science about four years ago through the healing of some of our neighbors. My husband had been suffering from hemorrhage of the lungs for some time, and was getting ready to go West for his health when a neighbor told him how he had been healed through Christian Science. My husband then thought he would try Christian Science before going West. He did so, and was healed in two weeks' treatment, of lung trouble and Bright's disease. While he was taking treatment, our little boy was also treated absently for hip trouble and was healed in three weeks. He had been troubled with running sores for four years and was unable to walk. I have been healed of female trouble by reading Science and Health.—MRS. WM. CAMPBELL, Hurdland, Mo.

I have been lifted from the bottomless pit, after many years of sickness, suffering, and mental darkness. Christian Science rolled the clouds away, when I found health and happiness. For fifteen years I suffered untold agony and misery with Bright's disease, rheumatism, gall-stones, and other serious complications. I was under the care of a number of physicians; always taking medicine, and doing everything possible to gain relief, but it was of no avail, until, as a last resort, I turned to Christian Science and was absolutely healed in two treatments. This was more than six years ago. I have not taken medicine of any kind since, and have not had a return of any of the old troubles. I have not only health, happiness, and contentment, but I have found the Christ, which is more to me than all. Because of what I have received, I feel it my duty to commend this blessed truth to all who are suffering and in darkness. It is for all, if they will only listen to the Shepherd's voice when he says, "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

My heart is filled with gratitude to God, to our dear Leader, Mrs. Eddy, and to all who have given me a helping hand.—LILLIAN R. HALL, New York, N. Y.

While sitting one afternoon at the base of Eifel Tower, and looking up at that wonderful structure, the thought came, that if one who lived two centuries ago were seated beside me, and were told that he could reach the top of this tower safely, he would probably not believe it, and would refuse to take the journey. But if he remained long enough, and watched the elevator ascend and descend safely through the lace-like network of iron, his belief would be changed. Then I caught a glimpse of what it means to know that divine Principle, infinite intelligence, is able to make the things of Spirit as real to us as the things of materiality have seemed to be.

I should like to tell of one of the many demonstrations that have come to us through Christian Science. My sister and I had what the material senses would call poisoning from something we ate. A short time after dinner, while preparing to go out for the afternoon, I was suddenly taken very ill, and I tried to realize the Truth of being and the nothingness of this seeming condition of inharmony. In a short time my sister was affected in the same way, and for a while we thought we should have to send for help; but knowing it is Truth that does the healing, I sprang from the couch and read Science and Health just as long as it was possible for me to sit up, and this is what came from the reading. I realized that there is nothing to fear, because God is the source of all being, and my sister said, "What can there be to be afraid of?" In a short time the suffering was overcome and we were free from this nightmare. Then I read from our text-book until it grew dark, and with such a beautiful realization of God's protecting love and care that when supper time arrived I knew that material food had no power to harm us. We ate our supper comfortably and had no after effects from this attack.

I wish to express my gratitude to our Leader, Mrs. Eddy, who has led the way in the demonstration of this great truth.—LUCETTA CANFIELD, Paris, France.

I wish to tell of my healing through Christian Science from the grip, with which I suffered every winter for eight years. During the winter of 1899 I had an unusually severe attack, and although I had been told of Christian Science by a neighbor, I did not give it much thought until I had been under the physician's care for three weeks. At the end of that time I determined to take Christian Science treatment and called on a practitioner. I received benefit from the first treatment and was entirely healed in a few weeks. Before being healed by Christian Science I was a very miserable woman indeed. I seldom read the Bible, as I was not satisfied with the teaching I had received,—of God's ability to save, and the devil's power to destroy man, both soul and body. Christian Science has enabled me to see and prove in a degree that God is our help in trouble, and our protection against evil; that we can depend upon God's power and willingness to heal sickness, discouragement, or discord of any kind. Christian Science has given me a peace of mind I never possessed before, and has opened up the Bible in a manner that reveals God as an ever-present help in trouble.

I am very grateful for the many blessings I have received from this truth. I have found that "Science and Health with Key to the Scriptures" by Mrs. Eddy, unveils the Master's teaching and makes it practical for our needs.

MRS. MARY E. MAHAN, Galena, Kan.

Before I knew of Christian Science I had to be very careful as to my food on account of dyspepsia. I drank beef juice for breakfast, was afraid of coffee and tea, and lived on a diet consisting mostly of meats. After nearly every meal I thought I had to take medicine to insure proper digestion. This has all been changed by understanding Truth as revealed through Christian Science. I now eat what is set before me, without a thought of discomfort. I write this to express my gratitude for freedom gained in this respect, and to help others who may be struggling in the same mists above which I have been lifted. I must say, however, that the half was never told. The spiritual awakening I have gained in Christian Science so far exceeds the physical as to be all in all to me.

LUCY HOLTZCLAW, Chattanooga, Tenn.

A few months ago I was a great sufferer from indigestion, eating hardly anything without severe pain, and I had a fear of everything I ate. My physician had given me all the medicine for that disease that he could, but nothing seemed to do me any good. A Christian Science practitioner, who was a friend of ours, boarded at the same place I did, and I asked him to help me. He did so, and in one treatment I began to feel better. I had about two weeks' treatment, and am glad to say that I am entirely well, eating anything and everything without feeling the least discomfort. Since then, I have been treated for several other ailments, receiving the same benefit. I have become greatly interested in Christian Science. I feel deeply grateful for having the true way of life pointed out by Mrs. Eddy.—LAURA EDITH DIX, Baltimore, Md.

I would like to say that I was in great bondage to the sense of sickness, sin, discord, and trouble, but, through the study and application of Christian Science, these things are fast disappearing. Words could never express the gratitude I feel, but I will strive to so live Christian Science as to show forth the praises of the Lord.

MRS. CHRISTINE KELLER, Joplin, Mo.

From our Exchanges.

If we grant the goodness of God, then the endless life of man follows as a necessary corollary. For if God is infinitely wise and good, He will not annihilate man at death, cutting him off in the infancy of his powers. The reason and conscience in God will find their permanent expression in the reason and conscience of man. God will seek in man, possessed to some extent of like powers with Himself, perpetual fellowship. For man is continually finding himself able, with ever increasing approximation to the truth, to "think the thoughts of God after Him."

This implies that the human and divine have, to some extent, a common nature; just as man's power, partially at least, to transcend in thought the temporal, implies some relation to the eternal. It is hard to see how any being thus capable of entering into ethical relationship with God could drop out of existence without occasioning a definite loss to God, leaving a void in His experience that no other being could fill.

Each finite human person is a unique ethical being of far more worth to God than he is to himself. No other creature can take just the place he takes in his relationship to God. The value of man is, therefore, beyond all human calculation, for he is not only derived from God and sustained by Him, but he is the reflex of His own infinite powers. How can we possibly regard death as the termination of this relationship? Must it rather not be a mere incident in the earthly system of things, of no significance outside the physical order with which alone it is concerned?

PROF. F. S. HOFFMAN, PH.D.
Hartford Seminary Review.

The time has come, we believe, to define the attitude of the Christian Church in its reception of money for benevolent uses. A clear statement of its own judgment as to what is righteous and Christian in business and of the degree of responsibility it should assume for the character and business relations of givers, affirmed with substantial unanimity by Congregationalists, would lead to an ethical advance which the enlightened public conscience is being aroused to demand.—*The Congregationalist.*

It is a serious mistake to speak of the immanence of the Spirit as something less than universal, or to speak of His indwelling in the Christian heart as if it were a separate and distinct gift bestowed upon some and withheld from others. Monopoly has no place in the divine system. The Spirit is for all alike. The largest measure of His presence enjoyed by any is available for all. His fulness is always present, although it may not be always received.

REV. JAMES M. CAMPBELL.
The Homiletic Review.

No one who reads carefully the words of Jesus can avoid being impressed with the little condemnation which he has for the gross sins which fill the modern criminal code and exclude the perpetrators from modern good society. This was not because he would approve or condone in any way those sins, but because they did not indicate so deep and vital a departure from God as the sins of covetousness and extortion, of judgment and hypocrisy.

The Watchman.

Men are not left to the working of their own minds, their unaided conjectures, for the formation of an absolute standard, but have in Jesus a perfectly safe model after which to pattern their lives. But he is much more than an example, he is life. It is to be feared that some of us content ourselves with copying that which is outward and tangible in the life of Jesus, passing by the inner and essential; forgetting the spirit in the form.—*The Standard.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

In view of the fact that immigration this year points to the breaking of all records, indicating a total of over one million—one-eighth of the population of the United States—most of it coming from Italy, Hungary, and Russia, President Roosevelt is said to be considering the idea of presenting the problem to Congress as constituting a serious peril and urging drastic action. Two methods are under consideration, the limiting of the number of immigrants who can be landed in a month, and the increase of the head tax to a prohibitive figure. Immigration from Great Britain, Ireland, Sweden, Norway, Germany, and other countries furnishing desirable citizens is lessening, and is being replaced by an enormous immigration of the least desirable class from the three countries named. A combination of both propositions is also considered, and there is talk of an educational test. The immigrants, however, who can pass the educational test are frequently of the very worst class, while many immigrants who have little education are honest and intelligent.

The President's action will be based on the evidences of a conspiracy on the part of European Governments and the big steamship companies to unload their paupers and criminals on the United States, the details of which plot have been fully reported by Marcus Braun and other immigration agents who were sent abroad to study conditions. These reports are said to be so sensational that they have never been made public, being withheld by order of the President himself.

Speaking of American railroads, Hugh McLachlan, Secretary of the Railway Department of New South Wales, who has been in attendance at the International Railway Congress, said: "There is nothing about the study of your railroad system that is not a good lesson for us. I notice the current discussion is the Government regulation of railway rates. It is, of course, difficult for an outsider to discuss this subject, but what strikes me very forcibly is the fact that under present conditions America has far and away the cheapest rates in the world. It would be most difficult to attempt to lay down a scale of rates that would be applicable to the

enormous mileage of America. Your railway rates, especially for long distances, are something that foreign administrators admire. The public gets the benefit of them."

The appellate division of the Supreme Court of Rhode Island, after an existence of two hundred years, was abolished last week in Newport County, to be replaced by the Superior Court, a creation of this year's Legislature. In closing the last session of the appellate division, Justice Blodgett, in a brief historical statement, said that this court was unique in the history of the country, dating from the Protectorate of Oliver Cromwell and sitting through the reign of all subsequent kings of England, through the Revolution and down through the life of the Republic. For more than 150 years this court has been held under the same roof, while from the balcony the accession of kings had been proclaimed. Within its walls the Declaration of Independence was read for the State of Rhode Island.

The New York and Bermudez Asphalt Company has appealed to the full Court of Cassation from the decision of its President. Now that an appeal has been made, his decision must be confirmed by a majority of the Court to become effective. The judicial system of Venezuela is regarded as peculiar. United States authorities are investigating the case, and if it be found that justice has not been given will appeal directly through the State Department to President Castro himself.

The Chicago *Tribune*, presenting data of the Chicago teamsters' strike, which seemed to have reached a satisfactory adjustment on the 10th ult., states that on that date 3,772 strikers were involved, eight persons had been killed, 157 injured, according to police reports; there were 2,300 police on strike duty, 3,000 deputy sheriffs; the cost to the city and county for extra police and sheriff duty was \$60,000; the loss in wages to teamsters was \$435,000; the cost to employers, \$840,000; the shrinkage in wholesale, retail, and freight business estimated at \$6,000,000, and to concerns not directly involved \$5,000,000.

The Atlantic, Captain Barr, won the ocean race for the Emperor's Cup in record time. In 1899 the Sappho crossed in 12d. 9h. 36m.; the Endymion in 13d. 20h. 36m. Reports from passing steamers had placed the Hamburg in the lead. Her best day's run was 341 knots. Her time was 12d. 4h. 1m.

Judge Magoon was inaugurated Governor of the Panama Canal Zone on the 25th ult.

Foreign.

Official information from Tokio reports the virtual annihilation of the Russian squadron that was making its way to Vladivostok under command of Vice-Admiral Rojestvensky. Ten of the fourteen armored ships were captured or sunk, three of these being modern, first-class battleships. In all, seventeen vessels were sunk and five captured, representing a tonnage of 153,410. The complement of the ships is estimated at six thousand men, and of these two thousand were taken prisoners. The battle took place in the Straits of Korea, through which the Russians were passing in a heavy sea during a fog. The fog lifted and the battle was soon on. Vice-Admirals Rojestvensky and Nebogatoff were captured.

Empire Day (the anniversary of the birth of the late Queen Victoria, May 24, 1819) was more widely observed this year in London and the provinces than heretofore. Flags were displayed everywhere and there were special commemorative exercises in the schools. The most prominent feature was a big review of troops at Aldershot by King Edward, while the leading event in London was the unveiling in St. Paul's Cathedral by the Prince of Wales of the sculptured memorial designed and executed by Princess Louise (Duchess of Argyll) to the heroes of the Boer war.

Ambassador Choate last week unveiled a memorial window to John Harvard in St.

Saviour's Church, Southwark, in the presence of a large gathering, including the members of the American Embassy, Mrs. Joseph Chamberlain and the Archbishop of Canterbury. This was Mr. Choate's last public function in England. The American flag floated over the Southwark church during the ceremony.

The rates on the Suez Canal will be reduced January 1, 1906. It is estimated that this reduction will result in the falling off of revenue of \$2,000,000 a year. The reduction is to be made presumably in accordance with the original agreement, under which all profit above twenty-five per cent was to be applied to a reduction of the dues. The company is now paying dividends of twenty-eight per cent.

The publication of an authorized translation of the new treaty between Great Britain and Afghanistan last week is provoking considerable comment. Attention is drawn to the fact that by this new treaty Great Britain engages herself to protect Afghanistan against unprovoked attacks.

The cost of the British expedition into Tibet was \$4,003,750, all of which India will have to bear.

Industrial and Commercial.

It is reported that the steel rail pool, a combination to make prices and allot tonnage, has been officially dissolved. As the tonnage of the mills practically for the entire year of 1905 has been allotted, the action will probably not affect prices for several months at least. The mills in the agreement were the Illinois Steel Company's mills and the Carnegie mills of the United States Steel Corporation, the Pennsylvania Steel Company, the Maryland Steel Company, the Cambria Steel Company, and the Lackawanna Steel Company. The mills not in the combination are the Tennessee Coal and Iron Company's mills in Alabama, the Colorado Fuel and Iron Company's mills in Colorado, and the Republic Steel Company's mills at Youngstown. The official pool price since 1901 has been \$28, but prices for export trade for rails of the same grade are said to be considerably lower. The decision of the Administration to purchase supplies for the construction of the Panama Canal in the cheapest markets is understood to be responsible for the sudden action taken by the manufacturers.

Porto Rico has an area of 3,606 square miles, or about half the size of New Jersey. Its population in 1899 was 953,243, or about the same as that of West Virginia. Coffee is the staple product of the island, the product in 1903 being 33,450,000 pounds from a cultivated area of 170,000 acres. About 62,000 acres are devoted to sugar, from which 234,000,000 pounds were produced in 1903; 14,000 acres under cultivation to tobacco yielded 12,000,000 pounds; gold, silver, iron, copper, bismuth, tin, mercury, nickel, and platinum are found in the island. The annual production of salt averages about 10,000,000 pounds.

General.

What good roads they have in England! says Henry Van Dyke in *Scribner's Magazine*. Look at the piles of broken stone for repairs, stored in little niches all along the way; see how promptly and carefully every hole is filled up and every break mended, and you will understand how a small beast can pull a heavy load in this country, and why the big draught horses wear long and do good work.

A great cumulous thunder-cloud, towering up on the horizon like a huge, flamboyant iceberg, is often higher than the highest Alps would be if they were piled on top of the Himalayas. It is not unusual for these clouds to measure five, six, and even eight miles from their flat dark base, hovering a mile or two above the world, to their rounded, glistening summit, splendid in the sunlight.

In 1904 the consumption of horseflesh in Berlin reached 4,000,000 pounds.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Dynamic Religion.

REV. WILLIAM P. MCKENZIE.

HISTORY records constant vitalizations of religious thought, which were followed by corresponding attempts to express in dogma or creed a final statement of truth. Sometimes these statements have been used to bind the consciousness of men by assuming it to be sinful even to think otherwise than according to the formula. This is the statical idea of religion, making it like the iron bed which every one must fit, and this without regard to temperament, vision, hope, intuition, or character. The statical theory of the Church has inferred that truth was given, once for all, and that God's thought for man is exhausted. The aid of the Spirit to lead into all truth, to re-mind men of the teaching of Christ, and bring to remembrance the spiritual meaning of his works, need not be invoked, since the truth once given was formulated finally by men of the past. This thought is pictured in a window in a European cathedral, where a man is represented as descending to earth with a completed church edifice on his shoulders.

The dynamic theory of religion sets forth the Church of Christ as a power to uplift the fallen, strengthen the feeble, and discipline the weak until they find strength within. The body of Christ is that aggregation of believers in the Christ-truth who obey the impulse of the heavenly mindedness which Christ Jesus manifested, even as a man's body responds to his volition. There is progress in religion; the statement of it changes, but Christianity is satisfying only when it is the expression of the spirit of Christ, and when it has power, the vital power of love.

It is to be noted that the statements of religious truth have become less dogmatic and more spiritual. Intellect figures less, heart-kindness more. Not so much attention is paid to the creed the head accepts as to the deed the heart prompts. Men are not so intent on theory as they once were. In so many ways science has taught the value of proof and verification, consequently they now ask practical results even of religion. A sign of the times is the re-establishment of primitive Christianity, in which proofs came first, to "preach the gospel" and to "heal the sick" being regarded as co-ordinate commands.

Is it too much to say that religion should not only appease the spiritual longings of men, but also have power to bring ease and comfort where disease and distress have reigned? As its name implies, religion should "bind-back" from sin, it should also fill man's life with the joy for which he was seeking in a wrong way.

The teaching of Christian Science certainly reveals this dynamic influence in religion. It does what present-day denominational Christianity accomplishes, and more, for it proves what Christendom only promises. Instead of teaching submission to such negative conditions as disease, discomfort, unhappiness, and ill-health, it reveals the power which can "negate the negative," and "let the oppressed go free." No good does it take away or destroy. It rather unites all the good of one's experience with all the good of all times known and recorded of men, because it reveals good as Principle and cause. When understood, it is that to

which devout hearts in all ages have aspired. For workers in this movement, the loving wish in 2 Thessalonians is appropriate: "Wherefore also we pray always for you, that our God would count you worthy of this calling, and fulfil all the good pleasure of his goodness, and the work of faith with power: That the name of our Lord Jesus Christ may be glorified in you, and ye in him, according to the grace of our God and the Lord Jesus Christ."

Which is the Better Way?

MARGARET E. EASTON.

Thine, O Lord, is the greatness, and the power, and the glory, and the victory, and the majesty: for all that is in the heaven and in the earth is thine.—I CHRONICLES, 29: 11.

THROUGH the materiality of this age we are so accustomed to consider money a well-nigh absolute power, that we do not note its failures; we are not alert in watching the signs of the times. How often do we see the inadequacy of even vast wealth to remove or to alleviate intense physical suffering and deplorable domestic complications, or to heal its possessors and bring to them a sufficient degree of health to permit of their passing their days in even comparative comfort. While their comforts may be greatly enhanced, rich people come up to a stone wall of difficulty as often as do their poorer brothers and sisters. Apparently insuperable difficulties are distributed in human experience with more universal impartiality than is generally supposed.

Two pictures present themselves as I write, which, to my thought, very practically illustrate the superiority of the methods of Jesus over those of mortal man (be he a Cræsus or an Esculapius), in meeting all human need. The first case is that of a child born to the purple. The greatness of the father's wealth and the magnificence of his position were subjects of world-wide comment, but neither wealth nor position were adequate to purchase exemption from suffering and sorrow, for he drank as deeply of that cup as is given to humanity to drink. The birth of his child, instead of being a cause for rejoicing, was a source of anguish. Imbecile, deformed, and an acute sufferer, every effort to benefit him proved unavailing. The prayers of the dignitaries of his church, the indefatigable efforts of the most skilled physicians, did not aid the devoted father in his self-sacrificing endeavor to bring succor to his child—the heir to his almost royal titles and vast possessions. Where, then, was the much-vaunted power of money in the presence of such an appalling problem? We willingly admit that it was an auxiliary, through whose aid temporary surcease from suffering might be procured, but toward the establishment of permanent health it was not, nor could it be, a factor. Here, then, was this man, widowed (for his wife had passed on soon after the birth of their son), and worse than childless, with the crowning sorrow that his titles and possessions were to him practically valueless, for he had no direct heir.

The antithesis of this picture was presented at the time of the descent of Jesus from the mountain where he had passed through the illuminating experience of the transfiguration. In laying the broad basis of the system of ethical teaching and healing which bears his name, Jesus stands forth as the one whose life-task it was to show the

absolute efficiency of Divine power in the solution of all human problems. Devoid of educational advantages, as viewed from a twentieth-century standpoint; without wealth or position—in brief, minus all—and resting alone on God's immutable promises, Christ Jesus was capable of meeting and mastering conditions deemed insurmountable. In the records of healing referred to in the Old Testament, while there are evidences of a great advance toward spiritual healing, yet these instances go to show that all belief in materiality was not then outgrown. Take, for instance, the healing of the Shunammite's child. When the mother arrived at Elisha's house, the prophet immediately sent forward Gehazi with his staff to lay upon the boy's body. Later, when he himself came to the home of the faithful mother, he threw himself upon the little form, evidently hoping by this outward manifestation to aid in the resuscitation of the child. In the incident of Elijah's healing of the widow's son, there is also present a feeling of the need of some physical resource as an aid,—he took the child to his loft, desirous, undoubtedly, to be alone with God, as well as to remove his patient from the more timid faith of the mother, but even then the veil of sense was not fully rent to his understanding, for, as did Elisha later, he prostrated himself upon the seemingly inanimate form. In both instances, however, the predominant thought was tending toward divine Mind as the absolute healer.

In the story of the demoniac boy, as told by the Evangelists, Jesus had recourse to no form of materiality. He began at the root of the difficulty,—in the mentality of the father. For the first time in history a man was asked to believe that God is the sole source of every good and perfect gift, by whom alone his son could be restored. Let us revert for a moment to the consideration of the means used by the potentate of this day, referred to in the beginning of this article, and contrast them with those employed by the Master. In the former instance the father was probably never even asked to yield up his convictions respecting the afflicted child. It is likely that every possible effort was made merely to produce a physical change on the son. With what surprise would the magnate have greeted the suggestion that the healing of his boy should begin with himself. Incredulous as to the efficacy of any two-thousand-year-old method in comparison with the supposedly advanced appliances of the twentieth century, the proposition would have been considered as emanating from a disordered mind. The Judæan father, similarly situated with regard to *his* ailing child, found himself confronted with this persuasive yet puzzling condition, "If thou canst believe."

Let us now briefly review and summarize the contrasts, in the light of Christian Science. On the one hand was a man who could literally command all the resources of the world. On the other we have an Israelite who was presumably poor, and with none of the accessories of his modern brother. They had in common, human love and an eager desire to avail themselves of the best procurable means for the restoration of their respective children. The experience of the one was in the twilight of modern materiality; while that of the other was in the dawn of a budding faith in the Master-Healer. In the latter instance the action of Truth upon the afflicted boy was natural and inevitable. At first the boy was apparently worse, then he seemed as one dead, but at last he was healed, says Luke, and Luke had been a physician. To repeat the Master's words, "If thou canst believe, all things are possible to him that believeth." Christian Science teaches that the same Christ power is as truly available to-day, in all such cases, as it was in those instances which are recorded in the gospels. Healing is simply the elimination of false beliefs by the truth. False beliefs fetter, hold down, hence the significance of Jesus' words at the grave of Lazarus, "Loose him, and let him go." Which of these ways is the more logical, practical, or humane?

Our Debtors.

MARION P. HATCH.

AMONG the countless good things that Christian Science has brought to the world is an understanding of these words in our Lord's Prayer, "Forgive us our debts, as we forgive our debtors." Now we know that our debtors are the errors which we believe to be true, and that they are our debtors because they owe us for all their seeming power. Are you fearful? there is a debtor of your own creating—for no error can continue to exist for any man except through his instrumentality. The same with anger, pride, envy, selfishness, or sickness,—all your debtors if you give place and power to them. Christian Science shows how, through the reflection of divine Love, the forgiveness—destruction—of our debtors is brought about, also that it is our work, and that we should always remember when we pray, "Forgive us our debts, as we forgive our debtors," that we are asking a conditional favor—the forgiveness of our debts as we forgive our debtors. This is a vital point, for our debts and our debtors are identical, and to expect an answer without having done our part is useless.

Jesus said in the eighth chapter of John, "If ye continue in my word, then are ye my disciples indeed." As Christian Scientists we know these words of the Master to mean that only by understanding and demonstrating the truth as he was doing, can men destroy—forgive—their debtors. The destruction of sin along the lines thus indicated is the every-day work of Christian Scientists, and thus they continually preach the gospel of the kingdom of heaven as did Jesus and his disciples, "with signs following."

Immediately after the Master gave us the Lord's Prayer, he said, "If ye forgive not men their trespasses, neither will your Father forgive your trespasses." We learn in Christian Science that as we forgive—destroy for men, through our understanding of Truth—their debts,—their belief in sin as expressed in sickness, sin, impatience, etc.,—these trespasses are destroyed by our heavenly Father. But if we disregard this work,—fail to see the unreality of all forms of error for ourselves and for our fellow-men, and consequently fail to comprehend the allness of God,—neither will our understanding of our heavenly Father, what we know of Him, be sufficient to forgive—destroy—our trespasses, and until this condition is overcome, our "debts" and our "debtors" remain.

Wouldst thou content of a great victory taste?
Then render him who doth in heedless haste
Harsh words unto thee speak, an answer soft;
He needs the saving help of thy uplifted thought,
For his the scourging which to thee he brought.

The Amplitude of Christian Science.

GRACE H. WILMOT.

EVERY step taken in the Christian Science movement has been a progressive one. It is only necessary to note the phenomenal growth of its organization to establish the correctness of this statement. That such a very large body of people have accepted this new teaching within the last thirty-five years, is not only a proof of the strength of its organization, but is also a proof that organization is a necessary factor at the present time in the establishment and growth of any religious movement. The individualism which is expressed in the adage, "Every one for himself," has led, and still leads to lawlessness. Independence in a few leads to a condition of servitude and bondage in others; it fosters a spirit of socialism and anarchy, and thus becomes the animus of socialistic wars.

Historically considered, the French Revolution, that terrible outburst of popular discontent, was an attack on the social system rooted in the feudalism of the Middle Ages. The desire for "Liberty, Equality, Fraternity," led

men into a realization of the necessity for a more liberal and generous view of humanity, which should lie at the root of all organization.

The unification of humanity seems to demand organization, by means of which a relation of mutual dependence and mutual helpfulness is more perfectly established, and a better state of things, socially, politically, and ecclesiastically, is brought about, and in this lies the chief object of organization. The New Testament presents the Church as a living type of unity, and as a religious organization whose endeavor is to perfect this mutual dependence and mutual helpfulness according to the Messianic teaching.

Some time ago there appeared in the *Sentinel* a new By-law, the import of which demanded a radical departure from the popular methods that have seemed to be common to social, political, and ethical systems. In a later issue, there appeared an explanation of the requirements of this By-law, under the heading "Church Organizations Ample." The scientific thought has not been slow to interpret the deep meaning of all the methods which have characterized the guidance of our Cause. The one fact has been discerned, that in unity there is strength, and the greater the body or organization, the larger its influence in any direction; from which all see the necessity of moving together as a unified body.

The last half century has witnessed a greatly increased effort to effect organization. Theoretically, organization has one great object in view,—the establishment of a better state of affairs and a more perfect adjustment of the relationship that should exist between mankind. The man who at this time cries out against organization does not understand the situation. For the food he eats, the clothing he wears, every street-car ride he takes, and every check he cashes, he is dependent upon organization. On the social side we find clubs, societies, and orders for mutual improvement. No one denies that these have been the means of better educated thought and philanthropic interest in elevating the human race.

For years there has been one interested observer of all these conditions and efforts,—one whose whole heart yearned for the emancipation of mankind. From her spiritual vision she has seen the inadequacy of these modern efforts to completely adjust and perfect this relationship between individuals. She has also seen that, because of the corruption and the inefficiency of these systems to bring about the desired reform, the race must look to something higher to solve this problem, and from her we have received the declaration that the Church organization is ample.

All churches have for their original foundation the Messianic teaching. Creeds and doctrines may have obscured the intent, but the impelling motive of all church effort has been the recognition of one God, one Christ and Saviour. Here we must consider the divine Principle revealed by Christ Jesus. The Master founded his church upon one God—one God for all—and that God the Father of all. This fatherhood also established the brotherhood of man,—the unity of man,—mankind united in one. This was the foundation of the Church of the Apostles. The spirit of Jesus' entire teaching was breathed into the one line of the prayer he gave us, "Our Father which art in heaven." Not my Father, or thy Father, but our Father. The unity of Christianity is expressed in that one word "Our." It binds the holy desires, impulses, and purposes of individuals into one glorious effort for the emancipation of humanity.

The purpose of the Christian Science Church is broadly defined on page 583 of *Science and Health*. As convincing proof of the fulfilment of its mission, we have but to point to the sick who have been healed and the sinning who have been regenerated. In answer to John's inquiry, "Art thou he that should come?" Jesus pointed to the exhibition of his power to heal, and that answer has satisfied the world for two thousand years as to his Messiahship. One case

of healing or one case of sin overcome by the teachings of Christian Science is sufficient proof of its divine origin. Multiplied cases of desires born anew, hopes renewed, and larger spiritual aspirations point to the elevation of the human race by its means. This church teaches no selfish individualism, but enlarges our mutual usefulness and mutual dependence according to the Christ-teaching. We are all one body, having one aim, "On earth peace, good will toward men." This is not a mere doctrine,—it is our life, and demands of us our entire consecration. It requires time to learn how to obey the divine command, "As ye would that men should do to you, do ye also to them likewise," and it is only after hours of self-abnegation that we are able to accomplish this even in a limited degree.

The strife between capital and labor, the menace of the hour, would be settled; governmental differences would be adjusted; selfishness and corruption would disappear, upon the application of the Golden Rule. Philanthropic endeavor would find a better solution of the problem of social equality, if all understood God aright. There is not a phase of oppression or poverty, sorrow or suffering, that cannot be reached and alleviated through the teachings of Christian Science. Then as an organized body we should consecrate ourselves anew to this great work, and by deeper and holier efforts on the part of each individual convince the world that the solution of all problems lies in the right apprehension of one God. The twentieth century is hastening toward the realization of this fact. Victor Hugo graphically describes this advancing age in his great prophecy: "For four hundred years the human race has not made a step but has left its plain vestige behind. We enter now upon great centuries; the sixteenth century will be known as the age of painters; the seventeenth, the age of writers; the eighteenth, the age of philosophers; the nineteenth, the age of apostles and prophets. To satisfy the nineteenth it will be necessary to be the painter of the sixteenth, the writer of the seventeenth, the philosopher of the eighteenth, and it is also necessary, like Louis Blanc, to have that innate and holy love of humanity which constitutes an apostolate and opens up a prophetic vista into the future.

"In the twentieth century, war will be dead; the scaffold will be dead; dogmas will be dead; royalty will be dead, but man will live. For all there will be but one country, that country the whole earth. For all there will be but one hope, that hope the whole heaven."

[Written for the *Sentinel*.]

The New Day.

FLORENCE V. EDDS.

LORD, when the wistful gray of new day-breaking
Deepens to joyous gold,—maturer morn,—
Gladly my heart, its fears of night forsaking,
Turneth to Thee, in whom all hope is born.
Teach me to know, as ever Thou hast known,
I am Thine own.

When, in the glory of the clear noon hour,
With purer eyes and thought renewed, I see
The rose of Truth unfold to radiant flower,
And all of earth reflecting only Thee,
Teach me to labor for Thy sake alone;
I am Thine own.

Cometh Thy evening light! I thank Thee, Father,—
Thee, whom the nations of the earth adore.
Into that rest where Thy beloved gather,
Tranquil I walk with Thee, forevermore
Conscious of this,—Thy kingdom and Thy throne!
And I, Thine own!

Selected Articles.

God and His Likeness.

The likeness of Spirit must be spiritual, not material. While Paul said that flesh and blood cannot enter the kingdom of heaven, he taught that man can do so, and therefore implied that matter is no part or quality of the reality of man. "It is the spirit that quickeneth; the flesh [matter] profiteth nothing." That is, when the real and the true is brought to light in human consciousness, it will be found that Spirit is the only animating, and the only knowing or conscious fact of existence; that Spirit, not matter, is the only source or foundation of consciousness for man.

Jesus taught and proved for all time, that God, the divine intelligence, neither within Himself nor in the scientific operation of His laws in the human realm, so-called, possessed or imparted any element of evil, turbulence, or discord. Jesus healed disease and sin, but never produced them, or any condition from which they could spring. He quelled the storm, but never caused it. He voiced and demonstrated the unity and allness of good in Spirit; that in divine intelligence, no element or quality of evil, death, or discord can possibly exist or originate.

Christian Science thoroughly accepts this teaching of Jesus, and, both logically and Scripturally, draws the conclusion that sin and disease belong to the carnal mind, which is ignorant of God or Spirit, and can only be freed from the consequence of its ignorance by a knowledge of Spirit, not matter. This spiritual teaching and practice alone can bring to us the truth of Spirit which Jesus named the Comforter, whereby the human mind can be regenerated, awakened to that spiritual discernment which cancels human ignorance with divine wisdom, and with this ignorance go the ills which have sprung from the false belief in the material origin of man.

The inexorable and invincible logic of Jesus, that the good tree brings forth good fruit and cannot bring forth evil fruit, was his basic premise and is in line with the Principle of all divinely correct teaching and practice. The mingling of good and evil, of intelligence and non-intelligence, in cause or effect, is the result of the serpent lie of ignorance which the Christ-wisdom has come to destroy.

The great Preacher declared that the things of Spirit must be discerned spiritually; yet, ignoring this postulate of Paul, all worldly theories are endeavoring to discern and do the works of Christ materially, which is impossible. "Spiritual things must be spiritually discerned."

It is claimed that the study of hypnotism enables the learner to do either good or evil; whereas the understanding of Christian Science destroys both the desire and the capacity to work evil. Jesus' spiritual understanding so imbued his consciousness with good, that it was utterly impossible for him to accomplish evil. He could no more fail to heal and bless mankind, than the sun can fail to send out heat and light. His healing was not miraculous, but the natural and inevitable outflow of his communion with God through his clear recognition of man's eternal union with the divine Mind. To know God is to be imbued with good in the exact degree of this knowledge. Goodness can never be acquired or retained except by practising it. We must live what we learn of Christ or we cannot use it. This is fundamental in Christian Science.

Christian Science is not the control of one mind over another, and it does not give this capacity. On the contrary, it equips the human mind with power to resist control by other human minds. Its purpose is to elevate and illumine human thought up to the spiritual discernment of truth, whereby it can be guided and governed by God only. In the degree that the human is governed by the divine, it manifests love, health, holiness, order, peace, and wisdom.

It may be asked how a knowledge of Spirit can be obtained in this material age, with matter ever conspicuous

before material vision. We answer that the spiritual leaven planted in human consciousness by the Founder of Christianity in the first century, has been moulding thought for a higher and clearer perception of Truth, until the hour for higher mental activity and grasp has fully come.

The remarkable healing, through the prayer of spiritual understanding in Christian Science, now going on all over the world, proves the teaching and healing of Jesus to be scientifically true, and if it be the true way, no other can be absolutely correct. Whoever will study the Bible faithfully in the light which Science and Health throws upon it, if not too deeply immersed in the long-believed theories of materialism, will find that the divine Mind or infinite intelligence can be far more intelligently studied than can non-intelligence or matter, and with far better results. The supposition that intelligence can be acquired through the study of non-intelligence, is not supported by reason or experience, for life or peace have never been found in that direction. The faithful study of divine things by Christian Scientists during the past thirty years, and the honest and loving use of the knowledge thus acquired, has so quickened the human mind along the varied lines of intelligent activity as to startle the world with wonderful achievements in the control of matter.

The only evolution of the past, of which we have intelligent recognition, is the evolution or development of human mentality, to the control of which matter gradually yields. The supremacy of Mind over matter must ever constitute the basic premise of human progress and the goal of man, till spiritual perfection is won.

JOHN CARVETH.

Charlotte (Mich) Republican.

It has been well said that "The common sense that teaches us that the earth is flat, that the sun moves around the earth, and other obvious, visible facts is mistaken." But "the overwhelming majority of sober-minded, intelligent human beings" believed these so-called facts and disputed the correctness of the Copernican system when it was first presented, with as much earnestness as they now deny the spiritual teachings of Christian Science. Yet the Copernican system is now regarded as the scientific one, and the demonstrable truths of Christian Science are being accepted wherever they are fairly examined and tested.

Those who believe only in material methods may deny that a child who is "choking from a physical obstruction of the air passages" can be relieved except by physical means, but the Christian Scientist who has seen a diphtheritic membrane removed through Christian Science, after physicians had declared that the patient could not live, knows that such obstructions do yield to the power of divine Mind. And if after such an experience a child should again become sick, the parent could not justly be charged with "criminal neglect" if he continued to depend upon Christian Science alone for help; nor could he plead that if he tried only physical means and failed, that he had met his "full responsibility," for he knew of a power that had healed the child before when physical means had failed.

FRANK W. GALE.

Fresno (Cal.) Republican.

Denouncers of Christian Science will have some food for thought in the report from the United States pension office to the effect that a large number of pensioners have lately been giving up their pensions, claiming that they have been healed of their physical disabilities by Christian Science. The situation is said to be entirely novel, and the law does not provide for such a contingency. These pensioners are sending in their certificates with letters stating that they are not entitled to draw this allowance from the government and asking to be stricken from the pension rolls.

The Warrensburgh (N. Y.) News.

Among the Churches.**The Situation in Maine.**

The act defining manslaughter, in which Christian Scientists have been so much interested, has been passed by both Senate and House, has been signed by the governor, and has thus become a law. It is most gratifying to know that previous to the passage of said act it was amended in such a way as to be satisfactory to Christian Scientists.

CALEB H. CUSHING.

Cedar Rapids, Ia.

During the years 1903 and 1904, First Church of Christ, Scientist, of Cedar Rapids, Ia., sent to The Mother Church the sum of \$777.70. In 1903 the church purchased a lot for building purposes and entered into obligations to meet the payments therefor. Owing to this, the church has not contributed as much to The Mother Church Building Fund as the members desired. Now that the obligations for our lot are nearly fulfilled, we recognize the importance of directing every effort toward the completion of The Mother Church edifice, and at our quarterly meeting, on April 7, it was resolved that a monthly collection be taken for The Mother Church Building Fund, and forwarded to the Treasurer.

FANNIE K. KLIMA, *Clerk*.

Advance in Centerville, Ia.

April 19 was a red-letter day for the Christian Scientists here. On that day we gathered for the first time in a hall of our own. When the decision to make a change was reached, we had just six days in which to locate ourselves and exactly two dollars and a half in the treasury with which to do it. We were not daunted by these material conditions, but relied on Truth to guide us, and we feel that we have been divinely led.

Many noble sacrifices were made by the members, in order that this step might be taken, and so bountiful was our supply that we were enabled, while providing means for rehabilitating our new home, to collect forty dollars for The Mother Church Building Fund. Wednesday evening there were twenty-five present. The testimonies were uplifting and deep gratitude is felt by all, especially those who have labored long and faithfully to establish Christian Science in Centerville.—*Correspondence*.

Dedication in Highland Park, Ill.

First Church of Christ, Scientist, of Highland Park, held their dedicatory services on April 16, 1905. This was the first service in the new church. Many Scientists came from neighboring towns and joined with them in rejoicing and thanksgiving.

The members of this church have learned that right giving does not impoverish, and the treasury has contained sufficient funds at all times to meet every obligation. A spirit of love and unity has attended our growth and has been manifested in the erection of our church home. All are very grateful for this demonstration of Truth and Love, and we know all Christian Scientists rejoice with us.

Separated from the main body of the church by large doors which fold back and throw this space into the auditorium, is a home-like reading room on one side and a sunny Sunday School room on the other. Highland Park is situated twenty-three miles north of Chicago, on the shore of Lake Michigan, and has a population of thirty-five hundred.—MARION A. PATRICK, *Clerk*.

The Lectures.**El Paso, Tex.**

A lecture on Christian Science was delivered here April 27, by Mr. Edward A. Kimball of Chicago. The Temple Mt. Sinai was comfortably filled by a representative audience. The lecturer was introduced by Judge T. J. Beall, who said in part,—

We understand that Christian Scientists recognize and worship the one Supreme God of the universe, and enforce the doctrine of love to their fellow-men; that this church draws no sword to compel men to adopt its faith, or be happy with its hope; that while the profane look upon the earth and sky with that admiration which a beautiful picture always inspires, the Christian Scientists admire the picture of nature because God Himself has mixed its colors and guided the brush. And while others point to the advance of the arts and sciences as heralding the elevation and happiness of man, the Christian Scientists already see the renaissance of a religion in which heaven is ringing with the notes of love and joy, the triumphal song of the new creation.—*Correspondence*.

Caro, Mich.

Mr. Bicknell Young of Chicago addressed a large audience at the church on Tuesday evening, April 4, on the subject of Christian Science. Mr. Young was introduced by Mr. G. H. Slocum, who said in part,—

I desire to state that while I am not a member of the society under whose auspices this meeting is held, yet I do know, in common with the people of our progressive little city, that those who subscribe to this faith, and whom we know so well, are a progressive, intelligent, and moral people. Every lover of truth and righteousness, every broad-minded man and woman of this twentieth century, will welcome him who comes with a spiritual message, no matter under what name.

The conflict that has been waged between right and wrong for centuries past, still continues and will continue, and, if I understand the fundamental purposes of this people aright, their constant endeavor is toward the uplifting and upbuilding of mankind; therefore their assistance should not only be accepted but welcomed by all who are engaged in this seemingly unequal contest, on the side of right.—*Correspondence*.

Roxbury, Mass.

The lecture on Christian Science given at Fauntleroy Hall, on Monday evening [May 1], was greatly appreciated by the large and intelligent audience which filled the hall. The lecturer was Rev. William P. McKenzie of Cambridge. He was introduced by the First Reader of the church, Willis F. Gross, who said in part,—

If you are impressed with the message which is brought us to-night; if it inspires you with the hope that there is a remedy for the discords of earth, a divinely natural remedy; if you are encouraged by its sweet promise and desire to pursue your investigations farther, the opportunity is afforded you. There is no mystery in Christian Science save the mystery which enshrouds everything which is not understood. Christian Science can be understood, and when it is understood, it brings healing to the sick, comfort to the sorrowing, strength and courage in the hour of trial and temptation, and again is heard the Saviour's loving benediction, "Lo, I am with you alway, even unto the end of the world."—*The Dorchester Beacon*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"God loveth a cheerful giver."

Concord, N. H., May 10, 1905.

Beloved Leader:—Earnestly desiring to express our sincere gratitude for the many benefits showered upon us, and believing that we could do nothing that would be more pleasing to you than to heartily assist in the building of The Mother Church in Boston, a meeting of the members of the Concord Church was called, in November last, to formulate some plan for systematically contributing to that project. Previous to this time, individual members of the church had made generous contributions and the Sunday School was sending one half of its receipts to the Building Fund, but in order that all might take part in this labor of love, it was decided to procure envelopes, properly printed, and send them with an explanatory letter to each family, requesting that the offering be made the first Sunday in each month, beginning with December.

Notwithstanding the fact that we seemed to have all we could do, and more, to meet the increased expense necessary for the maintenance of our beautiful new church,—your splendid gift to us,—all contributed gladly, as was shown when the envelopes were opened and found to contain amounts ranging from one cent to one hundred dollars. Our own needs were supplied also, showing that "we must give if we would receive."

The net result of six months collections is \$1065.17, and we propose to continue in this way so long as the need exists.

With reverence and affection,

F. A. PIPER,

J. A. MOORE,

MRS. ANNA MEEHAN,
Committee.

MRS. EDDY'S REPLY.

My Beloved Brethren:—"God loveth a cheerful giver." "Oh how great is thy goodness, which thou hast laid up for them that fear [love] thee; . . . for them that trust in thee before the sons of men! Thou shalt hide them in the secret of thy presence from the pride of man: thou shalt keep them secretly in a pavilion from the strife of tongues." "The Lord is nigh unto all them that call upon him, . . . in truth."

MARY BAKER EDDY.

A Loving Gift.

New London, Conn., February 27, 1905.

My Dear Mrs. Moore:—Enclosed please find check for one hundred and seventy-five dollars, a most loving offering from the members of First Church of Christ, Scientist, of New London, Conn., to our beloved Leader, Rev. Mary Baker G. Eddy, to be used to purchase a cabinet to contain the beautiful edition of her works in her room in the Concord Church. Though this gift represents self-denial, it also stands for loyalty and obedience to the divine Principle of Christian Science, and a purified and chastened affection, whereby we are being enabled to appreciate the unparalleled self-sacrifice and love of our great Leader. May this cabinet containing our Leader's works, like the Ark of the Covenant of old, typify that spiritual consciousness wherein "If ye abide in me [Christ], and my words abide

in you, ye shall ask what ye will, and it shall be done unto you."

With love,

LAURA C. TUCKER.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., May 24, 1905.

First Church of Christ, Scientist,
New London, Connecticut.

Beloved Brethren:—I am for the first time informed of your gift to me of a beautiful cabinet costing one hundred and seventy-five dollars, for my books, placed in my room at First Church of Christ, Scientist, Concord, N. H. Accept my deep thanks therefor, and especially for the self-sacrifice it may have cost the dear donors.

The mysticism of good is unknown to the flesh for it is the fruit of the Spirit; the suppositional world within us separates us from the spiritual world that is apart from matter; and unites us to one another. Spirit teaches us to resign what we are not, and to understand what we are, in the unity of Spirit—in that love which is faithful—an ever-present help in trouble, that never deserts us.

I pray that heaven's messages of, "on earth peace, good will toward men," may fill your hearts and leave their loving benedictions upon your lives.

Affectionately yours,

MARY BAKER EDDY.

The Lesson-Sermons.

We are in receipt of an inquiry regarding the custom which prevails in some places, of preparing synopses of the Lesson-Sermons for the newspapers, and we are constrained to say in reply that while we believe the practice has grown up without any one intending to do harm, yet the giving out of these synopses is a menace to the integrity of the work of the Bible Lesson Committee, whose members have given much time and thought to the preparation of these Sermons.

The Lesson-Sermons are brief, yet comprehensive, statements of the doctrines of Christian Science as applied to given subjects, and it is impossible to elucidate these teachings except in the language of the Bible and Science and Health. It stands to reason that these synopses are very superficial, and we believe they may do more harm than good. They are at best nothing more than some one's personal opinion regarding the Lesson-Sermon; in other words, a sermon about a sermon. Should the practice of thus garbling the Lesson-Sermons become general, it would result in such diversity of thought as would seriously detract from the great benefit now derived from having an identical sermon in every Christian Science church throughout the world.

Every person who studies the Lesson-Sermons from the Bible and Science and Health must of necessity form some concept of their meaning and the lessons they teach, but this concept can be no higher than his own perception of the spiritual truth they contain, and whoever attempts to explain to others that which he may not have fully understood himself, undertakes a most difficult task. No one is authorized to give out his own limited views as a commentary upon the Lessons.

Another reason why these synopses are of doubtful value is that the space assigned to them in the newspapers is so limited that even if the persons preparing them have grasped the full meaning of the Lessons it still is impossible properly to convey to the public their understanding of them in this way.

One of the greatest advances in the unity of our Cause was inaugurated by our Leader when she established the present order of Sunday services, which include an officially prepared sermon; and it is now acknowledged by all Christian Scientists that the substitution of these sermons for the personal preaching which had previously prevailed, has placed our denomination upon a much higher and more

permanent plane of usefulness. The publication of such synopses as we refer to seems to be an effort to retain, in a degree at least, the old order of things, and it should be discouraged.

ARCHIBALD McLELLAN.

The Reading Room.

AMONG the various activities of the Christian Science movement, the Reading Room work has an important place, and all Christian Scientists are solicitous that nothing be permitted to hinder its efficiency. The Manual of The Mother Church provides for the establishment and maintenance of Reading Rooms, and if its provisions are carefully studied they will give the guidance needed for this work. It is expected that all our Leader's works, as well as the publications of The Christian Science Publishing Society, shall be on sale at the Reading Rooms, and that copies of each shall be available to those who come in to read.

There is perhaps no class of our people who have greater reason to value the Reading Room than have those who are traveling from place to place. They are always sure of a loving welcome, the true sympathy and cordiality which characterizes those who have proved the healing power of divine Truth and Love. The very atmosphere of Christian Science means good cheer. Having opened our hearts to the Christ-idea, we can do no less than welcome to our fellowship all who love the truth. It is to be remembered, however, that the Reading Room is not intended for Christian Scientists only, but for those as well who are seeking a solace for human misery,—an oasis in the desert of their earthly experience,—and true Christian tact is required in order to meet their needs effectively. While all appreciate a kindly welcome,—and this may be felt when no words are spoken,—many dislike to be questioned as to their interest in Christian Science. When visitors ask questions relating to the teachings of Christian Science, it is often best to point out some passage, or passages in our Leader's works which deal specifically with the topic advanced. It is needless to say that, as in all public libraries, quiet should be maintained; all necessary questions should be answered without disturbing those who are reading.

While it may be proper to tell others of our Lesson-Sermons, it is not advisable to read them aloud at the Reading Room, much less to discuss the topics embodied in them. One of the most important lessons in Christian Science is that which counsels us to let "the Spirit of truth" lead us "into all truth." The revelations of truth contained in the Bible and Science and Health are inexhaustible, and the possibilities of their application limitless. How much of each lesson may be appropriated by each individual can be measured by his diligence alone; by his growth and receptivity, not by the perception of another. The topic of each section is easily found by the careful reading of its first selection from Science and Health, and the intent of the Lesson-Sermon is to lift the learner above the plane of personal opinion, which should not be allowed to creep in under the guise of "an explanation of the Lesson." Truth always gives us all that we are ready to appropriate, and the specific and practical demonstration of the truth we gain from these Lessons will do much more for us and for others than will their attempted interpretation; "God is His own interpreter."

Above all, human will and personal opinion should be subordinated, while obedience to rules laid down and a sincere desire to be guided by divine wisdom should take their place. As with many other matters, local conditions must be taken into account, but these need never stand in the way of true progress. We should ever see and acknowledge that divine Love richly provides the means for His service, which service brings untold blessings to all mankind.

ANNIE M. KNOTT.

The Abode of Mystery.

HE who feels and rightly interprets the "witchery of the woods" these fragrant days, will have no difficulty in understanding the power of that spell which has rested on all primitive peoples as they have observed the phenomena of nature and of human experience. The unnumbered things about us which excite surprise and astonishment, and which suggest the nearness and activity of something unseen,—these inevitably beget a sense of questioning wonderment which often drifts far afield, and which is subject to the consciousness of demonstrable truth alone. In the delightful nature tales of "Hiawatha" and kindred folklore epics, we may see how credulous expectancy stimulates the imagination in ways that have ever brought the untutored under the bondage of superstition,—a bondage whose hereditary influence is seen to-day in the fascination for the many of anything that is weird or abnormal. It is not difficult to find even cultivated people for whom strange faiths and philosophies seem to have an irresistible charm, and the rebuke which Paul brought to the itching ears of the Athenian Agora is still demanded by an impulse which is very common, and often so religious as to fairly revel in the signs and wonders of a "mysterious Providence."

In common usage the word mystery signifies that which cannot be explained. It is the definitive characteristic of an effect for which no cause can be assigned or even conceived, and as thus understood it manifestly does not pertain to truth. Every statement and manifestation of intelligence can be understood, otherwise it were not of intelligence, and the appeal of mystery is therefore limited to the mentality of those who have not yet reached spiritual insight. To such, even the manifestations of divine law can but seem inexplicable, just as the formulæ which express the unsullied logic of a Laplace or a Bowditch, are unintelligible to all save the advanced mathematician. Paul speaks to Timothy of the greatness of "the mystery of godliness," and in writing the Ephesians he rejoices in his call to make men see what is the fellowship or participation of this mystery "which from the beginning of the world hath been hid in God." Elsewhere he declares that we are "stewards of the mysteries of God," and in all it is clear that he is not referring to unexplainable facts, but to those deep and saving truths, "the unsearchable riches of Christ," which are revealed to aspiring hearts through him.

The unintelligibility of godliness to mortal sense, is seen, in Christian Science, to result from ignorance of Truth and its expression (Science and Health, p. 145). The only abode of mystery is that false sense which objectifies its own false products, and which would attach them to the manifestations of Truth; and this impulse of error in human consciousness has marred our sense of the fairest things. Even the miracles of our Lord have been declared to be inexplicable though true, and that by Christian people. Indeed we are yet tempted to consent to the claim that there is a certain effective factor in personality, or formulæ, and the clearness and continuity of our understanding that the consciousness of Truth, the "Christ in you," is the only mediator, is oftentimes disturbed in this way. Against the subtilty of this error we all need to guard by knowing that the healing of Christian Science is the result of right understanding, and that in its every phase and aspect it conforms to divine law. This realization establishes faith in the declarations of truth, and protects from the mesmerism of superstition.

That evil is involved in mystery follows necessarily from the fact that it has no Principle and hence is without law and orderliness save as its counterfeit of Truth gives its manifestations this semblance. Respecting the nature and significance of the mystery of evil, Paul says, "For the mystery of iniquity doth already work: only he who now letteth will let, until he be taken out of the way. And

then shall that Wicked be revealed, whom the Lord shall consume with the spirit of his mouth, and shall destroy with the brightness of his coming: Even him, whose coming is after the working of Satan with all power and signs and lying wonders."

The endeavor to solve this mystery is an effort to find intelligence in non-intelligence, to bring order out of that which is inherently lawless. The only law to which evil is amenable is the law of its disappearance in the presence of good, of Truth. Metaphysically speaking, the mystery of evil is not subject to explanation; it can only be known for what it is. The moment the untruth to which mystery adheres is discovered, that moment mystery vanishes. It can have no fascination save to false sense. No truth-seeker can wish for it, and no truth-knower can find it.

Christian Science—the demonstrable knowledge of God—is our Saviour from all darkness and confusion. It alone dispels the untruth which is mystery's abode, and brings us to

that blessed mood
In which the heavy and the weary weight
Of all the unintelligible world
Is lightened.

JOHN B. WILLIS.

Prompt Action.

WE have just received a letter from Mr. E. Howard Gilkey, First Reader of First Church of Christ, Scientist, Columbus, Ohio, regarding the notice from the Christian Science Board of Directors which appeared on the Editorial page of our issue of May 27, and as this letter discloses a prompt and loving response to the course of action suggested by the Directors, we are glad to quote from it as follows:—

"An advance copy of the *Sentinel* of to-day having reached me this morning, I immediately called up the President of our Board of Directors by telephone, and he has agreed to call a meeting of our Board for to-morrow morning before church services, to pass a resolution authorizing me to read the notice from the *Sentinel* to the congregation, and also to give notice that contributions to the Building Fund will be received Sunday, June 11, the day of the annual Communion service in The Mother Church."

Letters to our Leader.

San Diego, Cal., May 4, 1905.

Beloved Leader:—To-day we are forwarding to Mr. Chase a little Easter love-offering to The Mother Church Building Fund. Though small, we hope that, like the widow's mite, it will find value in the spirit which prompted it. We hope it will give you pleasure to hear something of this branch of the vine. After our contribution to this fund, of three hundred and fifty dollars, some time since, we found that it would be necessary for us to remove from the Jewish Synagogue which we had been kindly permitted to occupy for several years. A suitable hall not being available, the church felt that the time had arrived when we should begin in faith a building upon our church lot. Being but sixty-two in number, with not one wealthy member, error would have discouraged such an undertaking, but trusting the Love which divided the waters before His people, we began. At the present time our church home is outwardly complete, "a thing of beauty," rejoicing our hearts, and we are learning, that as we demonstrate love, our need is met, and we are enabled to take the next step toward the completion of the interior, sure that this will continue until our building is "perfect and entire, wanting nothing,"—a type of the true Church.

We wish to express to you our heartfelt love and loyalty, and our growing appreciation of the glorious truth revealed through you; also a deep sense of gratitude for its demon-

stration in your life of purity, wisdom, and courage. We realize that no greater privilege can be ours than (to quote your own words), "in hope and faith, where heart meets heart, reciprocally blest," to drink with you the living waters of the spirit of "your life-purpose."

Lovingly and gratefully yours,

MARY L. CHEWNING, *Secretary*.

By order of the Board of Directors of First Church of Christ, Scientist, in San Diego, Cal.

Jackson, Mich., May 7, 1905.

Rev. Mary Baker G. Eddy.

Dear Madam:—One year ago last April, I received from your publisher, Mr. Joseph Armstrong of Boston, as per your request, "Miscellaneous Writings," also one copy of the annual Message to The Mother Church on Communion Sunday, June 15, 1902. I wish to say to you that the above books have been a great help and comfort to me. I have often thought about your kind act and wondered what I could do to demonstrate my appreciation and thankfulness to you for them. I value "Miscellaneous Writings" very highly, and, much as I need money, I would not part with this book at any price. I shall always keep this valuable book in remembrance of you. I believe in Christian Science, and should I be fortunate enough to be released from this place it is my desire to go East to New Hampshire, or Massachusetts, and take a course of instruction so as to be better qualified for Christian Science work.

I have arranged to have our prison paper, *The Optimist*, sent to you. Some time if you would write an article for our little paper it would be gladly accepted, I assure you.

Yours very truly,

CHARLES H. MCCARD.

Hudson, Mich., May 8, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Dear Leader in Love:—This, to mortal sense, is my birthday; may I tell you of the true birth which came to me through your teaching? The desire to have a loved one healed brought me to the door of Christian Science. The fear of separation brought me to "the valley of the shadow of death." Bending low under the weight of false concepts,—separation, loneliness, and sorrow,—the seed of Truth, never lost, began to bud and blossom in consciousness, and what you tell us (in Retrospection and Introspection) you learned early in your work, Love made clear to me, and I, too, saw that "whatever is loved materially, as mere corporeal personality, is eventually lost," and from the grave of materiality arose the real and eternal, the spiritual and true. At the foot of the cross I would bury self, and through Christ, and him crucified, I would arise in His likeness, and ever manifest the "loving gratitude, steadfast loyalty, and fruitful endeavor for the Master" referred to in the story of Mary Magdalene.

I gratefully acknowledge and lovingly thank you for what you have brought to this age.

Sincerely yours,

FLORENCE M. MAYNARD.

Cambridge, Mass., May 12, 1905.

My Dear Mrs. Eddy:—Ever since our visit to Concord and your message of love and blessing, I have wanted to thank you. Only as the white Christ ("blessed are the pure in heart") is realized, can we know God's great gift to this age through you, and adequately thank you. May the light which came with your love and blessing radiate and glow until it warm the cold heart of humanity, purify the thought of every hungry seeker after right living, and heal the sin-sick.

With tender love and gratitude, from

GRACE E. COLLINS.

Testimonies of Healing.

When I first heard of Christian Science, soon after my father and uncle had passed away, within a week of each other, I could in no way understand it. Several years after, life was a keen disappointment to me. Orthodoxy had failed to sustain me in sorrow; it did not seem logical. That a God of love could bring such suffering on humanity was inconceivable, and to wait until death for a reward was not a helpful, satisfying thought. Hearing of an aunt's relief from sciatica, through Christian Science, I begged to be permitted to try it. From childhood I had suffered with severe throat trouble, and had tried four of the finest specialists in the West. I had also been examined by one in New York. The last specialist in the West performed four operations of a serious nature. The doctor finally said, "I do not know what more to do for you, in fact all my cases are two thirds mental." He had admitted using hypnotism on other patients and I have every reason to believe he used it in my case, as well as electricity and strychnine, which had such bad effects I refused to take more of them.

The first treatment in Christian Science brought much peace; and after some weeks, the pain with which I had been battling for hours at a time, alone in my room, unknown to my family and friends, as it filled me with shame to be always going to a specialist, was blotted out of thought. Great gratitude is felt for all the physical benefits, and especially for the clearer understanding of the Bible and my consequent spiritual uplifting. That dear book had been the source of so much discussion and perplexity that it had been put aside, as it never was opened with satisfaction or comfort. Now it is a privilege and a joy to study it with our wonderful text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy. Thank God for our noble Leader and all true Christian Scientists who have helped me into the new life, for this Science has taught me patience, healed me of a load of egotism, antagonism, and selfishness. It seemed that family, friends, etc., were lost by coming into Christian Science; my religion was called a fad, and I crazy; but although much persecution has been met during the past ten years, they are worth all the rest of my life put together, for Christian Science has wiped out regrets for the past, fears for the present, and great anxiety for the future. Though only a student of the text-book, I have been able to reflect Truth sufficiently to relieve the sufferings of others; and I thank God for the trials that have shown me the nothingness of matter and the allness of God, Spirit. Three years ago my child was born under Christian Science treatment, and this little one is reflecting Love. My heart goes out in gratitude to the unselfish woman who loved humanity enough to face all seeming obstacles to give out this truth to a needy world. Gratitude can only be proved by living truth so far as we understand it.

ANNEBEL H. G. GUILFORD, New Dorchester, Mass.

A great happiness is surely given us, when we are privileged to testify to the healing power of Christ, Truth. Early last spring, when the days began to lengthen and to suggest the summer outing, I became greatly troubled over my left foot, which had been severely strained and had troubled me for nearly a year. For many weeks it was done up in "liquid glass," then bandaged, then it became necessary to wear a brass plate to support the arch of the foot. All this, however, was of no avail. The pain increased; the ankle was constantly growing weaker, and the thought that I should be obliged to give up my long walking trips was a great distress to me. Just at this trying moment, I received a call from a Christian Scientist. How can I express what that single call has done for me! My healing was wonderful. After the third treatment I left off the bandage and brass plate and walked with

strength and firmness; and during a sojourn of five months in the country—taking many long walks among the hills—my foot never gave me one moment's trouble. No words can express my gratitude and happiness over this freedom from bondage.

It was but natural that I should desire to know more of this wonderful power, and I began at once to study the Bible with Science and Health by Mrs. Eddy. I should make my testimony far too long if I were to write of the rich experience which this reading has brought to me. Many times I have realized my self-ignorance and have been made to see that I must watch and pray without ceasing, but I feel sure that my desire for spiritual growth is sincere, and if that is the case, as Mrs. Eddy says, my heavenly Father will open the way.

MRS. C. B. COMAN, New York, N. Y.

It is a pleasure to acknowledge the great benefits which have come to me through Christian Science. It is nearly ten years since I began the investigation of the subject by borrowing a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy. I had become a hopeless sufferer from asthma,—the disease being so aggravated at times as to make breathing almost impossible. I was also a victim of that dread disease, consumption. It was hereditary, nearly all my family on both sides having passed away with it. I took up Christian Science very much as a drowning man catches at a straw. However, I was much interested as soon as I began to understand it, and having read the book nearly all my waking hours for a few weeks, I became so much better and so convinced of its truth, that myself and wife destroyed all the medicines in the home, and have never since used any remedy except Christian Science. I continued to study and to put into practice the teaching as best I knew, and was restored to health in a few months. I am ever reading with renewed interest, and the little book has been a priceless boon to me. Its message has indeed been the glad tidings of great joy, and its truths were as food to a starving man. I have seemed to awake from a horrible dream, from which one wakes to feel unspeakably glad that it was only a dream. After months, and even years, of preparing for death, I awoke to learn the way to Life.

Prior to my investigation of Christian Science I had been from boyhood an outspoken infidel, had read that class of literature extensively, and had no desire for anything of a religious nature,—the orthodox teaching never having appealed to me as a rational exposition of an all-wise God. I now have no more doubt of the truth of the teaching of the great Wayshower, Jesus of Nazareth, than I doubt the correctness of the basic law of mathematics or music. I have no doubt whatever that Christian Science saved me from the grave, and thus proved a most practicable and efficient help in time of greatest need. However great my physical suffering has been, I can but feel glad that through it the door of consciousness was opened to let in the light of Truth. Thus I have progressed a little way in the knowledge of God, good, as revealed in Christian Science.

CHARLES BONSTEEL, Webb City, Mo.

I cannot longer refrain from expressing my appreciation of the *Sentinel*. It has afforded me much pleasure, comfort, and joy. I also desire to express my gratitude to God, and to the dear God-inspired woman who has led us into the light. How well do I remember the first copy of the *Sentinel* I ever saw. When it was first published, I was situated so that most of my time during the day was taken with my duties as a stenographer, bookkeeper, and with other office work, but when I had a few spare moments they were spent in reading Christian Science literature.

I was not brought into Christian Science through physical healing (although I had seen its physical benefits, and have since experienced them), but for its religious teaching. I had religious proclivities since a child, but not

enough conviction to join the orthodox church under whose teachings I was reared. When I saw and learned something of Christian Science, I did not doubt that it was the religion which Jesus preached and practised.

In my early days, I pondered the, to me, irreconcilable argument of older people, that when people died "It was their time to go—God had called them home;" but of those who recovered from illness it was doctor so-and-so who had restored them to health and saved their lives, and he, instead of God, was given the glory. I could not understand how a physician could possibly restore life, if God had called, and if He had not called, they would have recovered any way. When I learned to read the Bible for myself, I believed that healing should be done through prayer, as Jesus healed.

Oh, what could I do without Christian Science! Nothing could buy the little understanding I have of it, nor "Science and Health with Key to the Scriptures" by Mrs. Eddy, which, studied with the Holy Bible, daily teaches me "precept upon precept." It is with sincere gratitude to God, and to our Leader, that I add my testimony to the thousands of others. My life has been saved from the clutches of disease through Christian Science. Once when suffering from pneumonia, I was restored when it seemed I would pass away that very night. I cannot close without testifying to an experience of a few weeks ago. I had been suffering for several days and nights, but not severely, until one morning about two o'clock, when I was awakened with suffering which seemed very real. I was in a great deal of pain; but got up and treated myself and read from the Bible and Science and Health. I, however, seemed to grow worse, and asked my husband to help me. He did, and read to me from these books, and I kept continually declaring the truth, silently and audibly, while I denied the reality of error. We worked in this way about four hours, when my husband went for one of our church members who lives near, and when she came and joined us, she and my husband read to me interchangeably, and at my request they repeated the Lord's Prayer and the scientific statement of being from our text-book. Truth was proved triumphant in about another hour, and the relief came instantly,—as a clock stops ticking. In one breath I felt in agony, the next I was perfectly easy. I lay quietly for about half an hour, after having tossed for about five. I then felt that I could dress myself. I got out of bed, and when I did so, an ovarian tumor about the size of a hen's egg passed from me. This experience made me feel humbly thankful to God, and to our dear Leader for the revelation of Truth which enabled us to make this demonstration; especially as she says that surgery is the last branch of Christian Science practice to be demonstrated; and further that this disease was destroyed in its inception. My sincere desire is that I may so live the teachings of Christian Science as to be worthy the name, A Christian Scientist. It rejoices me to be able to demonstrate this truth for myself and others, to know that I am doing some of the work Jesus commanded his followers to do.

MRS. TENNYSON S. SPURLOCK, Shellman, Ga.

I cannot remember a time when I was not delicate. As I look back to my childhood I wonder that I lived to womanhood, for I was weak and nervous and always had something the matter. As I grew older, the ills of the flesh seemed to be part of my life. I had rheumatism, a weak throat and lungs, weak heart, indigestion, fainting spells, besides a headache which was almost always with me. While I was delicate, I was not, however, an invalid, for I went about trying to enjoy myself and taking it for granted that these ailments must always be with me, for as my dear mother had always had them I thought I must have them too, so that it never occurred to me to be treated for any of them when I first heard of Christian Science. When I commenced to read Science and Health I knew I

had never read such a book. I felt that the love expressed in that book must come from the heart of divine Love. It seemed to touch every thought in every avenue of life, and I felt such a sense of assurance that all the teaching in that book was the truth.

I was healed of all these troubles which I had cherished so long, by reading our text-book, "Science and Health with Key to the Scriptures," and to-day I do not think there lives a woman in better health than I am. I have learned in Christian Science what Love is, not that which I once thought was love, the love that seemed to make me happy to-day and miserable to-morrow, but I have learned of the immutable, unchanging, divine Love which is as boundless as the universe, and I realize the strength and joy and peace that comes with this understanding of divine Love.

My heart goes out daily in gratitude to God for giving us Christian Science and our dear Leader. I love her with all my heart for the light of Truth reflected by her.

ANNIE E. FITCH, New York, N. Y.

I feel it a duty to contribute my heartfelt thanks for God's gift—Christian Science. My healing came some eight years ago. I was freed from consumption of the blood when I had been pronounced beyond aid, as I seemed to have no pure blood left. My healing from this dreadful disease brought the understanding of the commandment, "Thou shalt have no other gods before me."

The first treatment I received brought a noticeable color to my face,—the first for months. The healing went on some time, when a thought crept in that I was not getting well fast enough. A stimulant was then advised by my parents, but although we thought its use perfectly in order, it was soon discovered to be a hindrance. When it was given up my healing went on beautifully.

Now my daily desire is to be worthy of this healing, both physical and mental, also of the understanding of Truth which I have gained in Christian Science. Our revered Leader shows us the way so clearly.

MISS ELLA E. LINDMEIER, Lyons, Ia.

About seven years ago I was suffering from pulmonary difficulties,—pains in the chest and side,—and could sit up only a portion of the day. It gave me great suffering to walk upstairs. I had no appetite and seemed to be going to the grave, a victim of consumption. I met a Christian Scientist who told me of Science and Health, and said that if I would read it, I would be healed. I told him I would take it, and if I liked it would buy a copy.

I read it almost day and night, as I could not then sleep. I read of a case similar to mine, that was healed in Christian Science, and I opened the Bible where it tells that Jesus rebuked his disciples for their lack of faith. I felt the rebuke and told my husband I had taken God for my physician. I felt that I was healed. I am to-day alive through the teaching of Christian Science, and I feel a deep sense of love and gratitude to God, and to our dear Leader. I know that I can best express this love by striving to live the life of a true Christian Scientist.

MRS. MATTIE KRIMER, Manchester, Okla.

Although I first heard of Christian Science about twelve years ago, I never had the privilege of investigating it until I heard of it through my mother, who lives in Seattle, Washington. A lady came to live near us, and while I was visiting her she began telling me of some of its teachings and the beautiful work it was doing. I got deeply interested, and asked her to heal me of chilblains, which had been paining me severely for three or four winters, so that I could not wear my shoes without suffering. I can remember that the first night I slept much better, and in a short time this ailment entirely disappeared, and I have

had no trouble from it since. I then sent for a copy of Science and Health and a Hymnal. I know this was the best investment I ever made.

I have been a student for about four years and have made many demonstrations for myself, and one especially which I would like to mention. It was over an attack of cholera morbus. Every summer I seemed to have a spell of this trouble and one evening it attacked me very severely, but in a few moments, when I had declared the truth to the best of my understanding, the pain left. In about ten minutes I prepared a meal and enjoyed it with the rest of the family. I have had many demonstrations for myself and others. My husband is with me in this grand work; we go hand in hand in our studies, and the spiritual uplifting is even greater than the physical help.

I am grateful to God, and to our dear Leader who has brought this truth to suffering humanity. We have all Mrs. Eddy's works and also the Christian Science periodicals. I love to read the "Testimonies from the Field" and also the many helpful articles by different writers.

MRS. MARY E. HURLBURT, Mercur, Utah.

Perhaps there are others like myself who have been reading our text-book for several years, and during that period of time may not have realized the many benefits to be derived therefrom, but, like the plant, their whole nature has been undergoing a change. I had been a sufferer for many years from catarrh, which caused me much trouble, and it has entirely disappeared by my continued reading of Science and Health. While reading *The Christian Science Journal* this thought came to me: My transformation from error into truth has been so gradual that I am just beginning to realize the change, and my heart goes out in thankfulness to our beloved Leader, for this gift to the world, "Science and Health with Key to the Scriptures."

MRS. M. B. WELLS, Monrovia, Cal.

I wish to offer my testimony in loving gratitude for what Christian Science has done for me and mine. It is about six years since I first heard of it. Through the study of the text-book, I was healed of chronic invalidism, with a complication of diseases,—two, incurable, so-called. My husband was also healed of many ailments, my sister of serious stomach trouble and headaches, and my mother of a varicose ulcer of many years' standing, after *materia medica* had pronounced it impossible of cure. We all bless God every hour for the truth, and for the dear woman who has shown us the way. It has been my happy privilege to see her and hear her voice several times. I am striving to follow her closely, and to obey the One whom she has taught us to trust wholly.

MRS. LIBBIE EVARTS ALLEN, New Haven, Conn.

For five months I have been trying to give my testimony to what seemed wonderful at the time. One day, when my husband had just driven away from the house to take our two little girls to school, four miles distant, I felt a numbness creeping over me. I was out in the yard, and wanted to get to the house, but feared I should fall, as I seemed to be losing the use of my limbs. Oh, what could I do! If only my husband and children were beside me! I felt that I was dying, and it was such an awful thought to die without seeing them again. My mother-in-law was in sight of the house on horseback, but I could not call her, as my tongue was swollen, and I could only whisper. I seemed to be paralyzed all over.

I began to repeat the text, "Perfect love casteth out fear." My fear was intense, overpowering, when I tried to talk and I found that I could not say a word so it could be understood. I wanted to reach the house and get Science and Health to read, but I was getting so drowsy and numb when I got in, that I could scarcely keep from

lying down. However, I felt that if I did, I would be lying there dead when my husband came back.

I think I never before felt so entirely alone with God. I prayed until I seemed to feel Him near me. I knew He was my *only* help. All at once I remembered the promise, "They shall speak with new tongues." I knew that God is good, that He is all in all, and that my trouble was all in mortal mind. It was not very long before I felt as well as ever, and I realized that this error had returned to its native nothingness.

Every now and then, it comes to me that the withholding of this statement keeps me back in a great many other ways, in not openly giving God the praise that is His due; and I can keep silent no longer. This demonstration made us all happy and thankful, and I feel very grateful to Mrs. Eddy for showing us the way through Science and Health.—ANNIE M. BAYLES, Dyke, Col.

For nearly four years I have known of Christian Science. During that time I have been healed of several diseases. I had rheumatism very badly, and was mentally depressed; so much so, that I very often concluded life was not worth living. My heart is filled with gratitude to our dear Leader, and to the Scientists who have been so kind and patient with me. I am filled with hope and courage, and above all, love for my fellow-man. I hope this little testimony may help some one seeking the truth.

MRS. L. J. CARRANO, Brooklyn, N. Y.

I am very grateful for what Christian Science has done for me. I have been lifted out of despondency, and now each day, instead of having sick and gloomy thoughts, I am filled with a sense of health and love. I have been healed of many physical ailments, and for this I am grateful, but words cannot express the gladness I feel when I remember that I have found God. I hope to show continually that I am learning more of this blessed truth. I thank Mrs. Eddy for her great love for us all.

MRS. ALICE THRALL ROGAN, Chicago, Ill.

I am more than grateful to be counted as one of God's little ones, for of such is the kingdom of heaven. Since coming to Christian Science I have had so many proofs of the power of Love that I might write all day and still have more to say. I feel deeply grateful to our Leader, Mrs. Eddy, for the wonderful book, Science and Health, that she has given us. Each day its pages reveal to me new beauties, it is indeed a "Key to the Scriptures."

ELEANOR S. SMITH, Chicago, Ill.

[Written for the *Sentinel*.]

The Call.

M. E. T.

ARISE, strike off thy fetters!
Be error's thrall no more.
Stretch forth thy hand, my brother,
Christ healeth as of yore!

Stretch forth thy hand, my sister,
And touch his garment's hem.
Lift up thine eyes, behold it,—
The kingly diadem!

Life, Truth, and Love the circlet
Around that brow of light;
Press forward, steadfast follow
Thy Captain in the fight

'Gainst all the hosts of error,
Their nothingness to prove,
Till all the world shall find Him,
And know that God is Love!

From our Exchanges.

All these modern substitutes for the church exploited by men and women, separately or unitedly, seek congeniality and efficiency by selection. "Nice" people hope to enrich their lives in one another's presence freed from the distractions of the other kind. All these exclusive compacts fail of the fundamental democracy that belongs to religion and after all is better embodied in the church than anywhere else. Certain "nice" people have elected you into their membership. This nicety you will help guard with your black balls only to find that eventually it grows tiresome and stupid to you. There comes inevitably the time of disillusion to the devotees of fraternities, sororities, clubs, and societies, when they discover that they hold no monopoly on excellence; that many interesting people are outside their boundaries, and that their own hearts overreach the limitations they have so championed. There is a growing life in all these that yearns for an organization big enough to hold men and women, genial enough to include rich and poor, wise enough to reach the old and the young, and loving enough to like those who are unlike themselves; and this is what the church assumes to be, nay, comes nearer being than anything else known to man.

JENKIN LLOYD JONES.
The Outlook.

The Christian life is a life of endeavor. It can never truly be anything else. There may be and there must be accomplishment along the way, but there can never be anything like full and final achievement either in service or in character. For satisfaction, what the Christian needs is not work which can be ended, not spiritual attainments beyond which there is nothing more to be striven for or expected; but the Christian does need for the satisfaction and rest of his soul a feeling of certainty that he is in the right way, that he is engaged in the right work, and that he is steadily approximating to his ideal, Jesus Christ. This is what we long for. This satisfaction cannot be found in any contemplation of his own character and achievements, nor in reliance upon his own knowledge and judgment, but in an ever conscious sense of the unfailing and perfect leadership of the Holy Spirit, which Jesus said, "Will guide you into all truth."—*The Watchman.*

Very few are acquainted with the wealth of spiritual suggestion which lies in the application of the terms temple, tabernacle, sanctuary, house of God (wherever found throughout the Bible), to us personally and individually, as well as to the whole company of the disciples, the Church or congregation of the saints. Many passages in the Psalms, for example, where the original reference, of course, is to the temple at Jerusalem, acquire a deeper, more practical, more beautiful significance by being given this turn. Most fittingly now may we make it our "one thing" desirable, that we should dwell in this house of the Lord all the days of our life, by esteeming ourselves God's house and living in full accord with that idea, for thus shall we indeed "behold the beauty of the Lord," and be able to "enquire in his temple," finding him speak within us and tell us what to do.

Western Christian Advocate.

Nothing is easier than to inveigh against those who differ from us, to call them by harsh names, to deny to them citizenship in the kingdom of God. Would it not be better to determine, so far as may be possible, the personal attitude towards Jesus Christ of those whose orthodoxy we question? If any man commits himself in whole-hearted devotion to God's Son, if he loves him, enthrones him in his heart and life, honors and serves him, is not that man our brother Christian?—*The Standard.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

Robert Watchorn, the recently appointed Commissioner of Immigration at Ellis Island, New York Harbor, came to this country in 1879 as an immigrant himself. For many years Mr. Watchorn has been interested in the immigration problem. After spending four years as State Factory Inspector of Pennsylvania, he was appointed an inspector of immigration at Ellis Island in 1895. As such he made himself prominent by his activity and intelligence, being sent to Mexico and Europe to observe the situation and making valuable reports on the evasion of the immigration laws. Learning that thousands of immigrants were making their way into this country illegally from Canada, he was sent there, and developed a system that broke up the process.

On the ground that their business is fraudulent, pseudo-medical concerns in a number of cities, advertising extensively to effect remarkable cures, have been barred from the mails by fraud orders issued by Postmaster-General Cortelyou. By the terms of the fraud order the concerns against whom it is issued can receive none of the mail addressed to them, and cannot even receive money orders made payable to them. Their letters are returned to the senders marked "fraudulent" wherever the sender's address appears upon the envelope, and in all other cases they are sent to the Dead Letter Office.

President Roosevelt, in his speech before the Iroquois Club (Democratic) of Chicago, said.—

"The longer I am in political life the more firmly am I convinced that the great bulk of the questions of most importance before us are questions which we can best decide not from the standpoint of Republicanism or Democracy, but from the standpoint of the average American citizen, whether Democrat or Republican."

The eleven yachts competing for the Emperor's Cup in the ocean race from Sandy Hook to the Lizard, finished in the following order: Atlantic (American, 12d. 4h. 1m.), Hamburg (German, 13d. 2h. 4m.), Valhall (British), Endymion, which previously held

the record, Hildegard, Sunbeam, Fleur de Lys, Ailsa, Utowana, Thistle, Apache.

The steamship *Terra Nova*, formerly a whaler, which has been fitting out in Scotland for several months, sailed on May 16 for Tromsø, Norway. Thence she will sail for the far North, to search for the Ziegler Arctic expedition, led by Antony Fiala, which is believed to be hopelessly entangled in the ice.

The Lewis and Clarke Exposition was formally opened June 1 at Portland, Ore.

Foreign.

The first working session of the International Congress called to discuss the proposal of King Victor Emmanuel to establish an International Chamber of Agriculture, took place last week at the Corsini Palace, in the presence of the diplomatic corps and one hundred and fifty delegates. The conference appointed three commissions—the first to study the organization of an international institute; the second to study the object the institute has in view, and the third to consider the means by which the institute shall be supported.

A great irrigation project, involving an expenditure of about \$25,000,000, has been authorized by the Secretary of State for India. The area commanded by the canals is about 6,250 square miles, although only a small part of it will be reached for a number of years to come. In this area it is estimated that about 3,000 square miles will be irrigated.

The announcement is made that the Japanese losses in the great naval battle in Korea Straits were 113 officers and men killed and 424 wounded. The Russians lost, according to the latest figures, 7,000 men killed and 3,000 prisoners.

The Government in India has offered a prize of \$165 to all officers who will learn and pass an examination in the Tibetan language.

Since the beginning of the war the total shrinkage in the value of Russian public securities is nearly \$875,000,000.

King Alfonso of Spain visited France last week as the guest of the nation.

Industrial and Commercial.

The *Journal of Commerce and Commercial Bulletin* says: The developments of the steel industry during the month of May have been of unusual interest and importance. There has been a large volume of business in heavy steel products and a marked falling off in new contracts for the lighter finished materials. The dissolution of the steel rail pool seems to have been very favorable to the rail mills. There has been a more active demand.

The last report of the Government shows that there are seventy-five billion feet of redwood timber standing on the Pacific coast. Redwood makes an excellent wood for house building, takes a high polish, is practically indestructible by the ravages of time and weather, is not easily set on fire, and as it contains little resin, is almost invulnerable to forest fires.

General.

Lake Michigan rose two feet in the Chicago harbor on Monday, April 10, and receded ten feet on the sands near Waukegan. The fluctuation was due, it is explained, to dynamic pressure. There was a fall in the barometer, the air pressure in the immediate vicinity of Chicago moved north, and the water rose two feet. There are well-defined currents and undercurrents in the lake given to eccentricity of action, and other currents, not well defined, which contribute to that unrest of Lake Michigan which puzzles the best of us.

When the cribs were being constructed in 1883, unexplained currents, moving first one way and then the other, greatly retarded the

work. The superintendent of the work took careful observations to determine the period of recurrence in these currents, but they came and went without rule, the gauge showing a rise or fall of from two to three feet within an hour. Possible variations in pressure did not account for the surprising capers of the lake that year.

On the 23d of July, 1884, fluctuations of a similar character occurred, making a change in lake level of four feet. There was very little change in the barometer from 7 A.M. to 10 P.M., and the theory of dynamic pressure did not fit the case. On the 16th of August, 1886, the fluctuations ranged from eighteen inches to three feet and continued during the day.

Sir Frank Younghusband, the leader of the recent British expedition to Lhasa, the sacred city of Tibet, brushes away in an address the delusion that Tibet is a rainless country. After marching over the elevated plateau, says the *Youth's Companion*, the expedition reached the valley of Gyantse, where willows and poplars were bursting into foliage before the middle of April, and the river banks were covered with masses of purple iris.

On resuming the march for Lhasa, July 14th, heavy rain fell, and frequent rains were experienced until September, and the size of the rivers showed that this part of Tibet has a good rainfall. Lhasa was found lying in a "lovely valley covered with trees, rich with cultivation, and watered by a river as broad as the Thames at Westminster," and "hidden away by ranges of snowy mountains."

Beautiful books were discovered in the temples of Tibet by members of the Younghusband expedition. These books have covers made of close-grained wood, divided into three panels, each one carved with minutely exquisite workmanship. In the center are one or two Buddhas seated on a lotus throne surrounded by the foliage of the "Bo" tree. The whole cover is heavily gilt, the first page of the manuscript being covered with a silk veil of green or red. This page is of a deep Prussian blue, with an ingot panel in the middle bearing the opening words of the book in raised gold letters. The book is printed in large regular letters of gold or with alternate lines of gold and silver.

According to census reports of the increase of population that took place between 1880 and 1890, considerably over sixty per cent went into our larger cities; between 1890 and 1900 the proportion that was added to urban life was reduced to a little over thirty per cent, and apparently since 1900 has been steadily reducing. The taste for country life is rising almost to enthusiasm. The people are going back to their earlier conditions of homeliness with nature, says an exchange.

The Sultan of Morocco, it is reported, will reply to the French proposals, admitting that reforms are necessary, but regretting his inability to conform to French wishes, unless all signatories to the treaty of Madrid agree as to the means for carrying them out.

The British and Foreign Bible Society's List of Versions now include Scriptures in 378 distinct forms of speech. In ninety of these it is providing at least one version of the whole Bible, and in seventy-six others a complete New Testament.

The eruption of Mt. Vesuvius continues, the volcano showing four new openings through which the lava flows, while the immediate surrounding country is covered with ashes.

The Duke of Abruzzi, who has been preparing a great expedition to explore Central Africa, expects to be ready to start in the autumn.

The income of Oxford University is slightly under \$350,000 a year.

Berlin and Dresden are now connected by a wireless telegraph service.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Science and Health as Literature.

W. D. MC CRACKAN.

THE force and beauty of the literary diction and structure in the Christian Science text-book, "Science and Health with Key to the Scriptures," by Mary Baker G. Eddy, can be rightly appreciated only as the spiritual import of the book is gained. Indeed, the reader who opens the book with the intention of criticising it solely as a literary production, begins at the wrong end and places himself in a false position. He may presently find that he is unable to estimate the literary beauties of the work, because his uncorrected materialistic tendency of thought twists and warps the spiritual meaning of the passages he is reading out of all semblance to that which the author actually intends to convey. It is a common experience among earnest students of Science and Health that passages which at first seemed to be obscure in phraseology grow clear and luminous as they themselves learn to take the steps from sense to Soul and are taught more of truth by actual experience along the battle-line of warfare against evil. The phraseology has not been changed, but the ability of the reader to understand has grown by demonstration. If, therefore, earnest students, who are already proving in a measure the truth of Mrs. Eddy's statements, encounter difficulties in the text of Science and Health, it is reasonable to expect that indifferent or possibly hostile critics may have the same experience. In expressing her ideas the author of Science and Health has naturally followed a certain literary order or arrangement, but if her ideas are not in the least understood this very order and arrangement may seem to the reader more like disorder and disarrangement, and the conclusions reached may appear to lack logic and true reason,—hence much mistaken criticism.

As a matter of practical experience it will be found that the great majority of the readers of Science and Health are searching for its spiritual import and are not greatly concerned at first in discovering beauties of literary style. They are hoping to receive some moral, mental, or physical benefit, or to learn the way by which Christianity may be made practical in the hour of temptation, sorrow, sickness, and trouble of all sorts. Almost all these readers are primarily seekers for good, and as such they receive the Scriptural promise and benediction that they "shall find." Nevertheless there may be sincere readers of the Christian Science text-book who are tempted at moments to cry out that its diction is not clear, and its structure wanting in coherence. It will be of service to them to be reminded that such criticism proceeds from the fact that their own preconceived notions are being upset, and the new leaven of right ideas is at work in their consciousness. The time comes for all true students when the Christian Science text-book not only unfolds its majestic statements to human apprehension with the precision and definiteness of actual science, but also with the beauty of holiness reflected in diction and structure.

There is pronounced originality in the literary style of Science and Health, an originality corresponding to that

of the spiritual message which Mrs. Eddy brings to a materialistic age. Apart from the author's special capitalization of words not used by other authors as synonyms of God, it will be observed that many words are used in what may be termed their primitive or original meanings, and that derived or secondary meanings are very generally eschewed. If the reader's attention is arrested by the author's particular use of a word, he will do well to turn to the best dictionary authorities, where he will doubtless find this use confirmed and supported by writers of classic English. There is also a very marked avoidance of unnecessary words, and this literary habit lends insight and distinctness to her statements and lessens the risk of misunderstanding them. It also gives permanence and durability to her words and makes them more readily available to people of different grades of education. It has frequently been observed by the Scientists whose work lies chiefly among those who do not speak English, that their patients can learn to read the Christian Science text-book more quickly than they can any other book in English. This is doubtless due in great part to the eager desire of these readers to reach the message of good news and of healing which the book brings, but it has also been surmised, and not without reason, that the very choice of words and a certain directness in their use are helpful to readers not familiar with English.

There is throughout Science and Health a very marked positiveness of statement, as one would expect in a book dealing with Science; but this characteristic is apt to excite astonishment, and sometimes even to invite censure, because the public is not accustomed to find uncompromising positiveness in works on religion or ethics, and does not look for definite and precise rules in questions which relate to spiritual thinking. It is not until the reader begins to understand that Science and Health, far from being a work of tentative opinion, of speculative philosophy, or even of hopeful philanthropy, in reality sets forth a Science which has been proven conclusively and definitely by the author herself, that he appreciates the valid reasons for this positiveness of statement. We thus find that this book differs radically from other books on morals, in that it does not merely theorize or give good advice of a general nature, but is specific and accurate in prescribing the unfailing rule and the correct practice for the regeneration of the whole man, morally, mentally, and physically. The tendency to find fault with the absolute nature of these statements is born of the general belief lurking in human consciousness, that a statement of spiritual things must of necessity be vague, uncertain, and mysterious, and that physical matters alone are entitled to precise definition. Thus the very style of Science and Health rebukes the false human sense which would try to monopolize the word Science on behalf of matter and its perishable phenomena, and to relegate Spirit to the realm of the unknowable.

Very prominent among the literary characteristics of the Christian Science text-book is a certain reiteration of ideas which does not involve repetition. An impatient reader, unmindful of its spiritual message, may imagine that the argument is long-drawn, and may exclaim that

the whole voluminous writing might have been compressed within half a dozen pages. No literary critic, however, who desires to render a just verdict, irrespective of prejudice or previous habit of thought, can fail to note that the reiteration complained of is really one of the signs of all literary productions which are called great. From the time of Homer's "Iliad" this reiteration of ideas, from different points of view, in varying modes and tones, has marked every great classic in literature. It is a method which has doubtless been used instinctively by writers of all times in an attempt thoroughly to satisfy the minds of their readers. The same tendency shows itself in music, especially in the opera-dramas of Richard Wagner, who reiterates his musical phrases, his themes as they are called technically, in every key and order to satisfy the demands of the listener. Viewed merely from the standpoint of literature, Science and Health thus displays one of the prime requisites of artistic greatness in this very reiteration of its central theme, that infinite Mind and its infinite manifestation constitute the all of being. A statement of so radical a nature evokes a multitude of queries, and thus leads to accompanying and related themes, all of which are required to meet the insistent needs and the greatly diversified demands of human thought. The resulting whole thus springs from one root with expanding consistency, and effects the correction of the false concepts about God, man, and the universe, latent in human consciousness, while at the same time substituting for them the true ideas which are established in metaphysics as the eternal facts of existence.

It should be borne in mind that every literary work of value has a distinct ethical purpose, and its greatness is best measured by the fulfilment of this purpose. The best proof of the correctness of any literary method is to be found in the depth and character of the impression made upon general thought. The substitution of true ideas for false beliefs results, in this case, in a fact with which the world at large is gradually becoming familiar; namely, that multitudes have been and are being healed of all manner of diseases by reading Science and Health. The healing power, then, is the culminating characteristic of the Christian Science text-book, its distinguishing feature, the mark by which it takes rank as the true "Key to the Scriptures." The writer of this article knows of no other book in the whole realm of literature, outside of the Bible itself, for which this healing power could be claimed; and no book could claim to possess this supreme characteristic if it were not based upon the Bible, and in accord with the Mind that was also in Christ Jesus. A closer study of Christian Science, and especially a more earnest application of its teachings, in practical proof and definite result, will reveal the reasons for that which may seem strange and novel in the grouping of Mrs. Eddy's ideas or in their sequence. The healing task which Science and Health performs requires more than a mere narrative style. In setting forth imperishable statements of Truth and uncovering as well as destroying erroneous beliefs, a new literary order and method of procedure has been found necessary to meet the need; and wise literary critics will do well to withhold any objections which conventional thought may suggest until they are competent to estimate the value of Mrs. Eddy's style by reason of a clearer knowledge of her real motives and achievements.

When this knowledge is gained, even in a measure, the astonishment of the reader grows apace as the vista opens wider and farther into grand possibilities. The wonder is that this book could ever have been written, that any one was found loving enough and brave enough to issue it, or having placed it before the public was enabled to keep it there, unperverted and untarnished by the misunderstandings which its spiritual quality provoked from an unaccustomed world, and profound gratitude to the author of Science and Health rises spontaneously at the thought of the marvelous good which the text-book has accomplished and is accomplishing in behalf of suffering mankind.

"My yoke is easy."

MAY LOUISE JACOBS.

Take my yoke upon you, and learn of me: for I am meek and lowly in heart: and ye shall find rest unto your souls.—CHRIST JESUS.

"Ye shall find rest unto your souls,"—the reward is abundant, and day by day, as our spiritual understanding grows clearer through the revelations of Christian Science, does this promise convey a richer meaning and come nearer fulfilment in our experience. In a measure, as we learn of Christ and partake of his meekness and lowliness of heart, we are coming to understand the promise; in a measure, too, we are learning the nature of the burden to be borne. But do we realize the two-fold significance of taking Christ's yoke upon us; what this act implies on our part, what it meant to the Master?

Through centuries of association, the yoke has come to be a sign of servitude and bondage: the oxen at the plow are yoked together; the Israelites in their captivity were under the yoke of their oppressors. Hence, by voluntarily taking Christ's yoke upon us, we signify our intention to labor in the kingdom of God, not, however, as captives, unwillingly, but of our own free choice. From the Scriptures we learn that God "desires mercy, and not sacrifice," and the Master said, "Henceforth I call you not servants; . . . but I have called you friends." The Master who said, "I am the way, the truth, and the life," would not demand submission merely for the sake of submission, nor a sign of servitude as an end in itself. Though the yoke has, in the history of material man and beast, become the symbol of servility, its true object is not to show subjection, but rather that the oxen may the better do the work of their master; may bear their burdens more easily than would be possible without it. So also in its spiritual sense, the yoke is not a burden, but a means of lightening our burdens, and enabling us to perform our duty as children of Him whom we acknowledge as our Father, the creator and Life of all. When we take upon us the yoke of Christ,—that is, when we give our obedience to Truth with the right conception of Life, the right understanding and estimate of all things,—we find our strength increasing through the very act of submitting to this yoke which our wearied senses, in their ignorance, had looked upon as an added burden. Our Master, Christ, relieves us of the heavy weight of the yoke of selfishness and erring judgment; relieves us, in proportion to our willingness and faithfulness, of our burden of sins and diseases, anxieties and perplexities of mortal existence. Instead of these, Truth offers us a share in the labor that is light with hope and satisfying in the certainty and fulness of its fruits,—even the labor of spreading the gospel of Life and Truth and Love; and to help us in this work, we are provided with the easy yoke of obedience to the all-wise and unerring Principle, Love.

The Answer to Prayer.

KITTIE B. WALSH.

THE answer to prayer has been a question of vast importance to Christian people in all ages. Jesus said, "Ask, and it shall be given you," and James, "Ye ask, and receive not, because ye ask amiss." Many testimonies are constantly being given by people who for years prayed to be delivered from the bondage of sickness and sin, and for whom many prayers were offered without apparent results, yet, on coming to Christian Science, a speedy release was found. Does it not follow that they must have ceased, in some degree, to ask amiss, and in that same degree begun to ask aright, since "by their fruits ye shall know them"? The statement in 1 John, 3 : 1-3, which is read at all Christian Science Sunday services, presents a condition attainable by us, when "we shall be like him." What does it mean to be like him? From our present standpoint does it not

mean that we shall possess everything for which we can possibly pray? No one conceives of God as experiencing fear, doubt, discouragement, sickness, sorrow, or sin; or as lacking any good thing. God is Life, Truth, Love, infinite good, and surely, when we find ourselves like Him, in His likeness, the necessity for prayer, as commonly understood, will be done away, for we shall realize the possession of all good things. Is it not equally true that in the degree of our finding ourselves like Him, we shall gain the supply for our present need and the relief from our present bondage,—the answer to our prayer?

Again, a condition is named whereby we may attain to this desired estate. It is, that we see Him as He is. What does it mean to see God as He is, as infinite good, omnipotent and omnipresent? Does it not mean that we must cease to see evil? To know one Mind we must cease to believe in many minds. To see Spirit we can no longer look into matter to find substance and intelligence. To see infinite Love it is necessary to banish malice and hate; thereby fulfilling Paul's injunction to "put off the old man" as a necessary condition to putting on the new.

It follows that when a Christian Science practitioner is called to aid the sick or the sinner, he will gain the answer to his prayer, that is, find the likeness of God for his patient and himself, in just the proportion that he has ceased to see evil and has come to see good. Christian Science reveals the fact that the separation between good and evil can be attained only in daily living. If we are to see good it is necessary to do good and to be good. Jesus' life presents a long series of deeds of unselfishness, loving-kindness, charity, self-sacrifice, and mighty works of healing. Truly he was "A workman that needeth not to be ashamed, rightly dividing the word of truth." It has often been said that Christian Science is a religion of doing rather than talking, hence the vast importance of the closing words in 1 John, 3 : 3. "And every man that hath this hope in him purifieth himself, even as he is pure."

The unceasing toil and loving self-sacrifice, the pure motive and noble purpose of our beloved Leader, have made it possible for this age to gain, in Christian Science, a better understanding of God: to receive in large measure the blessing of answered prayer and to hear the call of eternal Truth,—“Ho, every one that thirsteth, come ye to the waters.”

Peacemakers.

JESSE B. TWISS.

“BLESSED are the peacemakers: for they shall be called the children of God.”

Who are the peacemakers? They who make peace. And what is peace? Peace is more than absence of quarrels among human beings. Peace is harmony; a sense of happiness; a measure of love. It is the content of health and prosperity undisturbed by sickness, poverty, pain, disaster, sorrow, or fear. It is restful occupation; decisive, persistent progress; calm, contented assurance of an abundance, dominion, resource; it is indeed all that makes and keeps man actively, steadfastly, truly happy. Well may they who make such peace for themselves and others be called the children of God!

Blessed, indeed, is it, when even one individual is brought from helpless weakness, racking pains, or torturing fears into such a glorified sense of “on earth peace,” as true peace always is to human experience. And who would not be such a peacemaker? and where can such peace be found?

One such peacemaker there was who, after uttering the words quoted above, went forth giving daily proof that God had indeed placed it in the power of His child to bring this health-giving, life-giving peace into the experience of all who obeyed the rules thereof. His own followers learned how to manifest and impart this peace, and they became truly peacemakers in this larger meaning of the word.

Even the persecutions which they all endured only brought them the greater assurance of the supremacy of their peace; nay, even the very cross whereon his persecutors thought they had ended all earthly peace for Jesus, became the proof he needed to convince an ungrateful, doubting world that neither their sense of an ignominious death nor a rock-hewn grave could overpower, hide, or mar the perfection of his peace on earth.

Thus the Master peacemaker proved the majesty and might of his peace to meet and overcome the seeming reality of human hatred and material disaster. Men did not, however, grasp at once the meaning of this marvelous demonstration, and wars, tribulations, and sins in multiplying forms seemed to hide for a time the grandest lessons of his life-work.

Then came “a still small voice,” whispering with new meaning, “Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you.” Not in drugs and opiates, but “in spirit and in truth” give I peace. A woman heard this voice, and so attuned to spiritual sense was she, so apart from the world's clamoring discords, that she understood the Word and sent out anew to a doubting, suffering, and weary world the glad assurance of a divine and heavenly peace, attainable here and now by all who will heed the call and learn the way of its re-appearing.

To-day Christian Scientists in every land are joyfully unfolding the peace of God to man, wiping the tear-dimmed eyes of mortals that they may see and understand the harmony of divine Love, the sweet healthfulness of the water of Life. From lips unnumbered there goes up a great song of gratitude to him who first taught men the way of the peacemakers, to her who heard the “still, small voice,” and to all the great and growing army of peacemakers in Christian Science, for the fulness of the peace which divine Love, reflected in their consciousness, is pouring out unstintedly upon the children of men.

Thus again, to all who listen, comes the glad angelic song, “Glory to God in the highest, and on earth peace, good will toward men,” and again wise men turn with eager step to follow the light of Truth leading to the place where the idea of divine Love is found.

[Written for the *Sentinel*.]

Song at Sunrise.

MARY J. ELMENDORF.

THE bonny sun is in the east,
And hills and fields are fanes of green
O'erlaid with gold, like solemn chords
With lilting melodies between.

My thirsting heart, elated, waits
'Mid singing birds and shining leaves,
And from the crystal fount on high
A deep, sweet draught of love receives.

Sorrow and pain and sodden care
Fall from me like a garment; free,
With falcon strength, thought takes the blue
On homing wings of ecstasy.

Peace, dew-bright, glistens everywhere;
Light veils the gloom: the rose the clod;
I see the good through all things shine,
And feel the healing touch of God.

The bonny sun is in the east,
And hills and fields are etched with gold;
The sunny truth is in my heart
With benedictions manifold.

Selected Articles.

The improved knowledge of God, whom Jesus declared to be Spirit, is clearly the manifestation of divine Mind or infinite intelligence. This knowing includes the better understanding of the nature and qualities of the creations of this infinite Spirit or Mind, and of man as primarily and eternally a spiritual being in the image and likeness of Spirit, not matter. Christian Scientists plant themselves unreservedly on the teachings and practice of Jesus and Paul, which teachings and practice they are striving day by day to better comprehend and express.

"It is the spirit that quickeneth; the flesh [matter or non-intelligence] profiteth nothing." "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." Again, "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." Is it not now as then? Are not spiritual laws and means to-day regarded as foolishness, and is not the natural man to-day claiming to know the laws and ways of the one infinite Spirit, and to know and discern them materially and as wholly material? Is not this claim an emphatic contradiction of Paul's statement, that spiritual laws and means must be spiritually (mentally) not materially discerned? Is it not a fair deduction that if the spiritual law of life must be spiritually discerned, it must be spiritually, not materially, utilized and applied?

Jesus used this law of Life or God spiritually for the healing of sin and disease. Knowing the spiritual law better than did others, he employed it more effectually. This spiritual law he amply proved did not exalt destructive, material law, but overcame it. This law of God he proved always operated to heal and save, and never to destroy or injure. It had no element of dualism in it. The wave and tempest yielded to the supremacy of this spiritual law. In the degree it is understood, it preserves and protects man from the evil of contagion, the evil of disease, and the evil of every destructive material element, warring against the divine law of Life.

The prayer of spiritual understanding communes with God and reflects the divine nature, which heals the sick and sinful as nothing else can or ever will. This spiritual healing in Christian Science reaches out to the weary sick, who have lost faith in matter as a healing agency, and who at last turn to God and find the truth that makes free. Jesus healed and could only heal those who were in some measure ready to turn from material to spiritual means—from matter to God or Spirit. So only to the sinner who has in some measure found that there is no permanent peace, pleasure, or profit in evil thinking or doing, can the gospel of Christ give out its saving and redeeming power.

JOHN CARVETH.
Flint (Mich.) News.

Christian Science claims that God is everything that the inspired statements of the Bible and the teachings and life of Jesus reveal Him to be; that He is omnipotent, omnipresent, and omniscient Spirit; that He is Love; that He is Life; that He is the source of every good and perfect blessing; that He is "good and very good;" that He is "All in all."

Christian Science teaches that Christ is "God with us," the manifestation of God on the plane of humanity. It teaches that Christ is divine, the Son of God, the Healer of all diseases and the Saviour from all sins. It teaches that it was through the humanity of Jesus that the divinity of the Christ was made manifest; and Christian Scientists believe that it was necessary for Jesus to sacrifice his life in the flesh in order to prove his divine life in God, and thereby reveal and make possible the perfect atonement with the

Father. It makes the atonement of Christ the reconciliation of man to God and the full salvation from every evil to which flesh is heir. While it gives a fuller, deeper, more spiritual meaning to "the blood of Christ" and to "the cross of Christ" than do some of the more popular forms of historical Christianity, it attaches the very deepest and the sublimest significance and importance to everything in the life and experience of Jesus, from his conception to his ascension.

While Christian Science teaches that sin and other evils are neither in, nor of God or His spiritual creation, it also teaches, with the greatest possible emphasis, that all sin must be repented of, forsaken and overcome, before we can be free from the claims of evil. When Christian Science says that sin is unreal, it means that it is an awful lie and deception; that there is no real pleasure or satisfaction in it; that it always ends in pain and death; that, unlike God and His manifestations, it can be overcome, destroyed, and annihilated, and thus proven unreal. Christian Science also recognizes that there is no way to get rid of sin and the evils of existence except through Christ and the Christ-way. In fact, all our denials of sin and evil are to the end that we may love and do that which is good, that which is right, that which is worth while, that which is spiritual, that which is Christly.

In a word, Christian Science, in common with primitive Christianity, teaches that God is, in fact, "All in all," but that His allness will come to light as fast and only as fast as Christ, divine Truth, is seen, lived, and made all in all; as the world, the flesh, and the devil, and all evil are overcome in and through Christ and Christianity.

PROF. J. R. MOSLEY.
Macon (Ga.) News.

A careful examination of Scriptural teaching will be convincing that in their theory Christian Scientists are no farther in advance of their practices than are other Christians who believe the Bible, and who endorse such declarations as the following: "Be ye therefore perfect, even as your Father which is in heaven is perfect." "And thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength."

Christians who fulfil the demands of these admonitions of our Lord will not fall short of the demands of Christian Science. Jesus said, "The works that I do shall he do also." He made no exception whatever; he did not say,—He that believeth in me shall be able to do in a degree the works that I do, but "The works that I do shall he do also."

A believer, therefore, according to our Master's standard, should be able to heal the sick, cast out evils, raise the dead, and overcome all human woes, all calamities, and even counteract the evil effects of the elements.

Christian Science points to a time when Christians will be able to comply in full with the Divine requirements, but it recognizes that a beginner in the Christian life can no more be expected to perform all the works of our Lord than the child can be expected to do the work of a man. We must place our standard and then work to it.

Because a Christian Scientist sometimes fails he should not be charged with inconsistency, since his lack of success, like that of every Christian, should be credited to the fact of his being an infant in his faith when he ought to be a man. If mortals are faithful in their efforts to practise what they know, each successive generation will improve in understanding and practice, until perfection will be eventually manifested in their practices.

ALFRED FARLOW.
Boston Times.

There is no duty we so much underrate as the duty of being happy. The man who forgets to be thankful has fallen asleep in life.—ROBERT LOUIS STEVENSON.

The Lectures.

Sioux City, Ia.

Before a large audience at the New Grand Theatre last night [April 11], Bicknell Young of Chicago delivered an interesting lecture on Christian Science. Mr. Young was introduced by Congressman Elbert H. Hubbard, who said,—

Some one upon the street to-day asked me whether I was a Christian Scientist. I said, "No." He said, "How comes it that you are introducing the speaker to-night?" I said, "First, as an act of courtesy to a stranger within our gates, and then because he comes as the representative of a great and growing body of earnest and sincere believers, asking only for, and entitled to, a fair hearing." The last words of Goethe were, "Mehr Licht," and as we find ourselves surrounded and enveloped by this mystery of life and death, forever flowing and inflowing, beyond which we can scarcely see, when one comes to us offering light, it is well for us to give attentive ear. From the beginning the race has sought more light, more light. To-night I bespeak for him who shall speak to you an open heart and a candid mind, seeking for the very truth.

The Sioux City Journal.

Riverside, Cal.

Yesterday afternoon [April 23], a large audience greeted Edward A. Kimball, who lectured here on Christian Science under the auspices of Second Church of Christ, Scientist. Prof. A. N. Wheelock presented the speaker to his audience, saying in part,—

In the course of our development we have become a nation of seekers after fact, and though the materialistic side seems at times overdeveloped, we as a people are willing, yes, eager, to know the truth, not only about the forces of the natural world, but also about the forces of Mind and Spirit. We have come to see that the widest and fullest liberty in investigation and discussion is of the utmost value in getting at truth; that intolerance, once thought to be a necessary guardian of truth, is its worst enemy. We have come to know that truth is many-sided and that the receptive mind can get from every honest truth-seeker something that will make its own perception clearer and brighter.

With this broader and more tolerant attitude and with the inquiring mind, partly as cause and partly as effect, has come the scientific spirit, the spirit that questions and probes and tests as never before in human history. A proposition regarding natural forces, a political dogma, or the tenets of a religious faith can no longer rest securely on a mere dictum. They must show to a questioning and sceptical world a reasonable why and how. Reason may transcend faith but the world to-day demands a reasonable faith.

This scientific spirit is another great aid in gaining truth. Sometimes it requires the restatement of old truths and sometimes it demands that ideas that have been held shall be discarded, and for this reason it is feared as the destroyer of truth. But it cannot destroy; it tries, tries as gold is tried.

I hardly know why I am asked to fill this position; I feel somewhat out of place, for I suppose that I am as far from an acceptance of the tenets of Christian Science as any one in this audience; but I try to keep in large measure that receptive mind which would get help to clearer understanding and surer knowledge from every source. And after all, we all of us—humanity itself—are striving for the same goal. We would know the truth; we would have doubt dispelled and rest in the quietude of certainty.

Riverside Enterprise.

Stamford, Conn.

The teaching and the meaning of Christian Science were explained last evening [May 9] in a lecture in the Burlington Music Hall. The lecturer was W. D. McCrackan of New York. Mayor Cummings introduced the speaker, and said in part,—

Whether a person is a believer in Christian Science or not, he cannot fail to be impressed by the rapid growth in the number of its followers, and by the hold which it has taken upon so large a proportion of the intelligence and culture of America. These facts, in themselves, are sufficient warrant for following with attention whatever may be said upon the subject by one who speaks with authority.

I understand that it is the custom, upon occasions like this, to invite some person, not a member of the local organization of Christian Scientists, to preside at the meeting and to introduce the speaker. This custom might not inappropriately be called both delightful and tantalizing. It has its charm in the fact that it recognizes, in this way, the universal brotherhood of man, without regard to differences of opinion concerning doctrines, creeds, or faith. Its difficulties, however, consist in the fact that, under most circumstances, it would be likely to place the presiding officer in an embarrassing situation. For instance, how is it possible for a person who may not be a believer in Christian Science to preside at a Christian Science meeting, and introduce a Christian Science orator to a Christian Science audience, in such a manner as, simultaneously, to glorify the speaker, to gratify the audience, and to satisfy his own conscience? Yet I confess to no such feeling of embarrassment. I am always glad to meet with earnest men and women who are endeavoring to do their work well in this world, and are faithful to the light as they see it. I am always glad to listen to the words of an intelligent man who sincerely feels that he has a message to deliver. I believe that the divine purpose behind the message of an earnest soul is always sufficient to clothe it with a useful measure of truth, and, therefore, to touch it with immortality.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

The Golden Rule.

It is significant of the divine nature of Jesus' mission that no greater moral precept has been uttered than his words which have since been called the Golden Rule, "All things whatsoever ye would that men should do to you, do ye even so to them."

The following paragraphs from an article which appears on the editorial page of a recent issue of the *Chicago Evening Post* are of especial interest at this time because they point so clearly to the only means by which the industrial and social disorders that have so long seemed to reign in our larger cities may be dispelled. The *Post* says:—

"This is the great need of the world to-day,—men who are righteous and just; men who are a shelter from the wind and tempest of striving mortals; men who are as refreshing as water in dry places; men who are as comforting as the shadow of a great, cool rock in the sun-beaten wastes of the wilderness.

"The man who is as the shadow of a great rock will be a man of peace. He will study to make the Golden Rule his life guide. Being righteous he will take no unfair advantage over his fellows. Being just he will settle speedily any controversy to which he is party. Seeing clearly and hearing plainly he will not misunderstand; scandal and deceit will be foreign to him.

"The surest and most direct road to rest and peace is to give rest and peace to others. The best lodge of refuge from 'rumors of oppression and deceit, of unsuccessful and successful war,' is in one's own mind and heart. Here one may retire at any time; here one may find rest and peace even in the turmoil of the streets, or in the clang and smoke of battle, or in the selfish and sordid rivalries of social and political life.

"To lovers of peace the land is weary enough, in all conscience, just now. Genuine peace does not seem to abide anywhere. The longing for the shadow of a great rock is universal; but the peace and rest which we all hope may follow this world-wide strife and turmoil and fierce conflict will come all the sooner to every man and every woman whose mind is ruled by righteousness and justice and whose heart is as the shadow of a great rock to all who are weary of the hot sands and the blistering sun and the enervating winds of the wilderness."

This is good teaching, and if all mankind were to follow it, the strife and discord which make up so great a part of human experience would soon vanish.

ARCHIBALD McLELLAN.

"In remembrance of me."

WITH the near approach of the annual Communion of The Mother Church many sacred memories gather to remind us of the experiences which have brought us to the present hour,—the paths by which we have been led from the plains of sense to the mount of vision. We may recall some dark days, days when the storm-clouds threatened disaster, when the way was rough and the goal uncertain, and worst of all, when much-needed guidance seemed to be denied us. In the darkest hours, however, an angel of His presence, whose

name is Duty, ever went before us, which, when followed, made our progress not only possible but certain. At times it may have seemed that we were sorely urged, that our strength and purpose would fail, but anon, fresh inspiration came with the Master's words, "This do in remembrance of me." When the lowliest duty was performed with this thought for inspiration, then did it become big with meaning—even "Our common daily life divine." By this ascending way many have been led to those spiritual heights where God is revealed in Christian Science. In the ratio of our faithfulness to duty in the past, and to what some one has named "the sacrament of our daily industry," were gleams of glory vouchsafed us in some of the ordinances of religion, and with these came an ever-increasing desire to trace more clearly the footprints of the great Teacher.

With the healing of disease and sin through Christian Science, has come the sweet assurance of Truth's perpetual presence, and when one who has thus been blessed asks what he may do to express his gratitude to God and to Christ Jesus, the answer is at hand, "Heal the sick." Unless one in this age had heard and heeded this command of the Master, there were thousands still walking in darkness and in the shadow of death, who, through our Leader's obedience and love, are now rejoicing in the liberty wherewith Christ makes free.

In following the Saviour's example we can do no other than heal the sick, the sinful, and the sorrowing at every opportunity which presents itself, and if human sense shrinks from the effort required, perchance from the world's scorn, these touching and tender words come down through the long years, "This do in remembrance of me." Every Christian Scientist who endeavors to heal the sick in accordance with the Christ-teaching, realizes, wherever he may be, that "union and communion" with divine Love which enables him to say, as did the patriarch, "Surely the Lord is in this place." If, in the endeavor to follow Christ, the bitterest trials should come, if absolute self-surrender be the requirement of the hour, the meek and lowly spirit of the Master, manifested by us, will lead to the victory of Soul over sense, for we serve the Cause of Truth not only on behalf of suffering humanity, but also, as he said at the last supper, in remembrance of him.

As we come together for our holy communion, which has no outward sign save that we kneel in silent adoration of the one God, the eternal Spirit who is our Life, the Christ-peace in our hearts should go out to heal the world's sickness, sin, and strife. Shall we not, then, consecrate ourselves anew to the service of the Christ, the service which fills every hour with noble achievements, the overcoming of every form of error, the fulfilment of every duty, in remembrance of that human life which revealed the Divine, and foretold the coming of Christian Science? In Bonar's beautiful communion hymn, he says:

I have no wisdom, save in Him who is
My wisdom and my teacher, both in one;
No wisdom do I lack while Thou art wise,
No teaching do I crave save Thine alone.

And e'en though deadly evils compass me:
Dark perils threaten, yet I would not fear,
Nor poorly shrink, nor feebly turn to flee;
Thou, O my Christ, art buckler, sword, and spear.

ANNIE M. KNOTT.

"Open thy mouth wide."

THE robins had selected the narrow edge of the window-blind for their foundation, and it seemed precarious enough, but it was well protected by a projecting cornice, and when the observing householder noted their sweet neighborliness and trustful plans, he tied the blind securely, and watched with keenest interest the building of their home. Their industry was both cheerful and continuous, and ere many hours the gleanings of the nooks and hedges had been shaped into a soft-lined nest which, though so frail and unpretentious, brought these feathered folk more contentment than ever palace brought its king.

In an astonishingly brief time the little house was peopled, and then the busy season came on. Here, there, and everywhere food was gathered, and however frequent their home-comings, the devoted parents always found a noisy bunch of open mouths awaiting them, and the bugs and worms were dropped into hungry depths with ceaseless round. To the parental call, "Open thy mouth wide," the nestlings were ever obedient, and they grew so fast and so strong that in a little while the freedom of the sunlight and of the sky became their glad possession.

As he followed these simple events, the observer was led to think of that truly Golden Age—an age which has been brought nigh for him and for many, through Christian Science—when the impulse to kill shall be cast out by love; when men shall become so kind, so inoffensive, and so just, as to be worthy the confidence which little birds and beasts would gladly and quickly repose, were they not taught by long and cruel experience to fear. He could but think, too, how much more readily these little brothers learn some lessons than do we, and that their vantage is gained through the quality of their trust and their obedience. They do not worry, and they do not limit a brooding beneficence by profitless questionings. If, like them, we did but open the heart and life "wide,"—if we became so sure of God, so trustful in Him that our first concern was to be entirely responsive to His call,—willing to accept whatever He gives, then would we attain and maintain that ideal attitude toward Truth which is the one contribution we can make to the consummations of the spiritual life.

Our "best gifts" are to be secured only as the limitations imposed by adverse personal preference are removed, through an expanding sense of the infinite wisdom of the Love which is over us. We are all likely to covet health, prosperity, and happiness far more than we do freedom from imperfections of character,—the little expressions of selfishness and unideality of temper which dishonor our Christian profession and mar our influence for good,—and sometimes we pray more sincerely than wisely for blessings whose only possible ground of Divine bestowal is that spiritual-mindedness, humility, and loyalty to right of which we have scarcely thought. We crave a consequent while forgetting its necessary antecedent, and the word to us is, "Open thy mouth wide,"—place no limits upon either the order or the fulness of Love's healing ministry.

The greatest discovery that the average man can make is this, that God's love for him is no fiction; that He is indeed a Father, and, Father-Mother-like, is actively interested in our getting on, our home-coming, our health, happiness, and success. This was the Master's constant teaching, and it has been re-written and re-said in all the centuries; but the birds—how the little things have distanced us in making it practical! and how worthy are they of Jesus' assuring words, when he said, "Your heavenly Father feedeth them!"

Christianity has never suffered a more serious disability than that of contentment with meagre and inadequate spiritual demonstration, upon the part of its representatives. This contentment not only dishonors God by practically denying the fulness of the Divine provision, and the desirability of a perfect healing, but the conscious or unconscious reserve of some part of mortal sense, some detail of its indulgence, preserves and continues that at-one-ment with error which is humanity's disabling weakness. Truth is absolute; this is its greatness and its good. It would illumine every sense, correct every impulse, exalt every desire, purify every motive, redeem every capacity, save unto the uttermost; and there can be no fitting growth, no satisfying peace until we yield ourselves unreservedly to the all-inclusiveness of its transforming presence.

Christian Science reiterates, with splendid insistency, this divine word, "I am the Lord thy God . . . open thy mouth wide and I will fill it." It imparts the realization that God alone is our wisdom, our strength, and our Physician; and it demands a full and unswerving consent that the complete-

ness of the Christ-life appear in us, until in all things—every thought, word, and deed—we are conformed to his image. Then we shall have come to our true Sacrament, and with Elliott we each shall sing, and sing continually,

Thy love unknown
Hath broken every barrier down;
Now to be Thine, yea, Thine alone,
O Lamb of God, I come.

JOHN B. WILLIS.

Letters to our Leader.

Boston, May 8, 1905.

Beloved Leader:—As the fragrance of the blossoming trees comes to me through the open windows this beautiful spring morning, I am reminded of an incident which shows how the fragrance of your noble, loving life is reaching every one whose "windows" are open to receive its message of light and love. When visiting a small town in the north of Ireland, we met a gentleman to whom we had sent a *Christian Science Journal* some time before. He was very anxious to hear more about your teachings and was told how I had been healed by reading *Science and Health*,—made perfectly well. He had known me as a very sickly child, and on my last visit to this town, when I was nineteen, it was not expected that I would survive the winter. My ills were then supposed to have been inherited. My father said for himself that he was better than he had been for thirty years, and his experience was best expressed in the words of Bartimeus, "whereas I was blind [groping in blind faith], now I see,"—am living in conscious understanding of God. This gentleman wondered very much that all our family in America had not accepted Christian Science, and could not understand how any one could entertain any prejudice in regard to your life and motives. He said that to him the fact that you had brought this message to the world, and were proving your word by your deeds, was sufficient proof that you were appointed of God, and no one else could have filled your place; that in his estimation you were following more closely in the footsteps of the Master than even his immediate apostles, for we read in Acts that handkerchiefs or aprons were taken to the sick from the body of Paul, while you do not permit any such thing, teaching rather that it is the Spirit which leadeth into all truth, and is the Healer of mankind.

This loving recognition of God's messenger, from one who had only had a copy of *The Christian Science Journal* to tell him of the message, brought to mind the words of Jesus, "Blessed are they that have not seen, and yet have believed;" also the words of the prophet Elisha, "Fear not: for they that be with us are more than they that be with them;" also these words from *Science and Health*, page 570, "Millions of unprejudiced minds—simple seekers for Truth, weary wanderers, athirst in the desert—are waiting and watching for rest and drink." As the eyes of the young man were opened to see the chariots of fire around the prophet Elisha, so were mine opened to see that divine Love was protecting the messenger of Truth to this age, and my fear of prejudice was rebuked. A little later, I found that the *Journal* which this gentleman prized contained an article from your pen,—a letter which you had sent to the Church in Concord, rebuking the human sense that would assume there was healing virtue in the flowers which you sent from Pleasant View, because they came from you. Faithfully and unselfishly you are ever turning our thought to Spirit, God, who clothes the lilies in their glory and is the Giver of all good.

May I now tell you how grateful I am for your teachings and example. Healed by reading *Science and Health*, I was at the point of asking many questions when your announcement in *The Christian Science Journal* of March, 1897, came to me, in which you spoke of "Miscellaneous

Writings" as the best instructor for the student, and that it would help best in the understanding of Science and Health. It was to me the fulfilment of the promise, "Before they call, I will answer." Your wish, expressed in the preface of this book, has become true in my experience, that this volume might be to the reader a graphic guide-book pointing the path. It has indeed been such to me, and words cannot express our gratitude for all it has been to us. In "Voices of Spring," page 330, I find a reference to "the fragrance of being," and thus it is that the fragrance of your consecrated life is going out to all and stirring within them desires for holier living. I thank you more than I can tell for your answer to the question about hell in your address to the Concord Church, and for your definition of "Heaven" given us more recently. Mr. Scott joins me in loving gratitude for all these things. The gentleman before mentioned is still interested. My father and he encourage each other in that little town, so others are uniting with us in the expression of gratitude.

Humbly your follower,

MINNIE A. SCOTT.

Cambridge, Mass., Easter Day, 1905.

Dear and Beloved Teacher:—I have had an experience recently in seeing the nature and method of certain claims of occultism, and by contrast the stainless purity, simplicity, and sublimity of Christian Science has caused me anew to adore. My heart longs to say something to you in better and more humble appreciation of the Christliness of your life and teachings, which exalts them above all that was ever in the world, save only the life and work of our divine Master. When we think of the myriad forms of mesmerism which, in belief, surround us, and remember that you alone, through unspeakable labor and love, have shown us the Christ,—made the way plain,—so that those who are faithful may avoid the snares and escape into purity and God, our hearts are bowed within us, and we pray that we may remember the command, "Take heed to thyself, and keep thy soul diligently, lest thou forget the things which thine eyes have seen, and lest they depart from thy heart all the days of thy life."

With earnest desire to be faithful, your loving student,
DAISETTE D. S. MCKENZIE.

Cripple Creek, Col., May 8, 1905.

Dearly Loved Leader:—I have long desired the privilege of individually thanking you for Christian Science and your loving, tender care to uncover the pitfalls and snares in human thought. From infancy to thirty-six years of age I never knew what it was to be well and strong. I suffered much, and then in one minute to be perfectly well, and my baby to be brought back from the grave, was marvelous. Pride and poverty was the destroyer at that time; but now it all seems nothing in comparison with the truth you have given us, the "rock in a weary land." Now we know in whom we believe. Our love and gratitude grow stronger with each year in the work.

MRS. SARAH M. SMITH.

WE again remind our friends that the Editorial Department has nothing to do with the business affairs of the *Sentinel*, and that orders and remittances should be sent to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Cultivate the thankful spirit! It will be to thee a perpetual feast. There is, or ought to be, with us, no such thing as small mercies; all are great because the least are undeserved. Indeed, a really thankful heart will extract motive for gratitude from everything, making the most even of scanty blessings.—J. R. MACDUFF.

Testimonies of Healing.

My wife had been an invalid for several years and was taking medicine nearly all the time without any perceptible change. About ten months ago a friend who had been healed through Christian Science loaned her a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and she commenced reading it. She gradually improved, and we finally purchased the book. She dispensed with the taking of medicine and improved daily during this time. I was also a great sufferer from indigestion, heart trouble, and rupture, and seeing my wife's improvement I consented to take absent treatment. I improved so that in two weeks' time I could eat with comfort, and my heart trouble ceased. I was, however, fearful that I could not be healed of the rupture, and continued to wear the truss, until one Sunday evening, before going to our service, I left off wearing it. I have not used it for over six months and I am perfectly healed. My wife and I are not only healed of our physical infirmities, but we have begun to see the truth, and we cannot in words adequately thank Mrs. Eddy for bringing it to us. We highly appreciate the inspired words of Science and Health, and we have found in it what we have been looking for these long years. We have sent our application for membership in The Mother Church and we expect to spend our time in the service of divine Love. We desire to thank all the dear Scientists who have helped us to grasp the truth.—ANTON V. SWATY, Mena, Ark.

With a heart full of gratitude to God, and to our loved and revered Leader, I give the following testimony. Last winter I suffered from a form of blood-poisoning caused by albuminuria. Some years ago I had the same trouble, and was under the care of *materia medica*, my husband being an allopathic physician. He was a graduate of, and later a teacher in, the University of Michigan. Although I had the best of care and attention, I was sick for months, and at times suffered intensely. My husband held a consultation of physicians, which resulted in a verdict of one chance out of a hundred for my recovery.

When this disease again came upon me with alarmingly aggravated conditions, I was almost overcome by fear, but with the aid of my son, a boy of fifteen years (we two being the only members of our household), I tried to work out the problem by faithfully reading the Bible and "Science and Health with Key to the Scriptures" by Mrs. Eddy. The subtlety of the disease seemed to be, that the intense suffering came in the night. We lived some little distance from any practitioner, making it hard for my son to go for help. I tried to be considerate of the child, who seemed to need sleep, but many times the only way to lessen the suffering was to go through the Lesson together, or have him read to me. Perhaps he would have to get up two or three times during the night to help me hold to the truth. When the morning light came, the pain would almost leave me, and each time I would think the demonstration made.

Some of the days I was able to work at the decorative work whereby I earned our living; other days I could not leave my bed. My son would lock me in the house while he went away to school. During this time I was able to attend nearly every church service. I made a mistake in not sending earlier for a practitioner, but a sense of straitened circumstances argued that I must not afford that which I could not pay for. This state of affairs continued for nearly four months, when I became very much worse. On a Wednesday evening I was taken with a congestive chill, which lasted for several hours. I seemed to be so near death that I begged my son not to leave me to go for help, for I felt that if I could not hear the spoken words as he read Science and Health, I must pass out. It

is unnecessary for me to speak of the pain and suffering which I then experienced.

When morning came, my son, who had been up nearly all night, went for a practitioner, and very soon harmony was made manifest. In talking with me, the practitioner was able to throw so much light upon the statements of Science and Health and the promises in the Bible, that I felt and experienced a most wonderful uplifting. It was suggested that some one be with us that night, my son having taken the entire care of me for four days and nights. I said, "We can send for a dear Scientist friend in Los Angeles. I am perfectly happy and won't mind being left alone." So about eleven o'clock my son left for Los Angeles, locking the doors, as he had done many times before.

I had been alone hardly an hour, when I was taken very much worse. Never before in my life have I endured such pain and suffering as came upon me then. I faithfully tried to realize the truth and to read Science and Health. Finally I could no longer see, and could only whisper, "O God, leave me not! O God, leave me not!" How material earthly considerations faded away, in those supreme moments of chastening when I met God alone face to face. Even the thought of motherhood was seen in a different light.

I soon became unconscious. My son told me afterward, that upon his return home early in the afternoon, he found me as he supposed quietly sleeping; when he spoke to me I did not answer or move, so he very happily went about attending to other duties in the house. When the practitioner came at 5 P.M., he answered, in reply to the question, "How is your mother?" "Why, she is all right, she has been asleep all the afternoon, and hasn't moved once." The practitioner came into the room where I was lying, and found every indication of death. I do not know how long I lay in this condition, but I became conscious of some one talking. It was the practitioner declaring the truth aloud,—the voice seeming to come from a long distance,—"He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty. I will say of the Lord, He is my refuge and my fortress: my God; in him will I trust." I cannot describe the emphasis which was placed upon the words "My God; in him will I trust." It was laying hold upon the Infinite. The ninety-first Psalm was repeated over and over again, interspersed by statements from Science and Health, which I recognized immediately.

Words fail me to express the illumination which seemed to come to my consciousness as I listened to those life-giving statements. Every word uttered came from the Bible and Science and Health. It was the truth, inscribed there for me, and for every one of God's "children; no mystery but the "mystery of godliness," no hidden, unfathomable doctrine, but the clear crystallized statements of truth, for truly "God is no respecter of persons." At nine o'clock I ate an egg and a piece of toast, the first food in four days which my stomach retained. I then walked without aid to a chair, and sat up while my bed was being made. I rested comfortably during the night, and the next Sabbath morning found me at church.

While I am grateful for the wonderful manifestation of divine Love in bringing me back from the gates of death, I am more grateful for the spiritual uplifting which has come in the working out of many problems. The raising from death was but the beginning of a greater work which is being done for me. My son and I have been blessed beyond measure, and as I write, the sacred memory of that hour comes to me with new significance,—a bugle call to action. I desire to show my gratitude to our beloved Leader by unswerving obedience to the rules given in our text-book, "Science and Health with Key to the Scriptures," and in the Manual. I would like to acknowledge the great good gained from our loved *Sentinel* and *Journal*.

They bring the needed word in season. My heart goes out with love to all our dear workers everywhere.

MRS. WITA J. WRIGHT, Pasadena, Cal.

For the great help, satisfaction, and peace which I have gained through Christian Science, I am very thankful to her whose clear insight of truth has opened the way to the real understanding of God and man. Before studying Christian Science I never realized the utter impossibility of the existence of two powers,—good and evil,—nor had it ever occurred to me that man, as we see him, sinful, sick, poor, and with sorrow and death ever around him, could not be the man created by God. As I look back over the four years since Christian Science was first brought to my notice, I can but wonder how I could ever have been satisfied with beliefs so illogical and contradictory. Now I find an answer to all difficulties, and a remedy for error of every kind, because Christian Science goes to the root of all evil and thus destroys it. The Bible is a new book to me, the passages which have been known since childhood have a new meaning, and the life of Jesus, our great Wayshower, is connected with our own in a way I never understood before. In my own experience I have found latent errors unmasked, but at the same time the way to conquer them is made plain. Fear has seemed a strong enemy to overcome; I find it a foe which meets me at every turn. Criticism is also another enemy, which, through Christian Science, I am learning to face with a better understanding than I ever had before, for I now see that humility is the gateway to harmony, and self-love is the root of condemnation of others. Through the purifying influence of Truth the mental atmosphere has been cleared and the physical troubles have dropped off. Christian Science has enabled me to face troubles which otherwise would have been unbearable; it has kept me in perfect health and strength, because through all the time of strain, I have learned, though only partially as yet, to know that there is no other power but God. The necessity of watching my thoughts is becoming more clear to my consciousness. The seeming attraction of certain phases of thought, and the great care and watchfulness needed to overcome this attraction, is one of the most important lessons to me, for thus I am finding the remedy for one of the most subtle errors in my upward path. Through this higher understanding of Truth, a clearer light has also come respecting the Love which is God and which our Master revealed to the world. Through the teachings of Science and Health, I am beginning to see that Jesus loved because he distinguished between mortal man and the spiritual man, and with this fresh light we, as his followers, may thus reflect Love. For the removal of all these clouds and for the brightness of a religion which can thus be demonstrated, I am very grateful to God, and to our Leader.

MINNIE SYMONDS, Sydney, New South Wales.

It is over four years since I took up the study of this truth. I had just returned home from California and Arkansas, where I had gone three years before, because of nervous prostration. I was somewhat better, but as I had been a cripple from a child two years old, and had worn heavy iron braces on my ankles since having two operations performed on them, the suffering was so intense I would often come home and throw myself down and pray to die. I had taken the Bible to my pastor and read to him about how Christ Jesus healed the sick, and how he said greater things than these would be done; also how we were told if any were sick to call for the elders of the church. I was told, however, that these things were not done now; but I was not satisfied until the book, Science and Health, was put into my hands. Even then I did not know the truth, and the pastor told me that Christian Science was an old, exploded idea of India, but I knew nothing like that could have healed

my eyes; I knew that it was Spirit, God, who did it. I continued to study, and in a few days another of my enemies came up in the form of headache, and I said, Now I am going to see if I cannot put this Science to use. I did so, and although I was never before without some kind of a headache for more than a few days, I have not had one now in four years, and the nervous prostration was healed the first year, with the pain in the back of my head which the doctor said would eventuate in brain fever. I believed that if God could do so much for me, He could also take care of me without my wearing five-pound braces. As I was going to leave my home, I got a practitioner to treat me; and although I could not walk without the braces, I took them off and started on my long trip to the South, my practitioner going one day's travel with me. I only wish I could tell how Truth was with me on this trip. I seemed to be carried in the arms of divine Love. When I did reach my people, and none of them understood Science, I came down, as it were, although the suffering left in a short time, and the sores on my feet were healed.

My limb has lengthened out about an inch and the drawn cords have loosened and are growing. I know that He who has begun this good work in me will complete it, and that nothing can interfere with my progress. I wish to gain an understanding, so that I can not only help myself but others also. I am thankful to God for giving us this truth through Mrs. Eddy, and I know He will reward her.

BELLE D. NEUBANKS, Houston Heights, Tex.

When my daughter turned to Christian Science for treatment, I began to investigate it, and found it a religion that satisfied the whole need. At the time I commenced the study of Christian Science I was a physician of thirty years' practice. I had also been interested in evangelical work, but was never fully satisfied with the results therein obtained. In looking back now over the past, I can count fifty years spent in darkness and gloom, at the end of which time I had become a skeptic, and almost doubted the existence of God. When I found that "Science and Health with Key to the Scriptures" by Mrs. Eddy, was the Christian Science text-book, I purchased a copy, and as I began to understand its teaching, I realized that I was becoming a new creature, as I caught a glimpse of the real, spiritual man. I cannot express as I would, my gratitude to our Leader for the light she has given us through Christian Science, which is one of the greatest blessings that heaven has bestowed upon man. It gives joy and peace to the broken-hearted, raises the fallen, gives strength to the weak; for it teaches that God is all in all and that there is none beside Him.—J. H. LEEMAN, Galena, Kan.

It is with a deep sense of gratitude to God, and to our revered Leader, that I wish to express my love for Christian Science and what it has done for me. Truth has been our family physician for over seventeen years, and has not been found wanting. I have, however, found it very necessary to keep thought firmly fixed on Truth, in order to reap good results. I feel that I owe all I have and all I am to Christian Science. I was healed of many ills when I first came to this wellspring, to drink of the water of Life.

Asthma and female weakness yielded fully to treatment, though I was not healed in a day. My healing was slow and required an effort on my part before I realized I was healed. In later years, even when severely tested, Christian Science has always been a sure remedy. I will speak of two demonstrations which we have had in our family. Our son was healed in three days of a gunshot wound. My husband was thrown from a large load of hay, which caused a very bad dislocation of the elbow and a fracture, but in a very short time the bone was set and he took dinner with the family. Our understanding of

Christian Science did the work, but the healing seemed slow though sure. Can we half realize what Mrs. Eddy has done for us, in pointing out the way for us through Science and Health?—IRENE A. COOPER, Richmond, Kan.

Almost four years ago, faithful and learned physicians of Chicago and New York City said that I could not last long, as there was not a healthy organ in my body; that an operation to stop the constant hemorrhage might postpone the event, but they refused to undertake this task unless I would go to a hospital to be "built up," which I did. The operation was performed, and according to the surgeons it was "as interesting a case as had ever been there." In about a month after I was able to attend to ordinary duties, the same trouble returned, which was most discouraging. I was also suffering from catarrh of the stomach, which was said to be incurable, chronic constipation, great loss of flesh, and extreme pallor. Add to the physical suffering, the loss of mother, husband, baby, and sister, and it will be seen what hopelessness was my constant companion. Many and frequent were the prayers offered—in the only way I then knew how to pray—that I might die too. Just about this time Christian Science was suggested to me, and accepted. In three weeks' treatment all physical trouble was destroyed. I then began to study Christian Science, and in due season there was laid a firm foundation upon which to build health, holiness, and happiness. It was while I was yet young in this study that my sorrow left me as easily as the laying aside of a superfluous wrap, and left instead the peace which passeth all human understanding.

Should it be considered strange that such freedom causes us to love and revere the author of Science and Health, who has shown so clearly by precept and example how to realize the kingdom of heaven within us? Would it not be unnatural if we failed to experience this gratitude?

MRS. M. J. HALLER, San Francisco, Cal.

Many years have elapsed since I was healed of an inherited affliction. From my earliest remembrance until Christian Science came to me, I was under one continued siege of suffering with my eyes. By great care, no unnecessary reading, and comparatively little that was necessary, I succeeded in getting half through my second year in high school, when my sight failed utterly. Twice, for a few moments, as a direct result of prayer and the exercise of will-power, I succeeded in reading a few lines. I could not even distinguish any one whom I knew well, when across the street. My last essay written at school was written with my eyes closed. So determined was I to complete my school work that for some time I attended the recitations to listen only, being excused from study and recitation. My ambition was to gain a thorough education and enter the ministry. I had a Sunday School class of about thirteen scholars, most of whom had never seen the inside of a Sunday School until my untiring efforts brought them there. It was in the midst of all this, and other church work, that my sight began to fail more rapidly. I was compelled to abandon my class, as well as my other church work. The superintendent wrote, urging me to come back and at least sit by my class. I prayed earnestly, then took up the large family Bible to read, but could not see a word of that large print. I said, "If the Lord wanted me to teach this class, He would surely give me the eyesight necessary to do it." Meantime, I had on glasses that a leading oculist of the city had prescribed. I was trusting in glasses, doctors, medicines,—the arm of flesh, one moment, and in the Lord the next. Little did I understand the Scriptural declaration, "I am the Lord. . . my glory will I not give to another."

These thoughts finally presented themselves to me, "Am I really accomplishing any good, after all? If so, it would seem that God is working against His own cause, here on

earth." To smite and hinder those who are working in His vineyard, would not be reasonable. I called on many ministers, who all informed me that it was God's will. My attempt to harmonize this thought with the Biblical statement, "He doth not afflict," proved a failure. Both could not be true.

I questioned further, "But did I not hear you read at church, 'God is no respecter of persons'? How, then, could He afflict me and not others?" How I did long to be able to read the Bible for myself and not have to take it, or rather fragments of it, at second-hand!

My questions were answered, and the blessing of reading the Bible was granted me through Christian Science. I went to a Christian Science service for the sole purpose of obtaining consolation over my disappointment with my heavenly Father, whom I did not then understand. Paul said to the Athenians, "As I passed by, and beheld your devotions, I found an altar with this inscription, TO THE UNKNOWN GOD. Whom therefore ye ignorantly worship, him declare I unto you." It is quite evident that Paul did not approve of the belief in an unknown God. Christian Science made known to me the true God of whom the Scripture saith, "He doth not afflict." How could I believe consistently that God would heal me, if I also believed it was His will for the affliction to exist?

The oculist had said, "These glasses will relieve, but never heal you." The Scripture said, "I [God] will heal thee." "I will take sickness away from the midst of thee." Which should I believe, God or the doctor? The very day that I learned whom to trust, I was healed. That very day my belief in the law of heredity was shattered; it was absolutely proven to be no law, and in its place this Scriptural statement was proven true: "In those days they shall say no more, The fathers have eaten a sour grape, and the children's teeth are set on edge." That the law of heredity is not a law of justice is unquestionable. How, then, could it be a law of God, inasmuch as God is just? My healing was instantaneous! there could be no mistaking it; and so thorough that one doctor was alarmed to hear of a severe test which my eyes endured. He said, "She will go blind yet, and that within five years." It is now nearly thirteen years since my healing, and during that time there has been scarcely a day which has not been spent partly or wholly in reading, writing, embroidering, or in some work which tried my eyes severely.

Never can our all-wise, all-loving, heavenly Father—as revealed in Christian Science—withhold any blessing; but a lack of understanding does withhold many blessings. To Mrs. Eddy, as God's faithful servant, belong unbounded honor and love—the love that we should not merely profess but endeavor to prove by noble lives.

MAGGIE M. HAPER, Cincinnati, O.

I send this testimony with loving gratitude to our dear Leader, for the text-book, *Science and Health*. For twenty years I was sick, and at times suffered indescribable agony. I was treated by physicians at home and abroad, no two agreeing as to the nature of the malady. Drugging was thoroughly tried, also electric treatment, but without avail. Finally, an operation was considered necessary, but I came out no better physically and much worse mentally; indeed the physical suffering was so great, and the mental darkness so dense, that death seemed to be the only way out of it. In the year 1894, I left the church of my fathers, disheartened and discouraged, determined to search for God in my own way. I then attended spiritualist meetings for a year, and failing to find God there, I read and searched the writings of several well-known agnostics without finding what I needed. I then turned to Ruskin and Emerson, and from the latter received the only ray of light I had found thus far. For three years the burden of the cry within me had been to know what God is. The physicians had told me that operations might relieve, but could

not cure me, therefore I felt that my stay on earth was short, for to undergo another operation seemed impossible, and suicide appeared to be the only alternative; but first I must know what God is. While under a physician's treatment in 1898, the following remark was made to me by a friend: "I have found the first person I ever saw who *lives* her religion; she never thinks or speaks ill of any one, and she goes to God for healing when she is sick. She calls herself a Christian Scientist." These words sank deep down in my thought, and for the first time in twenty years hope and faith began to dawn.

As soon as I could I called upon the one of whom such a good account had been given. I thought it strange that she did not talk her religion; however, the next time I called the subject was mentioned, and very wonderful but very far away it seemed to be. As I left the house she said, "I have a book here, called *Science and Health*, that I would like you to read." When I reached home I glanced through the book, and my attention was arrested by the statement that all is Mind. I thought, as I laid down the book, "It is like the Bible,—a good book,—but it is not for me." However, the statement that all is Mind stayed with me, and seemed to repeat itself over and over again. I was awakened in the night by the thought, and in the afternoon of the third day the longing to know what God is became so intense as to be almost overpowering. Gradually, such a deep, sweet sense of calm and peace and quietness seemed to go all through me, and clear and distinct as a voice came the words, "All is Mind;" "Be still, and know that I am God." Everything within and without was light; it seemed that I was lifted completely out of the sense of a material body. A few hours later, when the thought of my body returned, O joy unspeakable! I found I was completely healed; all sense of swelling, pain, and weight had disappeared; but far more wonderful was the fact that at last I knew what God is.

In a few hours all drugs of every name and nature were thrown away. We did not tell the physician not to call again, but he did not come. I stood forth transformed and reformed. When I again took up *Science and Health*, every sentence, every word was illumined. This was six years ago, and since that time the understanding gained from the study of the book has been our remedy for every woe.

It was my privilege to attend the dedication of First Church of Christ, Scientist, of Concord, N. H. Words are inadequate to express my gratitude for this blessing, for the spiritual uplifting, for the desire to walk more meekly in the path our Leader has pointed out, and for a faint glimpse of the utter nothingness of materiality, for a brief glorious glimpse of the allness of Love,—for this, and far more, I am deeply and humbly grateful.

MRS. SUSIE CORFIELD, Salt Lake City, Utah.

Whatever we may think of Christian Science or Christian Scientists, we are forced to admire their devotion to Principle. It is too late to rate these people fools. We fool ourselves if we do that. They come from the most intelligent and most respectable and the most orderly classes. We shall not all follow them; but we may find we can learn something from them. And we should be careful to know ere we judge them. What in all their gatherings they seem to emphasize more than even Mind-healing is the duty to love your enemies, do good to them that hate you, and pray for them that spitefully use you and persecute you. There is no harm in that. We may possibly learn from them that it is "up to us" to walk a little more closely with God and His Christ than we have thought practicable. Surely, if ever people when reviled, reviled not again, these are they. How patiently they take every criticism.

Granite State Free Press (Lebanon, N. H.).

From our Exchanges.

The "kingdom" was the social ideal of Jesus Christ. It was a divine human commonwealth, a moral, spiritual order to be erected upon this earth. It was "light" that by radiation and reflection would illumine every morally dark place; it was "salt" that would prevent degeneracy and decay; it was spiritual ozone that would interpenetrate every soul with its inspiring, life-giving potencies. This divine order began with Jesus' own life. Of those who shared his ideals, motives, purposes, life, he said, "The kingdom of God is within you;" it is a spiritual contagion that spreads from soul to soul. The individual is the "seed" that, by incorporating others, becomes a "tree." The individual is the "leaven" by which the whole "mass" of humanity is to be changed. It is in the individual. Christ's true followers have been constantly enlarging the borders of this kingdom. Jesus had no doubt that it would become universal.

REV. ANTHONY BILKOVSKY.

The Universalist Leader.

When we read the words, "Ye shall receive power, after that the Holy Ghost is come upon you," it is surely pertinent to inquire when were these words spoken? Has the promise which they contain been fulfilled? The advent of the Spirit is here, as always, referred to as a distinct event. Has it taken place? Has the Spirit come upon the church? Need we answer? The Spirit is here, and here forever to abide. His presence is therefore to be always assumed. Instead of tarrying for his coming, we are to rejoice in his presence; instead of waiting for his endowment of power, we are to go to work believing that all the power we need has been made over to us; instead of waiting through weary years of deferred hope for him to come and take possession of us, we are to yield ourselves at once to His influence, doing the work that He bids us in the strength He gives us.

REV. JAMES M. CAMPBELL.

The Homiletic Review.

The crying need of the Church to-day is for enthusiasm—a manifested sense not merely of the importance, but of the immediate and urgent importance, of the life of Christ. We have so large a work to do, and the difficulties and doubts of our time are so pressing, that nothing less than this enthusiasm will afford the motive power for effective and persevering action. The world will not trouble itself to put a value on our message larger than our own clear estimate of its worth. It is far more likely to be impressed by our zeal than by our reasons. For the fire of the Christian faith kindles from heart to heart rather than from mind to mind. And lukewarm hearts have little power of passing on the flame.

The Congregationalist.

What must it have meant to the disciples, after the disappointment of all their hopes in the death of the Master, to realize that he was alive! It mattered not that the new life was not the same as the old, that all their plans must be rebuilt and their hopes reshaped. They were raised with their risen Lord into a new and greater joy.

The Universalist Leader.

The minister is a craven who has a vision of truth, feels its force, but is afraid to utter it lest he be called a heretic, lose caste with his Church, call down the censure of ecclesiastics, or the criticism of the press, be thrown out of his living.—*Western Christian Advocate.*

It is wiser and happier to dwell on merits than on defects. It is better to think of the light in other men's souls than to measure the length of their shadows.

REV. SAMUEL A. ELIOT.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.

Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea: 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Attorney General Moody has written a letter to Secretary Taft of the War Department, giving his views on the general subject of peonage and its bearing on the employment of "coolies" in digging the Panama Canal. He finds that "coolieism," so-called, is a condition of involuntary servitude, and says: "In the employment of labor upon the Canal the utmost care should be taken to exclude the conditions which have been indicated as those of involuntary servitude, or any other conditions of like effect or tendency. This care should be exercised not only in making the contracts to which the United States is a party, but in scrutinizing the contracts, usages, and practices between those who agree to furnish contract labor to the United States and the laborers themselves. What rules, regulations, officers, and inspectors may be needed, in order that the employment of labor may not be violative of the thirteenth amendment, may well be left to the discretion of the Commission."

The opinion of Attorney General Moody regarding the application of the eight-hour law on the Isthmus of Panama has been made public. He holds that the act of August 1, 1892, which limits and restricts to eight hours the daily service of laborers and mechanics employed by the Government of the United States or by any contractor or subcontractor upon the public works of the United States, applies to the employment of laborers and mechanics in the construction of the Panama Canal.

The Albright Art Gallery, Buffalo, N. Y., was dedicated May 31, in the presence of ten thousand people. Work on the structure was begun in 1900. The gallery cost \$750,000 and a maintenance fund of \$10,000 has also been provided by the donor. The structure is of clear white marble, of the pure Ionic type, 250 feet long and 150 feet deep. The portico is a reproduction of the north porch of the Erechtheum on the Acropolis at Athens.

Charles J. Bonaparte, a grand-nephew of Emperor Napoleon, is to succeed Secre-

tary Morton in the Navy Department, who has asked to be relieved July 1. At the time of the investigation into the Post-Office frauds Mr. Bonaparte was retained by the President to assist the Government attorneys and later was detailed to make an investigation into Indian affairs. He is known as a staunch civil service reformer.

Of the American yachts recently competing in the ocean race for the Emperor's Cup, the Ailsa, Thistle, Hildegard, Fleur de Lys, and Endymion are entered for the Heligoland Cup race as racing yachts; and the Apache, Utowanda, and Atlantic in the race for auxiliaries. The race starts June 17 off Dover and finishes at Heligoland. It is a handicap race.

President Roosevelt has proclaimed the entire Wichita forest reserve a game preserve. The reserve is in Oklahoma and contains 57,120 acres. He has also proclaimed a new forest reserve in California to be known as the Lassen Peak reserve, which covers part of the northern Sierra Nevada range and contains a fraction under 900,000 acres.

President Roosevelt last week addressed identical notes to Russia and Japan, suggesting, in view of the good of the world, the desirability of peace negotiations being entertained by the two Powers in question and offering the good offices of the United States. Both Powers have accepted the note and replied favorably.

Of 2,860 voting graduates and non-graduates of the Massachusetts Institute of Technology, 2,035 opposed the proposed alliance with Harvard and 834 favored it. The percentage of those favoring the alliance was higher among the non-graduates than among the graduates.

Canadian and American surveying parties, which were sent some months ago to Alaska to determine the Alaskan boundary, have established the fact that Kate's Needle and Devil's Thumb, two of the highest mountains in the world, are in the territory of the United States.

After observations covering a period of several years, the astronomical observatory of Harvard University announces that the star technically known as 174406, R. S. Ophiuchi, is to be classed as a new star rather than as a variable, as formerly supposed.

Many influential citizens of Oregon, including both State representatives and the senior senator, are under indictment before the Federal Court in connection with the Oregon land frauds.

Foreign.

The *Scientific American*, commenting on the Russo-Japanese naval battle, says: "The explanation of the result is to be found first and last in the Japanese people themselves—in certain excellent traits of their character, many of which are due to a system of ethics that is older than our western civilization. Among these may be mentioned: Intense patriotism; self-denial; scrupulous honor in all matters affecting the welfare of the State; a keen sense of duty; strict discipline; unquestioning obedience to authority; absolute unity of purpose; a firm belief in the destiny of their race; patience and endurance; an absence of self-consciousness and posing, that may well put our 'white' civilization to the blush; a close attention to detail; and lastly, a combination of great prudence and forethought with a marked ability to adapt themselves quickly to the circumstances of the hour."

The Norwegian Storthing, on June 7, declared the union between Norway and Sweden under one King to be dissolved, and that the King had ceased to act as King of Norway. The Storthing further empowered the present State Council to act as a Government of Norway until further notice and to exercise the power heretofore appertaining to the King. An address to King Oscar was adopted, declaring that no ill-feeling was en-

tained against him, his dynasty, or the Swedish nation. There is some feeling that the State may become a republic instead of a monarchy. On the 9th the new Norwegian flag was hoisted in place of the old one on all the fortresses and warships. Sweden thus far has not recognized the revolt.

It is said that no doubt is entertained in diplomatic circles that the proposal in behalf of Morocco to submit the French proposals to a conference of the Powers signatory of the Madrid convention, will be categorically declined by the British, French, Spanish, and Russian Governments. It is thought in some quarters that Germany may utilize the Moorish proposals as a pretext to enter into direct negotiations with France, in which case the Moroccan question may possibly be settled in Paris or Berlin.

King Alfonso XIII. passed from France last week to England and was received there with great cordiality. King Edward himself supervised the details of the elaborate ceremonies. He is the first Spanish King to visit England.

M. Delcasse, Minister of Foreign Affairs, recognizing that differences of view had arisen between himself and his colleagues relative to the execution of the foreign policy of France, particularly concerning the direction of the negotiations with Morocco, has resigned.

The Government of Chile has presented to Congress a motion to raise a loan of \$20,000,000 for the construction of railroads throughout the entire country. These railroads will form a part of the Pan-American Railroad.

To commemorate the victory of Admiral Togo an immense lighthouse, capable of flashing a light eighty miles, is to be erected on Okino Island in the Japan Sea.

Three Russian cruisers, which escaped from the Japanese in the Korean Straits, reached Manila and have there finally been interned.

Industrial and Commercial.

Practically \$1,000,000 worth of automobiles and parts thereof have been exported from the United States since the beginning of the present calendar year. In 1901 twenty-six automobiles, valued at \$43,126, were imported into the United States from France. During the last fiscal year France supplied 368 automobiles valued at \$1,117,494, while from all other countries the total number was 55, valued at \$176,666.

The Mexican Light and Power Company, a Canadian concern operating in Mexico City, has purchased all the light and power plants of the city. This is believed to be the largest individual deal in the commercial history of Mexico.

General.

On the occasion of the recent outing of the Boston Commercial Club at Lynn, Professor Elihu Thomson of the General Electric Company, just to demonstrate how little danger lay in electrical force when properly and scientifically handled, permitted over a half-million volts to pass through his body without displaying the slightest tremor or experiencing the slightest physical discomfort from the test. Two thousand volts, administered or sustained under different conditions, is considered fatal.

In a recent run from Chicago to Pittsburg, a test passenger train made 62 miles in the first hour, 73 the second, 71 the third, 68 the fourth, 62 the fifth, 51 the sixth, 62 the seventh. The train covered 468 miles in 440 minutes and ran mile after mile at the rate of 42 to 44 seconds. The run from Chicago to New York was made in 17 hours flat. The Pennsylvania has since established a regular 18-hour train.

The production of all kinds of rails in the United States in 1904 amounted to 2,284,711 gross tons.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

An Interview with Rev. Mary Baker G. Eddy.

(Copyright, 1905, by The Boston Herald Co.)

BY SIBYL WILBUR.

A CARD.

My recent interview of a few moments with Sibyl Wilbur of *The Boston Herald* was prolific. I confess to having yielded reluctantly to meet the occasion for quieting the billows of public opinion, while constantly signalling it as to my course and hoped-for haven. But what a grand, calm call was hers, what a short time it took for us to talk when touched by the truth of an honest purpose! By speaking less and feeling more we parted reciprocally blest. Will Miss Wilbur accept my thanks for her kind courtesy, for leaving me with not one hour less in which to put my mite with hers into the vast treasure-troves of eternity, to draw the interest on deposits gained from minutes, till we receive the principal whereof God keeps account? May she, because of her goodness, broaden her wide range of usefulness; and I, work on to widen mine into paths of peace; till the burden and heat of the day are done, the eventide is past, and bird and blossom wake in the sunshine.

MARY BAKER EDDY.

Pleasant View, Concord, N. H., May 24, 1905.

I have seen Mrs. Mary Baker G. Eddy. I have conversed with her and secured her answers to a number of questions concerning Christian Science. I have held her hand in mine, felt the touch of her thought, listened to her kindly blessing, and received from her lips a message to the world.

Mrs. Eddy is alive and well, she is in full possession of her mental and physical powers. She has no visible physical malady; she is a beautifully poised, physically etherealized, exquisitely fashioned woman of advanced years. Her mind is clear and energetic, marvelously alert and delicately attuned. Her eyes are radiant, her voice like a bell. In a word, Mrs. Eddy seems to have reached an adjustment between her physical and spiritual powers which promises to carry her existence through many years to come.

The secret which the world has been trying to wrest from the closely guarded home at Pleasant View, the secret which for several years has been construed by suspicion to mean illness, physical or mental collapse, and even, by the extremists of worldly-mindedness, the actual dissolution of Mrs. Eddy and the substitution in her place of a representative—this secret has been disclosed, and in its disclosure is a rebuke for all the petty suspicions which have been heaped against a blameless life.

The secret of Pleasant View is no secret at all. It is the plain and simple truth, which any well-ordered mind might readily have fathomed without the necessity of painful intrusion upon the well-earned seclusion of a woman who gave the full measure of her services to humanity before retiring from the theatre of human activities.

At Pleasant View, in Concord, N. H., lives a remarkable woman, over eighty years of age, who is going through the gradual process of completing the spiritualization of her faculties. She is performing the miracle of human life which may be witnessed in any home where dwells a grand

old father or mother. She is performing the miracle which the saint-like Leo, the late father of the Catholic Church, performed, when he prolonged his life to a grand old age by isolation from the world, when he had opportunity for the spiritualization of his life by reading, prayer, and contemplation, uttering annually a vigorous and spiritually visioned encyclical.

There is no great palace at Pleasant View, such as is the Vatican at Rome; no house with its hundreds of corridors, its doors opening upon doors, its every passageway guarded with soldiers, to insure quiet and sanctity from intrusion; there is no walled garden extending for miles in which one may walk alone with nature and God, sheltered from the prying eye of vulgar curiosity. There is only a simple cottage home set in a few acres of low-fenced ground. A ring of the front door-bell means that every member of the house is disturbed, and the entrance of a visitor into the cottage hallway means an actual intrusion upon a family whose chief member is the ~~most~~ influential woman living in the world to-day.

TRADITIONS SHATTERED BY THE TRUTH.

The writer is not a Christian Scientist. It is necessary to confess at the outset that the interview with Mrs. Eddy was desired, because Mrs. Eddy had become the object of the most intense curiosity of the public press in America. Every great newspaper in the country has striven within the past few years to get an audience with the head of the Christian Science Church, and, failing in this quest universally, they have built up an office tradition which is as monstrous as it is silly when touched with the dissolvent of truth.

The story which has gradually been built up since Mrs. Eddy retired from active life, over ten years ago, has been that the Christian Science Church was founded on the doctrine of everlasting life on earth; that it has declared that death shall be overcome; that it has not the courage to face the inevitable physical dissolution of its Founder. Therefore, as the world no longer had the privilege of seeing Mrs. Eddy, it was likely, nay, probable, that Mrs. Eddy had fallen into physical disability, or had become weak-minded, if indeed she had not already passed away.

There were other stories to the effect that Mrs. Eddy was alive, but that she was daily treated by masseurs and beauty doctors; that the dignity of years was travestied by applications to her person; in a word, that she was tricked out by artificial means to keep up a semblance of youth for the bolstering of the impossible dogma of everlasting youth. A woman's instinct naturally made this point one of especial interest, and, besides, I was determined to be able to give to the world the exact facts.

That the Christian Science Church will not be placed in any predicament for its philosophical teachings in the ultimate demise of its Leader, is made clear by the explanation of the real teaching of Christian Science on this subject of everlasting life, which has been given the writer by an authoritative statement from a member of the Publication Committee. This statement shows the absurdity of the popular misconception of the doctrine.

"We do not claim," said this Christian Scientist, "that it is possible for one to live eternally in the flesh. We accept the Scriptural prophecy that eventually mankind will have

attained to such a high degree of spirituality that death will cease to be a phenomenon of human experience. But centuries may pass before such an exalted state is attained by any mortal. Christian Scientists believe, however, that already longevity has increased through their religious teachings, and that it will continue to increase in each successive generation."

This explanation answers effectually the critic who delighted in imagining that the Christian Scientists had got themselves into a corner; and as to the more flippant comment on the artificiality of Mrs. Eddy's personal appearance, it is possible for the writer to assure the loving followers of Mrs. Eddy, that no indignities have been perpetrated against their Leader; that she is surrounded by loving and devoted friends; that she is the mistress of her own house in an undeniable way; that she is growing old as beautifully as any woman ever did.

And after meeting her and her family, I believe that when, in the fulness of time, the curtain of everlasting life is lifted higher, the world will know of it, and that she will pass on to the greater glory with the triumph of Christian faith, and all Christians the world around will be ready to acknowledge that a useful life has closed as fall the cadences of music, as comes the winter solstice after the long glories of autumn closing in upon the harvest of the year. There will be no greater miracle advocated in her behalf by her million of followers than the one great miracle of a good life which comes to each human being out of the womb of time.

SECURING AN INTERVIEW WITH MRS. EDDY.

The interview with Mrs. Eddy was not secured without considerable delay, without a long series of arguments with various members of the Governing Board of the Church, without eventually overcoming the opposition of the manager of the Publication Committee, Alfred Farlow, whose offices are in Huntington Chambers, Boston. The attempt to have an interview with Mrs. Eddy was begun in February by *The Boston Herald*, and culminated successfully on Sunday, May 21.

The objection which Mr. Farlow made to giving a letter of introduction to Mrs. Eddy, or her secretaries at Pleasant View, was a very natural one. He said that he had not the authority to make demands on Mrs. Eddy's time, and that he did not like to disturb her with requests which she had repeatedly refused to consider. He said that her days were fully occupied, and that it was his duty to assist in protecting her from intrusion. Nevertheless, Mr. Farlow eventually consented to refer *The Herald's* request to Mrs. Eddy, and endeavor to win her permission for the visit.

The kindly offices of Mr. Farlow resulted in a letter from Mrs. Eddy to *The Herald's* representative. The letter was written on her note-paper, under the embossed seal of her crest, the motto of which is "Vincere aut Mori." The date was March 25, and the letter read:—

"My Dear Madam—You will excuse me, since I must be uniform in declining the honor of calls from newspaper reporters. Christian Science cannot be carried on in certain worldly ways. Accept my thanks and this book. Please read page 464, paragraph 1. Sincerely yours,
MARY BAKER EDDY."

The letter was written on a typewriter, but the signature was in the clear handwriting of Mrs. Eddy. It is a noticeable fact that it is quite modern in style, and remarkably steady for one of her years. The letter was accompanied by a copy of Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and the paragraph indicated read as follows:—

"It has been said to the author: 'The world is benefited by you, but it feels your influence without seeing you. Why do you not make yourself more widely known?' Could her friends know how little time the author has had in which to make herself outwardly known, except through her labori-

ous publications,—and how much time and toil are still required to establish the stately operations of Christian Science,—they would understand why she is so secluded. Others could not take her place, even if willing to do so. She has therefore remained unseen at her post, working for the generations to come, never looking for a present reward."

The message was entirely courteous, but the refusal seemed complete. Yet *The Herald* was not willing to give up its purpose of obtaining some data of interest about Mrs. Eddy.

The proposal was therefore made to Mr. Farlow that *The Herald's* representative be allowed to visit Pleasant View under the guidance of one of the secretaries, go over the house and grounds during Mrs. Eddy's absence on her drives, and, if possible, obtain a glimpse of Mrs. Eddy as she entered or left the carriage.

All during the month of April this request was held in abeyance, and finally it was conditionally denied. The time was not favorable, the secretaries declared, and if a more opportune time did present itself later the request might be granted. Not until the close of May was the matter brought up again, when a reconsideration of certain flippant reports about Mrs. Eddy, and the incomplete and unsatisfactory descriptions of her which had heretofore appeared in print, renewed the interest in *The Herald's* proposed interview on the part of the Publication Committee, while it also increased my own determination in the matter.

When *The Herald's* representative asserted the intention of going to Concord, and seeking what information was obtainable, finding what welcome there might be, the manager of the Publication Committee wrote letters to the secretaries at Pleasant View, and gave the writer of this story a letter of introduction, begging the courtesies of the house and all that the time might warrant, but not including a request for an interview with Mrs. Eddy. With this the writer had to be content.

I have stated the full particulars of these proceedings to show with what jealous care Mrs. Eddy's representatives guard her seclusion, and I now feel that this jealous care is warrantable, and that, even in the face of misunderstandings and false accusations, these representatives do well in so performing their duty and standing to their guns, as it were, in the face of suspicions of unworthy motives. The life of Mrs. Eddy is very precious to the Christian Science Church.

PLEASANT VIEW BUILDINGS AND GROUNDS.

The trip to Concord, N. H., from Boston is a pleasant one. The two hours' ride up the valley of the Merrimac river, through the low hills which are as the foothills of the White Mountains, carries one through a rugged farming country and many factory towns to the sober little capital city, with its wide, shaded streets, old-fashioned homes, and many churches. The city lies, as it were, in a basin, the rim of which is encircling hills. Old elm-trees make roofs of green over the streets, and there is a quiet, sleepy atmosphere about the town.

The public buildings are grouped together in the centre of the city, the capitol, the state library, the postoffice, and the city building, with six or eight churches grouped around them. Most of the buildings are of New Hampshire granite, and none are more beautiful than the Christian Science church, which was the gift of Mrs. Eddy to her followers in Concord. This building is built of the virgin stone of a freshly opened quarry, and it is almost as fair as marble in color. It has a great tower, which is plain and four-faced, and recedes from its broad base to a lofty belfry, in which are placed tubular chimes on which old hymns are rung out to the city every Sunday morning.

I arrived in the city Saturday afternoon, and was driven almost immediately out Pleasant Street, past the State Asylum, with its beautiful grounds, past the Odd Fellows'

Home, past numerous handsome private homes, until, perhaps a mile from the centre of the city, I reached the grounds of Pleasant View.

The place is to the south and west of the city. One hundred acres slope from the hill road down to the blue river. There is a low granite curbing, surmounted by an ornamental iron fencing. The grounds are laid off like a park, with very careful landscape gardening. There is a sweep of lawn, in the centre of which stands the modest three-storied frame cottage, with its balconies, verandas, and tower effects, giving large window views to the chambers.

There is an ornamental fountain in the foreground, and a circular drive sweeps up to the door from a granite gateway, in which is set a little iron wicket. Beyond the house the lawn slopes to the river, and in various parts of the grounds are large beds of tulips, pansies, hyacinths. Beyond the garden are orchards, which were in full flower at the time of the visit.

From the house a pathway leads toward a miniature lake, on which is built an ornamental boat-house, and here is kept the small skiff in which Mrs. Eddy has sometimes enjoyed drifting about this placid little body of water. The view across the river is beautiful from the windows of Mrs. Eddy's room, and, in fact, from all the rooms on that side of the house. Monadnock rears its purple head some miles away, and directly opposite are the hills of Mrs. Eddy's birthplace.

MR. FRYE, THE FIRST SECRETARY.

I dismissed my carriage at the gate and walked across the pebbly walk to the vestibuled entrance, over which are stained-glass windows, which give a brightly ornamental effect in the pale green color-scheme of the house. My ring was answered by an elderly lady, who greeted me with a smile, and took my card and letter of introduction to Calvin A. Frye, who is Mrs. Eddy's first secretary. She admitted me and directed me to the parlor, where she left me.

I have spoken of the modest dimensions of the house, but the double parlors, which occupy the eastern half of it on the ground floor, are so arranged as to give an effect of stateliness. They are hung in rose-pink silk brocade, carpeted with white velvet, and curtained with filmy lace at the windows. They are full of sunlight, and contain several handsome paintings, one of which is a three-quarters length portrait of Mrs. Eddy, representing her as standing in the pulpit of her church in Boston.

I had but a moment to observe the exquisite daintiness of the rooms, when Mr. Frye came down stairs and invited me into the library, across the hall. This is a small, square room, full of books shut up behind glass doors, with several handsome steel engravings hanging over the cases. The furniture is of leather upholstery, and it is a comfortable, livable, old-fashioned sort of room. Mr. Frye seated himself opposite me, and looked at me thoughtfully for some minutes without speaking. Then he said:—

"I don't want to seem inhospitable to you after your making this trip to Concord, but I cannot do more for you than to let you see our living-rooms, and talk to you for a few minutes. I am busy every day with important work with Mrs. Eddy, and she, of course, cannot be disturbed."

I looked at Mr. Frye in turn, and also remained silent for some time. He is a man of clerical appearance, with hair slightly tinged with gray. He was distinctly disturbed, and perhaps a little annoyed by my visit. He seemed about to frustrate the work of three months by interposing his personal refusal to my quest.

"I want to see the house and the grounds, certainly; all of your home that you can conveniently show me," I replied. "But I also want to see Mrs. Eddy."

"I am not able to command Mrs. Eddy's time. I have told her of your request, and she has not seen fit to grant you an audience," said Mr. Frye. "She is engaged, and does not care to be interrupted."

"Is she engaged with the affairs of the Christian Science Church?"

"She is at present engaged on her own personal affairs, and her secretaries are at work assisting her."

"It was not my intention to inquire as to the exact nature of her business at this moment," I explained. "I merely wished to suggest that the affair upon which I come is of relative importance. I am willing to wait in Concord until such time as Mrs. Eddy will be at leisure to see me. If Mrs. Eddy is ill I will not wait; if Mrs. Eddy is not ill I shall wait with what patience I can find, knowing that you will eventually understand that my business is serious."

Mr. Frye reflected. Presently he said: "As I have told you, I cannot persuade Mrs. Eddy to do anything which she does not wish to do. I will tell her what you say. In the mean time I will have you shown about the place, and I will send you word what Mrs. Eddy decides. I hope the news will be favorable."

At this moment an electric bell rang in the rooms above, and some one came to summon Mr. Frye. I heard a pleasant voice speaking with him, and then the doors closed, and I was left alone to inspect the library if I desired.

After I had looked at two most interesting pictures, the one "Christ or Diana?" the other "Daniel in the Den of Lions," another lady came to me, a lady whom I afterward found was Mrs. Laura E. Sargent. She had a very pleasant face, and she looked at me with a slightly quizzical smile, as though she were in a mood to tease me about the persistence of all news writers. But she said:—

"If you will come with me I will introduce you to our steward, and he will show you about the grounds and stables."

We passed through the dining-room and kitchen, giving me the opportunity to see that, to the last corner of this house, order, simplicity, and absolute daintiness prevailed. The steward, August Mann, was waiting for us, and he took me in charge.

"Show her all about, everything she wishes to see," said Mrs. Sargent, kindly, and Mr. Mann smiled on me in a large, wholesome way,—a smile to dispel the doubts of a Thomas, for he has an open, friendly countenance.

TOUR MADE WITH THE STEWARD.

The stables include a carriage house, horse stables, and cow barns. I was first shown the carriages. Mrs. Eddy's rockaway had just been washed after her daily outing, and I was permitted to sit in it to see how comfortable it was. It is a coupe, hung on especially easy riding springs. It is upholstered in dark green, has silver-mounted lamps, and bears Mrs. Eddy's monogram on the door.

Mrs. Eddy's parasol and a light wrap still lay on the seat. There was a lavender silk knitted handkerchief-bag hanging from the card-case in the front of the carriage, a little clock fixed in the centre of this case, and two crystal bottles set in the wall pockets. These small bottles may have been intended by the makers of the carriage for smelling-salts, perfume, or tiny confectionery, but when I saw them they were empty, and appeared to be merely ornamental fixtures.

The seat of the carriage was especially comfortable, being upholstered with air cushions, and providing a most luxurious and easy resting-place for the back.

"Do you think you could enjoy that in comfort for a long ride?" asked Mr. Mann.

There were several other carriages in the different rooms, an old rockaway which is used on runners in the winter time, but which is far from being a shabby vehicle; a large double-seated surrey for the use of the family, a small run-about, and a top buggy.

On the door leading to the stables there is printed: "Always speak to the horses before entering the stalls."

We entered the stalls, and Mr. Mann duly spoke to each animal, calling each by name. Dolly and Princess are Mrs. Eddy's own carriage horses. They are large, fine-looking

animals of seal brown color, but not of any particularly blooded stock. There are two other horses,—Jerry and Bess, I believe,—just ordinary well-fed creatures.

But down at the cow barns we saw two of the daintiest little Jersey heifers that ever browsed on tender grass. They looked like little deer in color and shapeliness, and in beauty of eyes, and came at the call of the steward as though they were great pets.

After fondling the wet noses of the little cows we went up to the greenhouse, and looked at the plants which are being prepared for the gardens, looked at the hotbeds of salads and early garden truck, and then came up across the lawn, which had attained a plushy softness, to investigate a century plant, with its long blue swordlike leaves.

Two or three men were at work grubbing out dandelions from the lawn, and caring for the turf edges of the walks. I had seen two men in the stables, and judge there were several men servants employed about the place. Its careful gardening shows the effects of their work, for the whole place is kept with exquisite care. At a small summer-house in the grounds we stopped, and the steward invited me to pick all the pansies I wanted. Mr. Frye came down to me there, and told the steward to send the carriage to the door to drive me back to the hotel.

"Mrs. Eddy will send you word to-morrow when you may come to see her," he said, and shook me cordially by the hand.

A MESSAGE COMES FROM MRS. EDDY.

On Sunday morning I attended service in First Church of Christ, Scientist, in Concord, and after the services, which are unusually brief to one used to a long ritualistic service, I went for a stroll, not yet having received any message.

I was walking in a general way in the direction of Pleasant View, when I saw Mr. Mann driving toward me. He drew up at the curb, and said he was coming to fetch me. Mrs. Eddy had decided to see me for a few minutes at one o'clock. We drove back to the little villa, and this time, as I walked up the driveway, I heard the piano, which some one was playing on softly, and just before my ring a ripple of laughter.

All the foolish fears of a great secret at Pleasant View suddenly dropped from me like a hateful cloak. I perceived the beauty of a happy home life, being lived naturally and agreeably here in this well-ordered, well-kept country residence.

The housekeeper answered my ring on this occasion, and said she would take my card to Mrs. Eddy. I went to the parlor, and there met Mrs. Sargent again, and a young man, an under secretary, who has recently gone to Pleasant View. It was he who had been striking the piano keys.

The maid came back to fetch me, and said: "Mrs. Eddy will see you now."

"You are going up with me, are you not?" I asked Mrs. Sargent.

"I will go to the door with you, if you wish it," she replied. "But Mrs. Eddy wishes to see you alone."

"And may I talk with her?"

"Certainly. That is what you are here for," smiled Mrs. Sargent again, with her bit of quizzical playfulness.

We went up-stairs to Mrs. Eddy's study, which is in the tower room with the balcony running around the window. Mrs. Sargent left me at the door, and, to my surprise, closed the door after her as she left me. I saw a lady with white hair standing in the window with her back to me. She stood there quietly for a few seconds, and then turned and came toward me. She held out her hand cordially and spoke my name.

She was the rarefied image of that painting in the room below which I had studied so carefully, and every feature was the feature of the photograph which all the world is familiar with as the picture of the Founder of Christian Science. She wore a gown of black silk, with a piece of

rare old lace arranged in fichu fashion about her neck. Her hair was perfectly white, and rippled softly away from her face. Her skin had the delicate bloom of a dear old lady's, and, though it was fine and almost transparent, it was in no way artificially touched. The hand which she gave me in greeting was very small and well formed. In stature she must be about five feet, five inches.

"All this fuss to see poor little me," said Mrs. Eddy, looking at me with radiant eyes, and smiling upon me benignantly.

"I feel greatly honored at the privilege granted."

"But why should you, my dear child? Why do so many people wish to see me?"

I could not answer. I felt some way overwhelmed.

"All that I ask of the world now," continued Mrs. Eddy, in a voice which had the sweetness of a silver chime about it, "is that it grant me time, time to assimilate myself to God."

Again I was silent, for there was force and decision in every word so gently uttered. The force was like a command from a mind accustomed to be obeyed.

"Are you satisfied, now that you have met me personally, and now that I have acceded to all your requests?"

"I am satisfied," I replied.

"I would that I could satisfy every one who wishes to see me," went on Mrs. Eddy. "I would that I could entertain them all, take them all to my heart. But I cannot do it. I can only say to those who cherish this ambition, 'Look on Truth and forget my personality.' All that I ask of the world is time."

I lifted Mrs. Eddy's delicate hand to my lips, and bowed in assent to her apparent desire to terminate the interview. She touched my forehead with her fingers, and lifted her hand as though to bless me as I withdrew from the room. My last glimpse of her was as she stood there, erect as youth, dominating in expression, and yet gentle, flowerlike, and very lovable. Her last gesture was a wave of her up-lifted hand.

TREASURES IN THE HOUSE.

Mr. Frye was waiting down the hall for me, and he took me to the parlor. There I met the assembled family, Mrs. Pamela J. Leonard, of New York, Mrs. Sargent, and the assistant secretary. Mrs. Eddy had asked them to show me certain of the treasures in the house, and they were waiting to carry out her wishes.

Among these was the gold scroll on which was inscribed the invitation from The Mother Church in Boston for Mrs. Eddy to visit and accept the edifice as a testimonial from the loving hands of four thousand members. This scroll rests in a case upon a table which is covered by a silk embroidered cover, brought from Pekin by Mrs. Conger, wife of the former minister to China, who, as is well known, is a devout Christian Scientist, and who practised her faith among the frightened prisoners at the siege of Pekin during the uprising of the Boxers.

Under this table is a large rug of ostrich tips sent from South America. On another table lies a copy of "Bohemia," done in white vellum, beautifully printed and illuminated, being the second impress of an imperial edition of fifty copies of this work, this number being especially printed for Mrs. Eddy. There is a large tapestry painting on one of the walls, of Jesus as the Good Shepherd, with the inscription, "His banner over me is Love." Another painting which is particularly prized by Mrs. Eddy, having been given her by a student, is "The Angel of the Resurrection."

On the table in the back parlor lie the two silver trowels which were used in laying the corner-stones of the churches of Concord and Boston. The trowel used for the Concord church was given Mrs. Eddy by Lady Victoria Murray, daughter of Lord Dunmore.

In the library is a loving-cup presented by the Executive Members of the Boston Church. This is a beautifully em-

bossed silver urn, in the rim of which are set twelve large pearls. There are also some miniatures in this room of great value and beauty. There are portraits of King Edward and Queen Alexandra of England, and paintings of "The Madonna and Child," and "The Holy Family," done by a pupil of Raphael, and presented to Mrs. Eddy by Lord Abinger. His crest is on the back of the frames, and under this is written, "From Abinger, an admirer, to the Rev. Mary Baker Eddy."

On the wall hangs a Persian rug which was wrought for an empress, and which is valued at \$5,000; but no one could quite tell its history. The rug was woven by hand, and required eighteen years in the making. There was an old Bible in this room printed in 1551, and a quaint old clock which seemed to have a history hid away somewhere. There is also a beautiful old clock in the hall, whose silver chimes ring out the quarter hours. It was presented by her Church. Of its kind there are but few in existence.

DAILY LIFE AT "PLEASANT VIEW."

We walked for a few minutes on the rear veranda, while Mrs. Sargent related something of the daily life at "Pleasant View."

"Mrs. Eddy is an early riser," she said. "She has all her meals with great punctuality, coming down stairs for most of them. She is not faddish about her food in any way, has never given up the eating of meat, nor in any way does she show a peculiarity about what she takes for nourishment, though, of course, she has always been very moderate in her appetite. She would like to take more exercise than she does, but there is little seclusion for us in these grounds, as you can see. She can walk here on the veranda, and she takes her daily ride, which is always an hour in length.

"She loves order and regularity above all things, and she likes to have the household affairs move with precision. She also likes to have a family around her, as you see. She sometimes throws aside all other work and writes poetry. Her writing is excellent, and she punctuates each sentence with great care.

"She takes a personal interest in her daily mail, which is voluminous. She answers a great many letters entirely in her own writing, writing rapidly and apparently without effort; but a large number of letters are disposed of by dictation to her secretaries.

"She superintends all the business which is carried on here, supervising all business of her secretaries. Sometimes she spends long periods in contemplation, and she likes to look across the river there to Bow Hill, where she was born. She told a member of the household the other day that she knew every bit of that territory over there, and that she could see seven counties from her window.

"Our life here is very simple, though quite busy. But it is a life consecrated to God, and every day seems to bring a renewed blessing from association with this beautiful life of Mrs. Eddy. She is always gentle, always self-effacing, and only interested in the living of a holy life. We who are spending our days at 'Pleasant View' have the opportunity of growing wonderfully in the tenets of the Christian Science faith."

The carriage was brought around to the door again, and I was driven back to the hotel. The personal interview with Mrs. Eddy has been faithfully described. I left with her secretaries the outline of an interview which Mrs. Eddy agreed to look over at her leisure, and dictate the replies. This included questions which would involve too long a conversation to be held at one time. The questions were later considered, and given to *The Herald* with Mrs. Eddy's comments, as follows:—

QUESTIONS ANSWERED BY MRS. EDDY.

Is Christian Science a new religion? Yes, a new old religion and Christianity.

Does it stand in relation to Christianity as Christianity did to Judaism? Somewhat.

Are you, Mrs. Eddy, an interpreter of Jesus' teaching, or have you presented that which is new to his teaching? An interpreter thereof.

Is the text-book of Christian Science the Word of God in the same sense as the Bible is? All Truth is of God, and Christian Science is eternal Truth, demonstrable, based on fixed Principle and rules susceptible of proof.

Is "Science and Health with Key to the Scriptures" a fulfilment of the New Testament promises of a latter-day revelation? It is.

Is Christian Science in antagonism to natural science? No, not to natural Spiritual Science. There is no material Science.

Does it (Christian Science) discourage the study of it, or any portion of it? It is gained by study and rightness.

Does it (Christian Science) discourage the study of anatomy, physiology, and hygiene? Not of spiritual hygiene.

Does it (Christian Science) deny the existence of disease germs, or merely assert man's superiority over such forces? Denies the existence thereof.

Does Christian Science expect its followers to live immediately as though entirely spiritualized beings? No.

Is it proper for the Christian Scientist to disregard the laws of hygiene, or merely to disregard them if circumstances make it necessary? To disregard all that denies the Allness of God, Spirit, and His laws.

May the Christian Scientist make use of physical culture, use especially nutritive foods, or make use of the fresh-air treatment as aids to physical well-being? No, not necessarily.

Under any conceivable circumstances would the Christian Scientist make use of surgery? Yes, and no.

In case of infectious disease would the Christian Scientist yield himself to the customary treatment of isolation and disinfection? If the law demands it, yes.

Does Christian Science regard poverty as a manifestation of disease? No.

Is poverty a disease of society or the individual? Of both.

Can the individual, by use of Christian Science, overcome worldly defeat? Yes.

Is there a doctrine taught by Christian Science that evil can be willed against another as well as good? This doctrine is Hypnotism. Christian Science can only produce good effects.

Has an evil mind power against a spiritual life? Evil works against all good, if it works at all.

Do you regard death as the great world fear which the human race wills against itself? Yes.

If the world would abandon the study of disease and crime, and devote itself to the study of wealth, health, and love, would criminals, cripples, and poverty cease to exist? They would.

Does Christian Science advocate the abolishment of philanthropic institutions as well as hospitals? No.

Could society exist without jails and almshouses? Not at present.

Nota Bene.

MISS WILBUR's courteous and correct explanation of the so-called secret of my isolation from the world leaves one feature, and the main one, to be mentioned.

My seclusion is not at all on account of my age, but solely from lack of time in which to accomplish what I do for humanity, and have the moments left in which to regale myself with the sweet intercourse of society.

My first and forever message is one and eternal, and I shall reiterate it this year, *next year*, and so forth.

MARY BAKER EDDY.

Pleasant View, Concord, N. H., June 16, 1905.

Selected Articles.

A Canadian jury has brought in a verdict of criminal conspiracy against four Christian Scientists who conspired to deprive one William Goodfellow of "the necessities of life, to wit: proper medicine and nursing, whereby death was caused."

Let us see. Fifteen years ago a doctor and a wife who should deprive the husband of shelter from the night air would have been held guilty of conspiracy to deprive him of one of the necessities of life, because nothing is more deadly than the night air. In the year of grace 1905 a doctor and a wife who keeps the invalid indoors where the air can't reach him at night is similarly held guilty of criminal conspiracy to deprive him of one of the necessities of life.

Yesterday the night air was not only not a necessary of life, but was positively deadly. To-day, or to-night, rather, the night air is not only harmless, it is positively life-giving; so that consumptives are made to sleep in the open air. It is necessary to save them.

So of medicine. Yesterday blue mass in large masses was one of the necessities of life. To-day nobody needs blue mass. Yesterday X-rays were necessary to save patients suffering from some diseases. To-day the word is, beware of X-rays. It is a wise jury that brings in anything but a Scotch verdict. What is the test? The wisdom of yesterday, or that of to-day? But what of the morrow?

Of course no sensible man will condemn science, but before being sworn on the jury every such man should make sure what science is to guide him—the science of to-day, or yesterday, or to-morrow, or Christian Science.

St. Louis Post-Dispatch.

When Copernicus departed from the old lines in astronomy, and began to regard the heavenly bodies from the standpoint of the sun as the centre of the solar system, the practical results which he obtained were an evidence that he had found the right basis from which to calculate in astronomy. The results stood as proof that the starting-point was correct. In like manner Christian Scientists contend that the practical results or fruits of Christian Science teaching and practice establish the proof that they have found the right basis from which to work out righteousness and health.

Those who have studied the workings of Christian Science in their entirety see therein a spiritual movement making for the well-being of society. No description is adequate which does not recognize the fact that Christian Science transforms the lives of men and women. From every quarter comes the story of pride, obstinacy, selfishness, anger, jealousy, and fear destroyed. Drunkenness, profanity, and sensuality are overcome. Business is conducted upon a more honorable basis, feuds are broken up, children are reared in an atmosphere of greater harmony and love, while husbands, wives, and neighbors are re-united. Christian Scientists testify that, great as has been the physical healing which many of them have received, it is the smallest part of their gain.

The world is welcoming the fruits, and it will also accept the premise from which these fruits are logically derived. In the face of facts, mere personal or theoretical objections are of no avail and need revision.

REV. CHARLES D. REYNOLDS.
Granite State News.

Christ was the first Scientist to preach and practise healing without medicines, and the first healer to give absent treatment. His reiterated injunction to the disciples was to heal bodies as well as save souls. "He gave them power . . . to heal all manner of sickness and disease," and he explicitly instructed them to "Heal the sick, . . . raise the dead, cast out devils." His first act, after announcing his mission in the Sermon on the Mount, was to cleanse a leper

by a touch of the hand. Then he gave the first example of absent treatment. A captain in the Roman legion said, "My servant lieth at home sick of the palsy, grievously tormented." Christ replied, "I will come and heal him." The Roman courteously protested, saying: I am not worthy to receive you in my house, nor is your visit necessary. I say to my soldiers, Go! and they obey me. "Speak the word only, and my servant shall be healed." Christ was surprised at this apt faith, and answered, "As thou hast believed, so be it done." "His servant," added Matthew, "was healed in the selfsame hour." They who do not credit such so-called miracles do not believe the Christian religion. Mrs. Eddy has invented no new thing; she has simply summoned Christians to return to the original teachings and practices of Christ.—*Town Topics.*

Many of the best thinkers of the day are turning to Christian Science, and it numbers among its adherents tens of thousands of men and women in every walk of life. Its growth has been phenomenal. Its work for humanity is far-reaching, and one cannot afford to lightly criticise a religion that numbers among its followers men of high literary, social, diplomatic, theological, educational, medicinal, scientific, and religious standing.

It is no "fad." Life-long invalids—chronic, nervous, mental, organic, and every known disease to which flesh is heir—have been cured, drunkards reformed, morphine fiends lifted out of despair, sinners reformed, and one is most ignorant of facts, and misjudgingly or intentionally deceives the public and himself, who does not recognize the good that is being done by this great truth of the ages.

Editorial in *Wyandotte (Mich.) Record.*

The fundamental teaching of Christian Science that God is All in all, is Scriptural; hence all that really exists is God and His infinite manifestation. This Scriptural view exalts one's idea of God far above the former sense of Him, and enables one to contemplate infinity. From this elevated point of view he clearly perceives that the belief of evil as entity involves the limitation of God as infinite good. Therefore, the manifest phenomenon of evil, known as sin, sickness, disease, and death, must be seen for just what it is; namely, the belief in something apart from the infinite, the belief that there is something opposite and contrary to God, notwithstanding the Scripture declaration that God is All in all.

JAMES D. SHERWOOD.
El Paso (Tex.) Herald.

The establishment of Christian Science in the household does not lessen the loving parental care, or produce indifference or neglect of home responsibilities; but, on the contrary, increases that affection, consideration, and watchfulness which has heretofore been present by removing many of the needless fears and anxieties through giving an understanding trust in the present power of that ever-loving heavenly Father, of whom the Psalmist wrote, "Because thou hast made the Lord, . . . thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

DAVID B. OGDEN.
Oregon Mist.

Glasgow entertains many quaint sects of believers, but only within the past year has it been invaded by the devotees of the religion familiarly known in America as Christian Science. Although branches of The Mother Church in America have existed for some time in the principal towns of England, and there is a branch in Edinburgh, it was only about nine months ago that the first Glasgow meeting of Christian Scientists was held. It numbered but one or two. Now every week a gathering of between thirty and forty may be seen on Sunday morning at their place of meeting in the Masonic Halls, West Regent Street.

Glasgow (Scotland) Record.

From the Field.

A Victory in Colorado.

The Christian Scientists of Colorado are grateful over the outcome of the agitation for medical legislation which has been before the State legislature for several successive sessions. The new medical law enacted by the recent legislature, and signed by Gov. Jesse F. McDonald, contains the following clause, exempting Christian Scientists from the examination prescribed by the measure: "Nothing in this act shall be construed to prohibit the practice of the religious tenets, or general beliefs of any church whatsoever, not prescribing medicine or administering drugs."

The insertion of this clause is clearly indicative of the growth of a more friendly attitude of public sentiment toward Christian Science in the Centennial State in the past two years. In 1901 a medical bill adverse to Christian Science passed the legislature with scarce a dissenting vote, but was vetoed by Gov. Charles S. Thomas. A similar bill passed the legislature in 1903, but met a like fate at the hands of Gov. James A. Peabody, on the ground that the measure was in violation of the bill of rights of the State constitution.

We recognize in this victory the guiding hand of the Father of whom the Psalmist said, "Behold, he that keepeth Israel shall neither slumber nor sleep." A higher step in the emancipation of the race has been won. Our faith in the loving protection of divine Principle has been more firmly established, and our gratitude goes out to our beloved Leader, who has led us thus to prove our right to freedom as sons and daughters of God.—EZRA W. PALMER.

Legislation in North Dakota.

In their legislative work this year, the medical fraternity did not slight North Dakota. At two previous successive sessions a bill was presented, containing a clause to which the Scientists objected on the ground that it might be construed to exclude Christian Science practice. In 1901 the bill was defeated; in 1903 it was "indefinitely postponed," and at the late session of 1905, through the persistent work of the Christian Scientists, who are specially indebted to Senator J. D. Bacon for his personal interest, this third attempt was frustrated. The bill provided for a certain course of study and an examination before a Medical Board authorized to issue certificates or licenses, before beginning the practice of medicine. The physician introducing the bill, and his friends, insisted there was nothing in it that was meant to affect, or that would affect, Christian Scientists, yet they refused to insert the word "medical" before the word "physician," or to make it read "a physician using material remedies, drugs, and surgical appliances." Then an amendment was offered to the effect that the law should not apply to Christian Scientists. The vote on amendment was a tie, and President Bartlett voted for the first time during his office as president of the Senate for two sessions, casting his vote in favor of the amendment. And now, the physicians, who claimed they were not after Scientists, worked with might and defeated the bill as amended. Recalling it, they threw out the entire definition of medicine, and it passed; being practically similar to the one already upon the statutes. This leaves open the opportunity for a definition of the practice of medicine at the next session, convening in 1907. But the chances are narrowing. The people are awakening to the fact that not only is this an attempt to prohibit Christian Science healing, but that it will deny to all citizens the privilege of employing any cure save that of *materia medica*.

J. W. THOMPSON, Publication Committee for No. Dak.

The Lectures.

Los Angeles, Cal.

Between three and four thousand people filled the Temple Auditorium, April 25, to listen to a lecture on Christian Science delivered by Edward A. Kimball of Chicago. The lecturer was introduced by Judge John D. Works, formerly of the Supreme Court of California, who spoke in part as follows:—

My Friends:—All good people are, or should be, endeavoring to better the condition of the human race, spiritually and physically. This endeavor involves a continued and unrelenting warfare of good against evil, of truth against error, in all its forms. Millions of dollars are expended every year, in this country alone, in this humane and beneficent effort. The various Church organizations are regarded as the most fitting, the most potent instruments for the elevation and regeneration of man, spiritually. But thoughtful people are beginning to inquire whether this is the whole duty of the Church. Christian Scientists believe and teach that it is not. Jesus not only preached the gospel to the poor, but healed the sick and all manner of diseases. He commanded his disciples not only to "Preach, saying, The kingdom of heaven is at hand," but to heal the sick.

We believe that the command to heal the sick was as binding and imperative as the command to preach. We believe that a Church that only preaches the gospel, is not doing its whole duty to God or man. We believe that sickness and disease are evils to be overcome, the same as sin, and that they are healed by the same power, as Jesus demonstrated over and over again. We believe that one of the most practical and efficient means of regeneration from sin is to heal from sickness and disease, of mind and body, and make man healthy and happy. And these beliefs are no longer confined to Christian Scientists. Even the old Churches are beginning to say, as one of the foremost preachers of Los Angeles said to me, only a short time ago, "Why cannot the work of physical healing be done in the old Churches? Why was it necessary to organize a new Church for that purpose?" The answer is simple enough. It is because the old Churches have failed in that sacred duty, and it was left for Mrs. Eddy, the Founder and Leader of Christian Science, to revive the teaching of Jesus in its fulness, and demonstrate to the world that God's arm is not shortened since Jesus' time, but that physical disease can and will be healed by divine power now as it was then, if we pray not amiss.

Religious thought is being stirred to its depths on this subject, so important to humanity. So strongly has the duty of healing been impressed on the minds of men, as the result of the teachings of Mrs. Eddy, and the practice of Christian Science, that the great Established Church of England has commenced to form "health guilds," so-called, for the purpose of physical healing. Surely the good people by whom Christian Science was scoffed at and ridiculed, only a few years ago, are learning wisdom.

To-day the teachings and practice of Christian Science are challenging the respectful and kindly attention of all broad-minded, intelligent people, in the other Churches and out of them, and the Church is growing with a rapidity that is the wonder of all careful observers. It has enrolled in its membership thousands who have, through its influence, been brought up from the degradation of sinful habits, disease, discontent, and unhappiness to be moral, upright, healthy, and happy people. It is bringing about a religious revolution which is making the Bible an inspiration and help never realized before.—*Correspondence.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

To My Church.

Dearly Beloved:—I request that every member of The Mother Church in Boston pray each day for the amicable settlement of the war between Russia and Japan; and that God bless this great nation, and those islands of the sea, with peace and prosperity.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., June 13, 1905.

To the Executive Members.

Committee of Executive Members of The Mother Church.
Beloved Brethren:—In response to your greeting, I thank you. I rejoice with you. I love you. Have one Mind, and love thy neighbor as thyself.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., June 10, 1905.

The Readers of The Mother Church.

THE newly elected Readers of The Mother Church for the ensuing term of three years are:—

First Reader, MR. WILLIAM D. McCrackan, M.A., C.S.B.

Second Reader, MRS. LAURA CAREY CONANT.

Mr. McCrackan is a graduate of St. Paul's School, Concord, N. H., and of Trinity College, Hartford, Conn. He is the author of several works on history and travel, and for a number of years was a lecturer on these subjects in various cities, especially in New York City, for the Board of Education. He is a graduate of the Massachusetts Metaphysical College in Boston, and for three years served as Publication Committee for the State of New York. He has been a member of the Board of Lectureship during the past year.

Mrs. Conant received her early education in New Jersey. For three years she was a teacher of literature and oratory in the Burrit Institute, Baton Rouge, La. Later she taught for a like period in Pensacola, Fla., in which place she became interested in Christian Science through the healing of her sister. After coming to Boston, she continued the study of oratory under the instruction of Dr. Charles Wesley Emerson, of the Emerson College of Oratory, from which institution she graduated in 1893, and for the next three years she gave public readings and taught oratory.

Both the Readers have been practitioners of Christian Science for a number of years, and are spiritually qualified for their new duties.

"The bread of life."

THE Communion of The Mother Church is over, so far as the outward event is concerned, but the wave of spiritual aspiration awakened by this simple, yet profoundly impressive service will go out into human consciousness, and circle the globe with a message of peace and good-will, of "faith, hope, and charity." The lesson for the members seemed to be this,—that he who would enter into the "holy place," must enter by the door of righteousness, while "the

holiest of all" can only be reached through love,—love for God, and for our fellow-man.

All questions as to how people are to be drawn to the church and interested while there, were clearly answered for every unprejudiced thinker who attended The Mother Church last Sunday. In spite of the fact that many had to stand during the entire service, the closest attention was given throughout, and the blending of the voices in the Lord's Prayer and in the singing witnessed to the depth and intensity of feeling experienced by all who were present. No one need wonder that the members of this Church should be stirred to the depths of their being on such an occasion. It is no light thing for one who had been an hungry and athirst in the desert of mortal existence, perchance sick and hopeless, to find the doors of the Father's house opened wide by Christian Science, the blessed revelation of Truth, to learn what it means to partake of the "bread which cometh down from heaven and giveth life unto the world," and of which Jesus said, "If any man eat of this bread, he shall live forever." "Live," said he; not merely exist in the dream of materiality, but be awake to divine reality; "live forever" in gaining with each passing hour a higher, holier, clearer sense of the divine purpose which would be unfulfilled did man not know that he lives because God is his Life.

While loving thoughts went out to our brethren in many lands, our tenderest thoughts accompanied the loyal greeting sent to our revered Leader, whose faithfulness to her high calling may well command the respect of all true Christians.

At our Communion we come together to gain a clearer realization of the life-sustaining power of Truth, and to return thanks for all it is to us from day to day. None can have gone away unfed from this spiritual feast, and like the disciples, we all may pray, "Lord, evermore give us this bread."

ANNIE M. KNOTT.

The Communion Service.

THE annual Communion service of The Mother Church was held in its edifice, June 11. No special arrangements had been made for visiting Scientists, except that one extra service was held. The services were conducted in the usual manner. Edward A. Kimball of Chicago read the following dispatch, which was unanimously endorsed by a rising vote and forwarded to our Leader.

Boston, Mass., June 11, 1905.

Rev. Mary Baker G. Eddy.

Pleasant View, Concord, N. H.

Pastor Emeritus of The First Church of Christ, Scientist, in Boston. Beloved Teacher and Leader:—At this fateful time, when the nations wage murderous war; when the inordinate greed and contentions of society threaten the peace of mankind, and when sin and disease are rampant, we, the members of The Mother Church, with a sacred hope and purpose, have assembled together in His name to commune with our heavenly Father, to consecrate ourselves anew to the service of God, and to pray that we may receive more of the divine Spirit which alone will save the world from sin and strife. We glory in every good thing that has been accomplished through Christianity and the Christian churches for the overthrow of evil, and for the reign of Christ on earth; but we especially rejoice that, through Christian Science, the full, saving efficacy of true Christianity has not only been discovered, but is actually releasing mortals from the enthrallment of disease as well as sin.

Since the day when you first published Christian Science to the world, and asserted the sufficiency of salvation from every ill through our divine Saviour, thousands of weary travelers on earth, struggling against unspeakable adversity, have learned that they can indeed do all things through Christ, and that in the crusade against sickness

they may be victors instead of victims. Christian Science is dispelling the mysteries which unenlightened centuries have devised and imposed upon the race. It supplants the superstition, ignorance, and sin which have made helpless cowards of mankind. It discloses the naturalness of man's dominion over evil, and tenderly reconciles mortals to the abandonment of sin. In revealing the supremacy of Spirit it reveals also the rule which makes that supremacy available. It declares the law of God to be the law of life and health, which abolishes the law of sin and death. It arouses the hope of the despairing, fulfils its promise to the sick, and subdues the torment of fear. For a generation it has thus ministered to the broken-hearted, the sinful, and the sick; and now a million people, radiant with the glow of a new-found peace, proclaim that through its means they have been rescued from the extremes of woe. Not all the enmity of sinuous evil can stay the penitential tears, nor stifle the gratitude of these people. The tongue of slander, of bigotry, and falsehood will plead in vain with them to waver in their supreme devotion to our good God and His irresistible Christ, and to the Christianity which promises to heal and does heal.

To you, the wise, patient Teacher and Leader; to you, the tender, compassionate friend; to you, who have stood as the lone sentinel stands through long, dark nights when storms beat and threaten, we send this simple tribute of our enduring love. Your unceasing labor for humanity, your honesty, your many sacrifices, your fidelity to a sacred trust, the ever-growing kindness of your ministry, the innocent rectitude of your daily living,—all these things and more have endeared you to us and gently compel our gratitude, our friendship, and our affection. Divine love alone can compensate the minister of God who entreates the world to turn from sinful living and yield to the Mind which was in Christ. The ruthless sting which humanity bestows on the prophet of God is a warning to him that the things of earth afford no heavenly reward, and that his consolation must be from on high. But as the modest flower may brighten the pathway of him who climbs the mountain's steep ascent, so may the offering of our cherished esteem comfort you on your heavenly way, and be some small recompense for your loving service to mankind.

WILLIAM B. JOHNSON, *Clerk*.

The subject of the Lesson-Sermon, especially prepared for the occasion, was, "All things whatsoever ye would that men should do to you, do ye." In extending to all a loving invitation to unite in silent, spiritual communion with our heavenly Father-Mother, God, the First Reader appropriately quoted from Science and Health, page 35, lines 19 to 29, and said, "I now invite all present to kneel with us and partake of this spiritual sacrament." After a deeply impressive silence the kneeling worshipers united in the audible repetition of the Lord's Prayer, which closed this solemn and sacred communion.

The three services were well attended, many being obliged to stand, and the reverential and profound interest manifested by all was another proof of the power of Truth in its appeal through Christian Science. The day was fine, and gave all present an opportunity to survey the new edifice, and "tell the towers thereof," while the thought of future worship therein, with the brethren from all the fields, gladdened every heart.

The Annual Meeting of The Mother Church.

THE Annual Meeting of the members of The First Church of Christ, Scientist, was held in The Mother Church on Tuesday afternoon, June 13.

The auditorium was filled, and the meeting was opened by devotional exercises, led by the retiring president, Mr. Alfred Farlow.

The Secretary announced that a message (which appears on page 674) had been received from Mrs. Eddy, and the

following telegram was presented by Mr. Edward A. Kimball, unanimously approved, and forwarded her in reply:—

Boston, June 13, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Leader:—We acknowledge with rejoicing the receipt of your message, which again gives assurance of your watchful care and guidance in our behalf, and of your loving solicitude for the welfare of the nations and the peaceful tranquillity of the race. We rejoice also in this new reminder from you that all the things that make for the establishment of a universal, loving brotherhood on earth may be accomplished through the righteous prayer which availeth much.

WILLIAM B. JOHNSON, *Clerk*.

The next item of business was the announcement of the officers of the Church for the ensuing year, as follows: President, Prof. Hermann S. Hering; Clerk, Wm. D. Johnson; Treasurer, Stephen A. Chase; First Reader, Wm. D. McCrackan; Second Reader, Mrs. Laura Carey Conant.

Professor Hering was then called to the chair and briefly addressed the meeting. He said in part,—

"Our Leader, Mrs. Eddy, through her discovery, her teaching, and her leadership, has made it possible for ideal conditions to be manifested on earth,—perfection in every direction, in all the departments of human life, in all the faculties and activities of man. Jesus' command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," is now possible of fulfilment,—not suddenly, but in proportion to our fidelity to Truth and our spiritual growth. Therefore, whatever good we may accomplish along this line of endeavor, whatever achievements we may make through the application of this teaching, whether it be secular or religious work, whatever success we may attain in approaching this ideal, even if we actually attain the ideal, we are only doing what Mrs. Eddy has already outlined and made possible for us,—only reaching the standard her teachings have set for us."

The following address to our Leader was then presented by Mr. McKenzie, and having been approved by a unanimous vote, it was sent to her by telegraph.

Boston, June 13, 1905.

To the Reverend Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Beloved Teacher and Leader:—The members of your Church, The Mother Church, The First Church of Christ, Scientist, in Boston, Massachusetts, in annual business meeting assembled, send their loyal and loving greetings to you, the Discoverer and Founder of Christian Science, and author of its text-book. At this stage in the progress of our Cause, we return heartfelt thanks to Almighty God, and rejoice with you not only in the numerical increase of its adherents, but in the great change in the world's thought regarding it, shown during the past year in the disappearance of much prejudice and intolerance before an advancing perception of the wholesome and redemptive effects of Christian Science.

We rejoice greatly that the walls of our new edifice are rising, not only to faith but also to sight; that this temple which represents the worship of Spirit, with its inseparable accompaniment—the Christ-healing—is being built in our day; and that we should have the privilege of participating in the work of its erection. As the stately structure grows, and stone is laid upon stone, those who pass by are impelled to ask, What means this edifice? and they learn that the truth which Christ Jesus revealed—the truth which makes free—is to-day being proven and is ready to heal all who accept its divine ministry. We congratulate you that the building is to express in its ample auditorium something of the vastness of the truth it represents, and also to symbolize your unmeasured love for humanity, which inspires you to welcome all mankind to the privileges of this healing and

saving gospel. As the walls are builded by the prayers and offerings of the thousands who have been healed through Christian Science, we know that you rejoice in the unity of thought and purpose which is thus expressed, showing that The Mother Church "fitly framed together groweth unto an holy temple in the Lord."

We know how intently you long for the welfare and peace of the world, and for the time when "nation shall not lift up sword against nation, neither shall they learn war any more." The deep peace which has come to us in Christian Science we regard as a promise and prophecy of the universal peace which will bless all men when this Science, which you have discovered and your life has exemplified, gains universal acceptance. We rejoice that the value to humanity of your work—its contributions to science and philosophy, and above all to religion—is being recognized and appreciated more and more by thinkers of all classes.

We desire to assure you of our ever-deepening sense of confidence in your leadership, a confidence which rests upon the proofs you have given us that in all your labor as our Leader you are divinely guided. We are thankful that with greater spiritual growth we are better able to understand what you characterize as the spirit of your life-purpose; namely, "to impress humanity with the genuine recognition of practical, operative Christian Science." That we may faithfully and adequately sustain you in the carrying forward of this purpose, is our sincere prayer.

WILLIAM B. JOHNSON, *Clerk*.

The following reports were then called for and read:—

THE CLERK'S REPORT.

Beloved Brethren:—A brief retrospection of the history of The Mother Church since its Annual Meeting in 1893 is of startling interest, and an inspiration for the continuance and the earnestness of steps taken in Christly paths. The strength of numbers, whose thoughts blend together in loving activity, is always a source of encouragement; but because our number is already large and constantly increasing, the members of this Church should not become dormant in their work, but should be actuated to labor more faithfully and to pray more devoutly for a deeper consecration and a higher demonstration of Christian Science.

The membership of The Mother Church at its first Annual Meeting in 1893 was 1,512; the membership to-day is 34,063, of which number 3,628 were admitted during the past year. Reports from 625 branch churches give them a membership of 38,216, which is a gain of 11.04 per cent. during the past year.

As children that go from one stage to another of advancement, and each year reach higher problems to surmount, so we, as students and demonstrators of what we profess, have problems constantly disclosing themselves to tax our energy, demand our effort, test our sincerity, and prove our love for our work. The problems of Christian Science are so lofty and far-reaching in their scope for the betterment of mankind, that their full purpose may not be perceived by the student while he is endeavoring to prove partially the rule that solves them.

The achievements already attained by this Church have done inestimable good through lessening humanity's weight of woe. By dispelling gloom, dissipating fears, dissolving mental darkness, and breaking the bondage imposed by erroneous beliefs of sin, sickness, and death, they have given liberty, light, health, and happiness.

That Christian Science obeys the commands of the Master is obvious, when the testimony from nearly every part of the world, given by those who have been healed of disease and those who have been redeemed from sin, utters this great fact in the language of the Psalmist, "O come, let us sing unto the Lord: let us make a joyful noise to the rock of our salvation. For he is our God: and we are the people of his pasture, and the sheep of his hand."

In the year 1902 our Leader saw the need of a larger edifice for the home of The Mother Church, one that would accommodate the constantly increasing attendance at all the services, and the large gatherings at the Annual Meeting; and, at the Annual Meeting in June, 1902, a sum of money adequate to erect such a building was pledged. Christian Scientists have contributed already for this grand and noble purpose, but let us not be unconsciously blind to the further needs of the Building Fund, in order to complete this great work, nor wait to be urged, or to be shown the absolute necessity of giving.

Since 1866, almost forty years ago,—almost forty years in the wilderness,—our beloved Leader and Teacher, Mrs. Eddy, the Founder of Christian Science, has labored for the regeneration of mankind, and time has put its seal of affirmation upon every purpose she has set in motion, and the justification of her labors is the fruit. In these years of work she has shown wisdom, faith, and spiritual discernment of the needs of the present, and of the future, that are nothing less than God-bestowed.

At the earnest request of our Leader, and with the money that she gave to make up the requisite fund therefor, the present church edifice was erected in 1894. Many pages of the history of this church are dramatic in their suggestions, but through all the enveloping hindrances there can plainly be discerned the directing hand of God. Guided by His hand, our Leader led the way, and encouraged her workers by word, deed, and prayer, and by her daily example of faith, hope, and courage.

The erection of The Mother Church was carried out under her direction. Hers was the vision that saw beyond the present moment, and her great purpose was borne to a conclusion so triumphant that a most memorable epoch was made in the history of Christian Science.

In the history of every nation there have been periods, both in the political and the religious life of the people, in which some great and lasting benefit has been promulgated, of the scope and magnitude of which the multitude had but little realization, for the very greatness of the good was too much for their vision. Not until years had passed did this epoch-making event obtain its proper perspective, and not until then was it possible for the beneficiaries to feel and to appreciate what the genius of a fearless and prophetic person had done for them.

In years to come the moral and the physical effects produced by The Mother Church, and by the advanced position taken by our Pastor Emeritus and Leader, will appear in their proper perspective. Therefore is it not the duty of all who have touched the healing hem of Christian Science, to get immediately into the proper perspective of the meaning of the erection of the new edifice of The First Church of Christ, Scientist, in Boston?

It is not necessary for us to delay our contributions in order to find out how much our neighbor has given, or to compute by the total membership of The Mother Church what amount each shall send the Treasurer. The divine Love that prompted the desire, and supplied the means to consummate the erection of the present edifice in 1894, is still with us, and will bless us so long as we follow His commands.

For nineteen hundred years Christendom has sought for a revival of the revelation of the Word of God; sought for one who, following Christ's command, "The works that I do shall he do also," should deliver mortals from the torturing pangs of evil, disease, and death.

The manifestations of the faithful practice of Christian Science teachings prove, beyond mere assumption or contravention, that Christian Science is the Science of Christ's teachings, and that Mrs. Eddy is the Revelator.

As followers of Christ in word and deed, we are naturally grateful to the Revelator of Christian Science, who has shown us that the marvelous works of the Master violated no law, and were in absolute accordance with the law of

God. Her revelation has brought to us health, happiness, holiness, and the meaning of the true brotherhood in Christ; so that to-day we realize to a glorious degree the meaning of the words of the Apostle:—

"Beloved, now are we the sons of God, and it doth not yet appear what we shall be: but we know that, when he shall appear, we shall be like him; for we shall see him as he is."

WILLIAM B. JOHNSON, *Clerk*.

THE TREASURER'S REPORT.

General Fund: Amount on hand June 1, 1905, \$92,187.52; expenditures June 1, 1904, to May 31, 1905, \$118,865.25; included in the expenditures is the sum of \$58,403.17 invested in real estate.

Building Fund: Amount on hand June 1, 1905, \$303,189.41; expenditures June 1, 1904, to May 31, 1905, \$388,663.15; total receipts June 19, 1902, to June 1, 1905, \$891,460.49.

Amount necessary to complete the sum of \$2,000,000 pledged at the Annual Meeting, 1902, \$1,108,539.51.

STEPHEN A. CHASE, *Treasurer*.

A number of telegrams and letters were then read, bearing loving greetings and giving expression to loyal and very practical devotion to the work of completing the building for The Mother Church. On motion, a vote of hearty thanks and reciprocation of love and good-will to all, was unanimously passed.

A vote of appreciation of the faithful labors of the Christian Science Board of Directors was passed, and the meeting closed with a sense of gratitude and love abiding in all hearts.

Meeting of the Executive Members.

THE Annual Meeting of the Executive Members of The Mother Church was held in the church edifice, at nine o'clock, June 10th.

There were present about fifty members from Boston, New York, Pennsylvania, Rhode Island, New Hampshire, Connecticut, and other near-by States.

Matters concerning the interests of the Christian Science movement were discussed, and the meeting was inspiring and helpful. The following dispatch was sent to the Rev. Mary Baker G. Eddy:—

Boston, Mass., June 10, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader and Teacher—Assembled in Annual Meeting within the walls of The First Church of Christ, Scientist, founded by you, we, the Executive Members of this Church, desire to share with you the gladness and promise of this Communion season. At the very beginning of our greeting we place the word "gratitude," as best becoming the spirit in which we convene after another year of love and labor. We rejoice with you over every evil vanquished, every temptation turned to naught, every inducement to disease robbed of power, every disappointment converted into joy, and every suggestion of separation between God and man proven false. We know that such proofs of Christian Science gladden your heart, and make easier your loving work in behalf of all mankind.

We find that, as our experience broadens and deepens, we are better able to appreciate the meaning of your life-motive. The Scriptures say, "For the law was given by Moses, but grace and truth came by Jesus Christ." Moreover, Jesus prophesied, "When he, the Spirit of truth, is come, he will guide you into all truth." We believe that this prophecy is fulfilled. There are unmistakable signs that the world at large is rapidly learning to apprehend the meaning of your mission and is recognizing the marvelous mental, moral, and physical regeneration resulting therefrom.

The example of your daily living is kindling in us a livelier sense of brotherly love and charity toward all men, and a glimpse of the brotherhood of man is being vouchsafed to us as we learn to have one God and to discard idolatry.

We welcome the new building of The Mother Church as evidence of a clearer understanding of man's at-onement with God and of the Scriptural words, "On earth peace, good will toward men."

With ever-increasing certainty we find in your great work, the Christian Science text-book, "Science and Health with Key to the Scriptures," the rule for the solution of every difficulty which can confront us, and we are greatly solaced and invigorated by the thought that good is eternal and "fadeth not away."

Thus united in the solidarity of a common effort, we greet you to whom we are bound by the indestructible bonds of love and gratitude.

In behalf of the Executive Members we subscribe ourselves,

Your loyal and faithful students,

WILLIAM D. MCCrackAN,

EFFIE ANDREWS,

EUGENE H. GREENE,

Committee.

An Interview with Mrs. Eddy.

THE *Patriot* prints with pleasure to-day [June 12] the entire story told in *The Boston Herald* yesterday by Sibyl Wilbur, entitled, "An Interview with Mrs. Mary Baker Eddy."

The pen picture of Pleasant View and the surroundings, and of the respected and revered Leader of Christian Science, Mary Baker Eddy, and those associated with her in her home, is so beautifully and graphically painted that a lasting and desirable impression cannot fail of being left by it on all who read the description and interview, and cannot fail of a place in Christian Science literature, and the value of it will increase as the years go by.

As one who recently had the pleasure of visiting Pleasant View, and of talking with Mrs. Eddy, we wish to verify in every particular the recital of facts and impressions given expression to by Miss Wilbur in the article as it appeared in the *Herald* yesterday, and as it appears in this paper to-day.

In its perusal, and on account of the personal experience had, doubtless the candid, unadorned, straightforward truthfulness of it, and withal its unstudied simplicity, are what appeal to us most and impress us most vividly.

By entering into the spirit of Miss Wilbur's article, those who have had the pleasure of visiting Pleasant View, of being blessed with the spirit of the place, of having seen its honored occupant, touched her hand, and talked with her, face to face, in that room where she has labored so long and lovingly and arduously for the betterment of mankind, since time with its softening and mellowing and sanctifying influences has contributed so liberally to the perfect rounding of a beautiful life, get in perspective a picture that is false in no particular and exaggerated in no outline.

Editorial in *The Daily Patriot*, Concord, N. H.

Letters to our Leader.

Kansas City, Mo., June 7, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

In response to the reminder from the Directors of The Mother Church, appearing in the *Sentinel* of May 27, and in recognition of the need of the hour, and the great blessing to be derived by all mankind through the completion of The Mother Church, a special business meeting of the members of First Church of Christ, Scientist, of Kansas

City, Mo., was held June 2. As a result of this meeting the sum of \$2,000 has been forwarded to Mr. Chase. At another meeting, held to-night, June 7, it was unanimously decided to postpone much-needed repairs on our local church edifice, and to forward to The Mother Church the amount of \$1,352.00, which had been especially raised for these repairs. A surplus of \$300.00 from our general fund was added to this amount, making a total of \$18,212.00 forwarded to date. We firmly believe that the need of this hour demands a loving sacrifice from every Christian Scientist, and in this we are endeavoring to follow your example of self-sacrifice and love for mankind. We feel assured that as a branch of The Mother Church our every need will be supplied through the fulfilment of this, our present and paramount duty.

ADAM H. DICKEY, C.S.B.,
JACOB H. LANDIS,
JOHN H. WHEELER, C.S.B.,
MRS. EMMA D. BEHAN, C.S.D.,
MISS DORA M. KNAPP, C.S.B.,
MRS. D. G. SAUNDERS,

Committee.

Curran, Ill., February 27, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—I feel that my first expression of gratitude and thanks for deliverance from the "last enemy" must be to you, who have revealed to this age the new-old Christ-truth, that the recognition of God as ever-present Life can and does dispel the illusion of death.

Every material condition indicated death, and this sentence had been pronounced audibly upon me. All the members of the household believed it true but one, who, standing by my side, reiterated again and again the statement, God is Life, until thought responded to the word of Truth,—the word which "shall not return unto me void;" and consciousness dwelt in the "secret place of the most High," in the knowledge that "in Him we live, and move, and have our being."

How can I thank you, dear Leader and friend, for your self-sacrifice, toil, and love which have made such an understanding of God possible, except to walk each day, each hour, more closely in the strait and narrow way? This I shall strive to do.

Lovingly yours,

MRS. BESSIE MERRICK.

Jamestown, N. Y., April 6, 1905.

Beloved Leader:—It will be a pleasure to you to know of the favorable comment made upon Christian Science from the pulpit of the First Congregational Church of this city. Rev. Dr. W. H. Hickman, president of Chautauqua, the Methodist assembly, while filling the vacancy during the absence of the regular pastor of this church, preached many interesting sermons, one being on "The Touch of the Power." He took for his text Matthew, 9:20-22, the healing of the woman who had an issue of blood. I here give the points which may interest you, but not in exact quotation.

There are a class of people to-day who firmly believe they are healing as Jesus did. I am convinced we have not attained our full inheritance as sons and daughters of God. Mrs. Eddy is bringing the healing to her Church. Let her continue her discoveries. Let those who believe in her continue to believe in her, it may benefit us all.

He also told of three cases of healing which had come under his personal observation, and while firmly believing in the skill of the physician, he vaguely implied that should all else fail him in his extremity he would not be opposed to trying Christian Science. Lovingly,

MARTIN F. JACKSON.

Testimonies of Healing.

I have often wished to tell how grateful I am for Christian Science, and for the many blessings it has brought into my life. It came to me at a time of great mental depression, adverse circumstances, loss of dear friends, and months of ill health, wherein I could see life only as a burden. About this time a kind friend sent me as a Christmas gift, "Science and Health with Key to the Scriptures" by Mrs. Eddy. I was then suffering from a severe attack of peritonitis and was too weak even to hold the book in my hands. I had heard of Christian Science, but thought it of no practical use to me; however, if I got better I would read the book for the giver's sake. I improved slowly and began the study of the book, and in it I found a medicine that heals all sorrow, sickness, and sin. A bright star of hope appeared, lighting up the dim future and leading me to the ever-present Christ. It has given me a sure trust in God, comfort in sorrow, health and strength to work and to help others. There have been dark days, opposition and prejudice to overcome, but through all these things I never doubted the saving and healing power of Christ, Truth, as revealed in Science and Health. The little star still shines on as a beacon light, leading unto the perfect day. There is still much to overcome, but I can say with Paul, "He which hath begun a good work . . . will perform it until the day of Jesus Christ."

I was deeply impressed by a testimony that appeared in the *Sentinel*, August 20, 1904, the healing of a tiny baby, also the letter written by the father of the child. The testimony brought to me a feeling of great joy and thankfulness; joy to know that infinite Love is reaching us here and now, supplying all human needs, releasing the sin-laden from bondage, giving hope and comfort to the sorrowful, health and rest to the weak and weary. May God bless all the workers who are sowing the good seed. May He water the soil with the dew of divine Love and give them fruits an hundred-fold. I take this opportunity to express my sincere gratitude for the Christian Science literature. The Lesson-Sermons are a continual feast. For all these blessings I give God thanks, and the greatest blessing of all is the victory over self.—E. HOBBS, London, England.

I was healed by Christian Science in February, 1887. While studying at the Conservatory of Music in Leipzig, I was stricken with paralysis during one of my lessons. I was playing a concerto through with my teacher, preparatory to a rehearsal with the orchestra, when I suddenly lost control of my hands, which were on the piano keys. My teacher advised me to rest the remainder of the day, thinking that the trouble was due to fatigue. The most intense pain set in, described by physicians later as being like the pain attending gunshot wounds. I grew steadily worse, and left Leipzig for rest and travel. I consulted a physician in Munich, after a few weeks, who said that I had had two strokes of paralysis, and had lost the sense of touch. I was sent to Switzerland and spent two months under the care of a celebrated physician. The pain continued, but I would not give up, and I returned to Leipzig, determined to play in spite of all that had been said by the physicians. The first attempt to practise, however, convinced me that I could not play, and although the nerves in my hands had been traced with needles until the blood dripped from the ends of my fingers, without causing pain, I did not realize the loss of the sense of touch. I then consulted another physician, and he said that I would never be able to play again, but that something should be done to try to relieve the excruciating pain I endured; that it was not a case for one man, but for the medical faculty of the University.

Being a student in a royal institution under the same authority as the University, the case had to be given to the medical faculty of the University of Leipzig to determine

whether I was able to continue five weeks of study in order to complete a course entitling me to a diploma or certificate. After one week's consultation, the case was pronounced hopeless and incurable. They said that half my brain was gone and the spinal cord worn out in spots; the extensor muscles and nerves in my hands were destroyed and the nerve cells nothing but dead tissues; and that there was no relief for the pain. They hoped that death might release me within three months, otherwise, I should have to live out my life in an insane asylum. I was advised to return to my home, as nothing could be done for me, and to avoid all intellectual work. One of the worst features of the case was my youth. The condition easily became chronic, as I was not full-grown. My home was in Texas, at that time three weeks' journey from Germany.

For six years and eight months I battled with that disease known to *materia medica* as professional *neurosis*. I never ceased to try to recover,—was without medical treatment but two months during the whole time, and studied and read medical works to try to get an intelligent understanding of my own condition. All the physicians consulted agreed with the first diagnosis, but were willing to experiment; hoping to prolong my days outside of an asylum. For some unaccountable reason I could not die, but lived right on without some of the conditions considered necessary to human life. Right here I wish to pay tribute to the American physicians who tried to help me: more loyal and unselfish devotion to the cause of relieving suffering humanity I have never seen.

I had been raised in an orthodox church, but received no help in my misery from its teachings. To be told that God was afflicting or punishing me was poor consolation, and I left the church and devoted sleepless nights to the study of German philosophy, deciding finally that there was no God.

The strain became too great to bear, and I realized that I was breaking under it and losing my memory. Having tried all kinds of treatment, including Swedish movement-cure, baths, spiritualism, and mesmerism, and feeling that all resources had been exhausted, I decided to commit suicide rather than go to an asylum. Just at that time there was something in the papers about Christian Science having healed some cases of disease. Five years before I had taken forty treatments from a so-called mental scientist, without any benefit. As a last resort I decided to spend ten dollars on Christian Science in Chicago, and to let that end all,—expecting no help. Oblivion was all that I longed for. I went to a practitioner and gave a brief outline of the case. Although I refused to hear one word about God, Jesus, the Bible, or Science and Health, I was perfectly healed in two treatments—two days—so that I could play the piano. Three years later I returned to Europe, and for two years studied from five to ten hours daily, always growing stronger mentally and physically.

The experience of so much suffering was sad, but that grave truly was swallowed up in victory, as hundreds have been led to Christian Science and healed through this one case alone. Mortal mind uninstructed in Christian Science resorts to many reasons for trying to evade admitting the truth of its teaching. Where the healing cannot be denied, it is often said that the chief objection to Christian Science is the fact that its followers love Mrs. Eddy too much.

The Bible teaches that if we do not love our brother whom we have seen, we cannot love God whom we have not seen. It therefore follows that if we are not grateful to her through whom this healing truth has come, we are ungrateful to "God from whom all blessings flow."

STELLA H. SISSON, Chicago, Ill.

By what seemed to be an unjust force of circumstances I went to a far distant city to make my own way in the world. It was some time after I arrived in this strange place before I secured a paying situation. I therefore spent

my leisure time among my friends whom I had formerly known in the East. They had all become Christian Scientists after coming West to live. Not being prejudiced against any belief which seemed to help my brother-man, I became interested. As time passed, and the contents of my pocket-book diminished, the words, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," became impressed upon my thought, and I found myself seeking the kingdom through the study of Science and Health, by that grand and courageous apostle of Truth to this age, Mrs. Eddy. I received treatment, and long before I felt that I had any scientific knowledge of the kingdom, a good situation was "added unto" me. It is now over two years since I first began studying, and only lately have I felt that I was attaining an understanding, but blessings have poured upon me all that time. It is in gratitude to God that I write this testimonial of the care of divine Love which has so fully met my need.—HARRIET E. SWETT, San Francisco, Cal.

[Translation.]

It is now a year since I heard of Christian Science. About three years ago I suffered much with backache. One day I came home suffering so intensely that I could hardly move. We sent for a doctor, who prescribed two kinds of medicine for me, which I took. In about three weeks an abscess formed on the abdomen which was afterwards lanced, and a short time later it had to be lanced again. I was under the physician's treatment for three months, at which time I had much bladder trouble. We sent for another physician, who, after an examination, ordered me to be taken to a hospital immediately, where an operation was at once performed. Twelve days after the first operation a second one was performed. The physician said that I had consumption of the bladder. For four months I was treated daily, when another operation was performed. I spent seven months and two weeks in the hospital, but the wound in the bladder would not heal. At that time my wife had me taken home in a carriage. I was so weak that I could not walk a block. The wound had to be dressed daily. I had been home for three weeks when rheumatism set in, which affected the nerves of my back. I could no longer walk upright, and every step caused me great suffering. This lasted for two months, when one day my wife on returning home told me of Christian Science. I took treatment, and though the healing was slow, one trouble after another disappeared. Right here I wish to say that the doctor had given me no hope of recovery; but God be praised for what He has done for me.

I wish to express my sincere gratitude to Mrs. Eddy. To-day I can testify to the fact that I am a well man. I have now been working for four months and feel better than ever before, and I am more contented than I have ever been before, in all my life.—JOHN RAUTZKE, Chicago, Ill.

I wish to bear witness to what Christian Science has done for me. When in the depths of despair from great sorrow, I turned, as a last resort, to Christian Science for help. I not only gained relief mentally, physical ailments the meanwhile disappearing, but I experienced a great spiritual uplift. After a while error tried to assert its seeming power through scholastic theology and other channels; but divine Love held me fast and brought me out into the light again. In course of time I was required to give up my home. It was a long, hard struggle, but in this Truth was again the victor, and a most harmonious, happy home was provided for me.

For the many blessings received and for the great joy of ministering to others, I am deeply thankful to God, to our beloved Leader, and to all who have so kindly assisted me.—JOSEPHINE C. WORK, Medford Hillside, Mass.

I am glad to express my gratitude for the innumerable benefits I have received from the knowledge of Christian Science. It has been, and is daily, a help and a remedy in every trouble. The understanding I have obtained from the teachings of Mrs. Eddy in Science and Health, and her other writings,—that God is Love, omnipotent and omnipresent good,—in whom is no pain, sorrow, or sin,—has enabled me to lose the old beliefs which had brought to me very great sickness and despair. The more faithfully I study and try to follow the rules of Christian Science the more I gain in health, happiness, and prosperity. I am very grateful for many experiences of physical healing, but far more so for mental healing. Christian Science totally destroys the wish to sin, and it reveals the joy and the beauty of holiness. All students of Mrs. Eddy's teachings must feel with me that we owe her a very great debt of gratitude for being found worthy to receive this wonderful revelation of our Father's love and of His kingdom. It is so sweet to know that He has *not* placed us in this world a prey to any mischance or adverse circumstance, but has given us, as His children, the power to overcome all things, whether sin, sickness, or death. To the beginner in Christian Science the Wednesday evening meetings are a great help. We learn, from the experiences of others, to have patience when we seem to fail in our demonstrations, and we are refreshed with the spirit of love and hope, remembering the many benefits already received. I feel most thankful to the workers in England, who by their devotion and example are encouraging and helping onward the faltering steps of those who would fain go faster.

K. H. H. FERGUSON, London, England.

I think it is sometimes encouraging to hear testimonies of slow healing in Christian Science, and I shall be very glad if my experiences prove helpful to others. Before I heard of Christian Science I had been suffering for years from dyspepsia, and, although I tried almost every remedy I could hear of, saw many doctors, and took long voyages, still I grew steadily worse, and the last doctor I saw, said frankly that he could not cure me, and that I was never likely to get well. I have been studying and trying to practise Christian Science now for nearly four years, and during that time I have been slowly and almost imperceptibly healed. I now feel better than I ever did in my life. As soon as I began to read Science and Health by Mrs. Eddy, I knew it was a revelation of Truth, and for weeks I read it all day and for part of each night. I got a foretaste of spiritual realization, and felt then so good and happy that I thought I should never be troubled with an unkind or irritable thought again, but, like many others, I had to descend from the "mount" and begin to work out my salvation. I asked for treatment and, I am thankful to say, I saw at once that the slowness of my healing was caused by errors in my own consciousness. I did not, therefore, waste time in wondering whether circumstances or the practitioner was to blame, but I did honestly begin, and I have continued to face each claim of self-love or any other error, as it came up, and by declaring the nothingness of evil and the allness of good, I have been enabled to cast out many ills. My experience in Christian Science has not been a "bed of roses." I have had many struggles, and sometimes I have seemed to be enveloped in dark clouds, but I have always looked to divine Love for help and He has never failed me, and I know He never will. I know that the clouds may become God's chariots, by which we are carried up to Him. I have always emerged from the gloom to a higher plane of thought. I have often found encouragement in Bible texts which exhort to patience, and when I have seemed to be beset by many foes, I comforted myself in the assurance that there is only one power—*infinite wisdom and Love*—guiding all; and that all things do work together for good to those who honestly desire

good. I have lately passed through the greatest trial of my life, the loss of my mother, but I was able to prove that the knowledge of God in Christian Science takes away the sting of death; and I have felt no sense of separation. The text, "I am the resurrection, and the life," came to me instead of any thought of death, and my consciousness was filled with a sense of ever-present Life and Love.

The greatest joy which Christian Science has brought is the spiritual awakening; it has indeed brought "beauty for ashes" and the "oil of joy for mourning." To me the sun shines more brightly, the birds sing more sweetly, the flowers are more fragrant, friends more true and loving. I know also that, as I am able, in God's strength, to overcome more and more of the beliefs of material sense, and as my spiritual understanding grows through the unfolding of truth in my consciousness, my perception of beauty and of good will become more and more clear, until I awake in His likeness, and then I know "I shall be satisfied," for I shall see divine Love and His manifestation in all the glorious beauty of divine reality.

I am very grateful to Mrs. Eddy for her steadfast courage and unselfish life.

MISS RITA CURRIE, London, England.

After many ills and trials, God's omnipotent care led me to Christian Science, and now, notwithstanding the fact that I was instantaneously healed of a disease which, to sense, required surgical treatment,—an ailment of five years' standing, due to childbirth,—it is the spiritual uplifting to which I attach the most importance. It is gratifying to see how many Hebrews, my former co-religionists, are coming into this saving truth, and this fact recalls those words of the prophet, "O house of Jacob, come ye, and let us walk in the light of the Lord." Our beloved Leader, the most unselfish of women, has certainly been called in this age by our Father in heaven to unite the nations, and surely Christian Science is the only means by which the unity of good can be established. Mrs. Eddy's book, "Science and Health with Key to the Scriptures," explains so clearly the Christ-idea that, through its study, all race prejudice disappears; the Jew becomes reconciled to the truth of Christ's sonship with God. Her explanations bring to the Jews spiritual enlightenment and an understanding which cannot be refuted. Thank God for our inspired Leader, for it is only by spiritual intuition that such truth could be discerned. God—the one Mind, the only intelligence—will continue to bless her noble work; and the day is not far off when "nation shall not lift up sword against nation, neither shall they learn war any more."

NETTYE NACHMAN, New York, N. Y.

For one to be transported into blissful freedom from a sense of excruciating pain, through the healing power of Truth, and that instantaneously, is surely convincing proof of the ever-present help which Christian Science has to offer a suffering world. This was my experience when I was suffering recently the most intense agony from an injured eye. For a period of three days and nights I had suffered from it, and to undertake to describe fully the suffering attending the incident, would bring it to mind too vividly. While the work of healing did not reach completion until three days after the injury, it was so decidedly accomplished that I arose from what had been a couch of suffering, after a night of untold agony, to exclaim, "I am healed!" Error had fought its final battle all through the night; my brain had seemed to be on fire. My sufferings had been so much in evidence as to call forth the sympathies of my wife, who is not a Christian Scientist, but who had respected my wishes and had not interfered with my dependence on Science on previous occasions. When the evidence of my suffering was so manifest in me, she was led

to suggest a material remedy, the application of warm water. While I recognized her good intentions, I saw the danger of yielding at the most trying period of my suffering. I declared against the healing power of matter, knowing that there is no compromise in Christian Science.

The first intimation of my healing was just before retiring, after the departure of some friends who had witnessed my trying condition. I felt the impulse to speak of it then. The suffering that followed after retiring, plainly told me, from previous experiences, that it was the final struggle of error. So filled was I with the truth of Christian Science, reaped from a constant study of our text-book for many years, that an abiding sense of Truth did not desert me in the face of the most tenacious suffering and pain. Truth maintained its supremacy as I willingly gave up to its healing influence. Many times during the period of suffering the words of Mrs. Eddy in *Science and Health*, page 393, line 13, came to me, and I was led to "Hold fast that which is good." The sense of victory was as clear as the sunlight that seemed to lend its brightness to the freedom which came to me on that morning after a night of pain. The experience was a bitter one, and could I have averted it I most surely would have done so, but the lesson that has been gained, like many another during my new life in Christian Science, has wrought for me an understanding, the value of which can be measured only by one who has wrestled with error and overcome it by the truth. I would say to others who may have a slight understanding of the healing power of Christian Science: Error cries the loudest when the victory of Truth is at hand. This was my lesson.—EUGENE A. VAUGHN, Warren, R. I.

I have long felt the promptings of divine Love to express my gratitude for the many blessings I have received from the study and application of the truth as taught in *Science and Health*. In my wanderings through the wilderness of materiality, when my way seemed hedged in on either side by mountains, and the enemy behind, my pathway has been opened through the Red Sea of difficulty, and by the power of Truth, as revealed in Christian Science, I have been enabled to pass through dry-shod. "Science and Health with Key to the Scriptures" has so opened my understanding of the Bible that these two books have become my pillar of fire by night and cloud by day, leading me safely through every difficulty which has confronted me on my journey toward the promised land of perfect harmony.

I was led to investigate Christian Science by the need of physical healing, and this was granted me in a most beautiful manner through the reflection of Love by the practitioner on whom I called for help. It destroyed a severely cankered condition of the throat in one night. From that time I began thirsting for the water of Life which heals sin as it heals sickness. My progress has been what might seem slow, but I know how the old bottle is filled with false beliefs in the power of medicine and in a corporeal God, but the new wine of Spirit is surely transforming me, and the filling of a new bottle with new wine inspires me with courage to go on. From a life in which medicine appeared to be a daily necessity for chronic ailments, Christian Science has enabled me to live the last six years without the use of one drop. All the sickness which has come to us in that time has been overcome by the understanding we have gained of the Christ-cure. Among some of the diseases which have been thus overcome for different members of our family, I will mention dysentery, scarlatina, the grip, chicken-pox, sprains, croup, etc. As we do not live near a practitioner, the power of Truth alone to heal was proven to us on many occasions in a very wonderful manner, and words are inadequate to express our gratitude to God for this deliverance. Only a parent can fully realize the situation I was placed in when on a visit, miles from any Christian Scientist, among friends who did not comprehend this truth, and whose thought was not in sympathy

with what they understood Christian Science to be. I had to meet an attack of croup for our only child, to see his eyes fill with tears as he struggled to breathe; to know that his fear was trying to master his childish faith in God's power to help him at once; and to refuse the material aid of the dear relatives who did not understand how we could trust God to heal such a case. This showed us that we must prove our faith by our works. We used our understanding and the word of Truth, declaring that God is a present help in trouble, that He was present and was able to heal and overcome anything and everything which seemed to oppose His power.

To see my boy lie down, his fear destroyed, to see him go peacefully to sleep, his breathing normal, was a demonstration of the allness of God that I shall never forget. Here let me ask any one who thinks that we love our text-book and its author too much: Is it a marvel that one who has had so much forgiven (destroyed) should love much? Did space allow I should like to tell of other wonderful evidences of God's power and willingness to heal, which it has been my blessing to receive. For the healing of sickness I humbly acknowledge myself debtor, and shall utterly fail to express in words my gratitude, knowing that deeds not words are the truest prayer of thanksgiving.

For the enlarged sense of love toward God, and man as my brother; for a broadened conception of life and its possibilities as taught by Jesus the Christ; for a light which never before shone on the sacred pages; for aspirations which know no looking backward and no self as sense; for all these great blessings which have come into my life as the direct result of Christian Science, I am filled with a sense of gratitude which can only find expression in a loving effort to pass on to other thirsty ones the "cup of cold water" in the name of Christ.

MRS. CARRIE HALL ARCHER, Hannibal, N. Y.

As my thought goes back to the time when my trouble seemed so real, and my heart was so sad; when I had lost all faith that any power could lift me above the sense of discouragement;—when I compare that time with the present, my heart overflows with gratitude and love to God, and to all those who have helped me to find the truth. I belonged to an orthodox church for thirty-five years and took an active part in its work. I received a great deal of good through my belief, and thought I was learning much about God, but there was one thing I did not learn, and that was, how to pray so that my prayers would be answered. I have found, through the study of *Science and Health*, that God is a present help in every time of need, and every day I find cause for thankfulness that one in this age has been so pure, so near to God, as to be able to grasp the truth and know how to impart it to others. My daily prayer is that I may so live as to grow in grace and in the knowledge of the truth. I desire to thank Mrs. Eddy for what she has done and is still doing for mankind.

MRS. SUE FLOWERREE, Cherry Dell, Mo.

Thus was beauty sent from heaven,
The lovely mistress of truth and good
In this dark world; for truth and good are one,
And beauty dwells in them and they in her
With like participation; wherefore, then,
O sons of earth, would ye dissolve the tie?
"Orators of the Revolution."

Forget not all the sunshine of the way
By which the Lord hath led thee,—answered prayers,
And joys unasked, strange blessings, lifted cares,
Grand promise-echoes! Thus each page shall be
A record of God's love and faithfulness to thee.

FRANCES RIDLEY HAVERGAL.

From our Exchanges.

The Churches are sick; the ministry is on the decline; but to rightly diagnose the case is to discover the remedy. In this decline I find inspiring encouragement. I am glad that young men and women shun the dogmatic spirit and distrust the professions menaced by it; I am glad that our colleges teach history so well that their students cannot bide the thought of miraculous interventions with the benignant order of special revelations and divine partialities; I am glad that the law of equity is so well understood, justice so well understood as a fundamental attribute of being, that the student refuses to believe in eternal torments as a reward of mortal sins, or an infinite beatitude being won through finite credulity or a lack-luster obedience to ecclesiastical traditions and mandates. I greatly rejoice that the community is getting so coherent, so conscious of a communal life, that it has lost relish for sectarian pretensions and all patience with creedal barriers. I am glad that life is assuming such significance everywhere and always that it grows indifferent to the special sanctities of particular dates and places.

All this is proof that out of this decadence must come the more adequate expression of religion. We see on every hand a ripening for this larger thing, a church based on the central and common needs of the community; a church that will abolish denominational and race consciousness, make Sabatical the seven days in the week, Scriptural all high prophecy and lasting poesy, and companionable the widest reaches of society.

JENKIN LLOYD JONES.
The Outlook.

In the present revival can be discerned the features of a great and protracted awakening. . . . It has the character of a long reformation. The Churches are breaking away from the coldness and worldliness of the past. The spontaneous element of the revival is an indication of the revolutionary character of the present outpouring of the Spirit. It will require time for the accomplishment of its mission. . . . The result of the present revival will be the re-establishment of the Holy Spirit as the administrative officer of the Church. To fully consummate this great result the special manifestations of the presence of the Lord may be expected to continue through years of joy and blessing.

The Watchman.

Personal acquaintance with God has been the sustaining and inspiring element with Christians ever since the beginning. We are not orphans and we are not left without a sense of our Father's presence. This sense cannot, however, be in the realm of sight, touch, and hearing. God is a Spirit, and can only respond to the spiritual in us. And Christ has told us that his own passing out of the world into the spiritual realm was an uplift for our relations and a means of increase for our power.—*The Congregationalist.*

If the Church would only go forward to the method of Andrew and Philip there would soon be a revival, not of the masses, perhaps, but of the individual. Those men brought their friends to Jesus. Their work was permanent and constant. The age is ever talking about going back to Christ. Let us rather go forward. We are in some respects two thousand years behind the apostolic methods.

The Westminster.

The conviction is gaining ground that mere belief, unvitalized by spirituality and high moral purpose, is not of the first importance, as it was once thought to be. Belief is often temperamental, or due to accident and inheritance; but character is integral, vital, and supreme.

The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL, 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

250 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.
 Ten copies or more to one address, one year, each copy, ninety-five cents.
 Twenty-five copies or more to one address, one year, each copy, ninety cents.
 Fifty copies or more to one address, one year, each copy, eighty cents.
 For Foreign subscriptions add, for postage, fifty cents per copy to rates given.
 Six months' subscriptions received at half the above rates.
 No subscription received for less than six months.
 Subscriptions to the *Sentinel* will be entered to begin with the first of the month.
 The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.
 Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

The *Boston Herald*, in a timely editorial concerning President Roosevelt and his appeal to the warring nations, and touching incidentally upon the cry for a larger navy, says,—

"Another matter to which it is timely to call attention now, is that the President of the United States has accomplished the delicate task he undertook, of giving calm counsel to two mighty nations, one flushed by great victories in war and the other sore on account of great misfortunes, without any show of controlling naval power to support his reasonable suggestions. The only authority seeming necessary and effective was their conformity to the world's sense of justice and humanity. If his interference (if the action may be called an interference) had been backed by twice as many battleships as are now aloft displaying the flag of the Union, does any one presume that the famous identical letter sent to the Czar and to the Mikado would have been received with greater courtesy or commanded more immediate attention? Is it not made apparent that in order to conserve the peace of the world by good counsel, clear of selfish motive, there is no need to possess great military power? The refusal of Congress to comply fully with the President's request for four new battleships did not at all weaken his influence for peace in this exigency.

"The case would have been different, no doubt, if he had attempted to 'butt in' with an aggressive, commanding temper to dictate what Russia and Japan must do. That sort of thing requires the backing of a threatening military force to compel submission. It was Japan's physical weakness, in comparison with the combined European Powers, that forced her to forego the legitimate fruit of her victory over China in her last war. Such compulsion did not make for peace because it did not make for justice. It is not unreasonable to say that the terms then enforced were one influential cause of the war now being waged. That experiment will not be repeated this time. There was no profit in it. The wisdom of respecting nationality has received a powerful re-enforcement. The consequences of the aggressive

disposition of Russia may well be received as a lesson for ourselves in respect of any ambition cherished in the direction of world-power."

Professor George T. Ladd, who recently resigned the chair of Moral Philosophy and Metaphysics at Yale, will, at the close of the war between Russia and Japan, go to Japan for one or two years and under the auspices of the Imperial Education Society of Japan, aid in the development of the system of education of the country.

Although the United States Attorney General has decided that Japanese cannot become naturalized citizens, the preparations for Japanese colonies in Texas continue. The experiments already made have been successful. Their skill as expert growers of rice is expected to add much to the wealth of the State.

Mr. Paul Morton, who retires from the Cabinet July 1, as Secretary of the Navy Department, has accepted the position of chairman of the Board of Directors of the Equitable Assurance Company.

Foreign.

Great Britain has categorically declined to accept the Sultan's invitation for an international conference on the Moroccan situation, which has been brought about by a speech of the Kaiser in Tangier on his recent visit to that country. Germany, it is said, is contending only for the "open door" policy for herself in Morocco.

The French Government has authorized the construction in Indo-China of an extension of the Saigon Railway to Khan-Hod, to cost \$5,840,000. Also a line from Phanrang to Danhim at a cost of \$2,300,000; and of another from Hue to Kwangtri at an expense of \$1,460,000.

The driving of piles for the foundation of the new campanile of St. Mark's has been finished. The work of surrounding the foundation by a stone wall ten feet thick is now progressing and next spring the building of the campanile itself will be begun.

The Spanish Premier has presented the budget figures for 1906, which call for an expenditure of \$202,147,000 from an indicated revenue of \$206,340,000. The final accounts for the past year leave a surplus of \$9,000,000.

Industrial and Commercial.

Paper made from corn stalks at one-third the cost of making it from wood fibre and rags is the latest announcement in paper-making by a company organized to utilize the waste products of the corn fields. Samples of the new paper, it is said, show it to be the equal of the fine goods made from linen. One sample resembles Japanese vellum very closely. In producing this fine paper common, ordinary corn stalks, of which 35,000,000 tons rot yearly in the corn fields of the western States, was used. The cost of manufacturing a ton of this paper ranges from \$22 to \$25. The manufacturing cost of a ton of rags or pulp runs from \$60 to \$75. When received at the paper-mill the stalks are depithed. The pith is rolled into a fine paper. The hard outer covering is macerated and digested and used to make coarse wrapping paper and box board. The company will utilize every vestige of the corn stalk, as certain portions are used in the manufacture of cellulose, gun-cotton, powder, varnish, lubricants, papier-mache, etc.

Officers of the Lithographic Artists, Engravers and Designers' league of America, recently in convention at New York, have made an agreement with the employing lithographers to raise the standard of the trade in this country by forming an apprenticeship board. The highest class of lithograph work is now done in Europe. It is hoped that under the new scheme this country can produce men capable of doing any grade of work. The board will be composed of employers and employees. Boys who desire to

become apprentices will be tested as to their ability, will be put on probation for six months and will then be examined again. If then they show real ability they will become full apprentices.

The Hungarian chemist Brunn, of the University of the same name, has described his alleged discovery of a liquid chemical compound which renders certain kinds of matter proof against the effects of time. He asserts that it doubles the density of nearly every kind of stone and renders it waterproof. It imparts to all metals qualities which prevent oxidation. The professor says that while traveling in Greece some twenty-five years ago he noticed that the mortar in stones of ruins which were known to be over two thousand years old was as hard, fresh, and tenacious as if it had been made only a year. He claims he has discovered its secret.

It is announced that the details are being worked out for consolidating the Kanawah and Hocking Coal and Coke Company, the Continental Coal Company, and the Sunday Creek Coal Company. The new company will control 90,000 acres of coal lands, wharves, and docks, and its own railroad cars. The capital stock will be \$40,000,000. This company will rank next to the Pittsburgh Coal Company in its producing capacity.

More than \$1,000,000 and 100,000 acres of coal land were involved in a deal which has been closed at Louisville recently, whereby J. Pierpont Morgan, John W. Gates, P. A. B. Widener, and other capitalists interested in the North American Company, came into possession of the best coal properties in Union County, Kentucky, extending into Webster and Crittenden counties.

The United States Geological Survey has compiled statistics of the clay-working industry of the United States in 1904, from which it appears that the value of the clay products was \$1,311,023,248, made up as follows: Brick and tile and the coarser products, \$105,864,978; pottery and the finer products, \$25,158,270.

The Lake Shore established a new record between Chicago and Buffalo last week, covering the 526 miles in exactly 453 minutes. The train was made up of four Pullmans and was drawn by one of the usual large prairie-type locomotives. The average speed, deducting stops, was 70.9 miles an hour.

Crawford, Washington, and Benton counties of Arkansas shipped this season 650 cars of strawberries totaling \$350,000 in value.

General.

During a recent trip of a fruit steamer northward, while about fifty miles from Havana, a waterspout of immense size was passed. "It is no unusual thing to pass waterspouts in these waters," the captain is reported to have said, "but this one was so extraordinary that it attracted my particular attention and created quite a stir among the passengers. We sighted it early Sunday morning, about a mile off our course on the port bow and about fifteen miles ahead. At that distance it looked like an immense snow peak topping the clouds, white and shimmering in the morning sun, but as we drew nearer it changed in color to a dull gray as it rose from a foam-lashed bed and fell like a gigantic geyser, with a thundering noise. Knowing from experience the strange and dangerous antics these waterspouts sometimes cut, I kept my vessel on her course and passed the monster about a mile to windward. It was an awe-inspiring spectacle. I should judge this one must have risen to a height of five hundred feet, and was fully seventy-five feet in diameter. I have seen waterspouts before rise to a great height, but nothing approaching this one in diameter. Passengers and crew watched the strange sight for several hours, and it was still dancing and boiling and frothing and howling in its fury, and presenting to the view a marvel of glittering beauty as we left it behind the horizon."

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, WATCH." Jesus.

From our Contributors.

"Prepare to meet thy God."

C. W. CHADWICK.

THE common acceptance of the Scriptural injunction, "Prepare to meet thy God, O Israel," which is found in the fourth chapter of Amos, is crowned with anything but a halo of light. Rather does it suggest some harrowing death-bed scene, where a poor mortal is being coerced into tardy repentance, or tortured with the assurance of merited future punishment because he has not repented or perhaps subscribed to some particular creed or faith. It has been a weapon of fear in the hands of priest and layman to intimidate many a poor sinner who had not measured up to their standard of profession and piety. It has likewise been a popular slogan during revival seasons, where the same fear and dread of coming face to face with God has been instilled into the hearts of hungering mortals. So intimately associated with the thought of death has it been that most people have very naturally interpreted it, Prepare to die.

But why the fear and dread which it invariably occasions? Because one and all have united in the thought that this meeting with God is to take place only after death; more than this, they have been led to accept the awful uncertainty that perhaps the individual has not lived up to such a standard of righteousness here as to ever make possible his meeting with God in peace. What has been the result of such teaching? Fear, fear,—a shrinking from the thought of meeting God! No assurance of present reward, but much wonderment as to what the future may have in store for him. In this state of fear and ignorance the poor mortal opens his door to the invasion of every disease and discord known to earth, until the schoolmaster of experience finally causes him to question the soundness of a doctrine that would drive people into heaven through fear and death.

At this point Christian Science comes to the rescue of suffering humanity and practically interprets this all-important command of Scripture, "Prepare to meet thy God." It begins according to the natural order of things, to define the nature of this God they are to become acquainted with, and as the truth of His infinite love, goodness, and mercy, of His omnipotence and omnipresence unfolds, men begin to look to Him as an ever-present help in trouble; as the great Physician, who healeth all their diseases; as the loving Father, who is not willing that any of His children should perish, but that all should repent. They no longer think of death as a stepping-stone to heaven, but that God is "the God of the living," a God who is all Life, with whom they should acquaint themselves here and now and "be at peace." The Christ comes to them with a message of life, not of death; of love, not of hate, and this destroys fear and heals disease. They find the God of Jesus Christ to be a God of Life instead of death, and they no longer dread to meet Him; in other words, they have found the way to heaven now, which naturally relieves them of all anxiety concerning heaven

hereafter. Instead of preparing to die a noble death, the fear of which keeps them "all their lifetime subject to bondage," they begin to live a noble life here and now, by walking in the footsteps of Christ Jesus, and thus becoming stimulating and helpful to their fellow-men. They also learn the truth about man, which reveals him as the child of Spirit and therefore wholly spiritual, and in no sense identified with the king of terrors, "the last enemy that shall be destroyed."

Christian Science is a religion of the present, revealing and demonstrating an ever-present God who is all Life and Love, and man His image and likeness or ever-present reflection. The secret of its wonderful growth is this, that it teaches humanity how to know God, and how to live, now. It says to slumbering mortals, dreaming of an uncertain future life, "Awake to righteousness." No longer sin by believing that man has a dual nature, part mortal and part divine, and that the divine is an unobserved inhabitant of the mortal, which can escape from its supposed embodiment only through death; no longer sin by believing that man is unlike his Creator and therefore separated from Him by an iron-clad decree which cannot be annulled in this present life; no longer sin by believing that disease is sent by God to hasten a future-world reconciliation between man and his Maker; no longer sin by believing evil to be real and natural, while God, good, is unnatural and unknowable in this present world. It says, "Arise from the dead, and Christ shall give thee light" to-day. This light brings healing to mind and body, and human consciousness becomes obedient to the divine. God is found to be a present God, and not a God of the future. It becomes a pleasure to meet this God, and the closer we get to Him the happier we are and the more we know of the great ever-present to-day. Could we but learn to live in the present (this means a dying daily to sin) with a realizing sense of that Life which knows no death, everything unnatural would be eliminated from consciousness, and man's reconciliation with God would be proven a present possibility.

Learning the truth about God and man is the passport to heaven on earth; it is the secret of Christian healing, and individual experience proves it to be the teaching of Christ Jesus as recorded in Holy Writ. "Prepare to meet thy God" strikes no terror to the heart of the Christian Scientist. His God is good and he knows that he need not go somewhere to find Him. He has awakened sufficiently to realize that a belief in death has conspired more than anything else to separate him from a right understanding of God as being ever-present and all-powerful, and he knows now that God never placed such a barrier between Himself and His child. This scientific knowledge of man's true relationship to God displaces disease and mortality in human consciousness, and the result is a well and happy man, who strives to think only as God thinks. This man learns to live in the present by constantly overcoming every suggestion of sin, disease, and death that would separate him from a true sense of Life and its ever-harmonious expression. All the beauty and grandeur of earth and heaven are at hand, and God is in

the midst of them, a living, tangible presence. Then let us acquaint ourselves now with Him and prepare to live and love in the present. The poet Whittier has said,—

The Present, the Present is all thou hast
For thy sure possessing;
Like the patriarch's angel hold it fast
Till it gives its blessing.

Escape from Delusion.

EMILY H. REEVES.

A MINISTER said the other day, in speaking of Christian Science, "Our religion is exactly the same as the Christian Science religion, with the exception of the healing part." He also said, "I believe in mind-cure, but God does not do the healing." We may well ask, If God does not heal, who does then? Surely mortal man has no power of his own, apart from God, to heal the sick. We have been taught from childhood that God has all power, all knowledge or science, and is present everywhere. The word "all" certainly means complete, perfect, or whole, and must exclude everything unlike God. If we cannot accept this central fact of the Scriptures, we may as well reject the whole. If we do accept it, we must also accept the logical conclusion, which is taught in Christian Science, that if God is all, there can be no evil in reality, for if there were it would be a part of God. "Yes, but," says one, "we see evil all about us every day." Yes, and you will continue to see it, so long as you look for it and believe in its reality. As a man thinketh so is he, and "Evil be to him that evil thinks." It is not the physical body that is evil, for one could not do an evil deed without an evil thought to prompt it. The hand could not strike unless the mind prompted the action, as the body has no independent power, therefore all evil is a product of mortal mind. Mrs. Eddy teaches this in "Science and Health with Key to the Scriptures," and we have proved it to be true, and yet she is censured for declaring the truth. If our minds produced only good thoughts, how could we do evil deeds? Christ said, "There is nothing from without a man, that entering into him can defile him: but the things which come out of him, those are they that defile the man." There is no evil to the purely spiritual thought; but how many of us have reached the spiritual state wherein we may realize this truth? Evil seems very real indeed to the man who thinks it, but if we turn from evil and deny it, we grow more spiritual, and realize more and more the reality of good and the unreality of evil. When we turn from every evil thought, angels come and minister unto us. Paul says, "To be carnally minded is death; but to be spiritually minded is life and peace."

Christian Science teaches that sickness is no more a part of God's creation than is sin. We sometimes hear a person say, "It is God's will that I should be an invalid, and I must submit to His will," yet all the time that person is taking drugs in order to cure himself, and believing that there is a power, apart from God, in material things which will annul a law of God. If God sends sickness to us, it is decidedly wrong for us to try to get rid of it. God is infinite goodness; He made all that was made and pronounced it good—we all know this, therefore there can be nothing real and eternal but God and His creation. God being Spirit, His creation must be spiritual, not material, but those who are lost or asleep in materialism, cannot see the grandeur of Spirit or of spiritual creation. "The natural man receiveth not the things of the Spirit of God: for they are foolish unto him; neither can he know them, because they are spiritually discerned." As a man seeks spiritual joys he loses his false, material concept of the universe. Christ Jesus condemns materiality at every point and teaches us to turn from it. He said, "The flesh profiteth nothing."

Scholastic theology holds that we can find a scientific

cause for everything in material existence, yet teaches that God has no scientific law of eternal life. Does man live in accordance with law and order, and God in disorder? He who is omniscient would not be likely to make of eternal life a haphazard existence. The Bible says, "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." We are further told that we shall awake in His likeness. Does not this show us plainly that our material life has been a dream or delusion, in which everything is false and inharmonious because it is without God? Our mortal sense of life is only a dream, but it will seem real to us until we awaken. Adam ate the fruits of the tree of false knowledge which made him believe that there was a power, opposed to God, called evil. His descendants will awaken only as they grow weary of material beliefs, which bring no real pleasure. In our dreams, we see a friend, hear his voice, and feel the touch of his hand, when in reality he is not with us, but we do not realize our delusion until we awaken. We dream sometimes of a terrible monster in pursuit of us, we feel sensations of pain, and suddenly awaken to find ourselves safe and unharmed. Does not this prove how mortal mind may be misled? Even in our waking hours the senses deceive us,—they tell us that sky and ocean meet, that the sun revolves around the earth, and that the earth is flat, until the understanding corrects these errors and illusions. Here are cases, right in our every-day life, where we prove that what we see with our own eyes is not true.

He who is more willing to give good gifts to His children than is any earthly parent, surely has not forsaken His offspring. Christ is with us alway, even unto the end, ready to help us at any time if we but trust him. "The same yesterday, and to-day, and forever," but mortals have turned from God and are looking in the opposite direction for harmony. They are looking to material things for happiness and will never find it until thought turns to God, the real Life. "The kingdom of God is within you." It is not a place but a state of mind.

It has been asked, "Why must we study a science in order to be saved? are we not told to become as little children that we may enter the kingdom of heaven?" We are indeed told to become as little children,—that is, in humility and meekness; but Paul says, "Brethren, be not children in understanding." In Proverbs we read, "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding," and Jesus said, "Be ye therefore wise as serpents, and harmless as doves." In the Bible particular stress is laid on the word understanding. We must be wise, and we must also have understanding.

The critics of Christian Science should remember the injunction, "Prove all things; hold fast that which is good." In closing our eyes and heart to Christian Science, we close the door to the Christ who has come "in spirit and in truth" when we least expected him. Let us not be hasty in our condemnation, for it is written, "With what judgment ye judge, ye shall be judged."

Sincerity.

ALBERT ROE.

WE have the promise that God will withhold no good thing "from them that walk uprightly," but it is essential that we analyze our thought and be sure that we are sincerely striving to fulfil the prescribed conditions. The writer had an experience recently which, to him, was proof of the fulfilment of this great promise. A business enterprise had been entered upon which involved a comparatively large sum of money. The conditions had been fulfilled, but it had not been passed upon by those financing the enterprise and the payment was not made in the stipulated period. I dwelt upon the thought of the aforementioned text for a whole week, but without any seeming result.

On the following Monday the thought came, "If you were to receive this payment, and everything were not satisfactory, are you absolutely sure that you would stand any required expense to make it so?" I promptly replied, "Yes;" but the same thought came back continually, and this showed me where the trouble lay. After battling with this thought until Wednesday afternoon, Truth conquered, and my prayer for strength to do right was answered. Upon arrival at the office, Thursday morning, the check was there with the following note, "Although we have been unable to go into this matter we send you a check in full, thinking that perhaps you would like to have it, and knowing that you will make everything satisfactory to us." This showed me that if we are sincere in searching for the error in our thought and in overcoming it, not letting self-righteousness prevent us from acknowledging our shortcomings, but conquering them and thus proving their nothingness, we shall receive a divine reward. All forms of error are a temptation until overcome. In our consecration to follow in the footsteps of our Master with honesty of purpose, we express our gratitude and love to our Leader for her perseverance, self-sacrifice, and labor in giving to the world this practical truth, which is a veritable Science.

The Wednesday Evening Meeting.

LLOYD B. COATE.

WHAT can we say at the Wednesday evening meeting that will be of the greatest benefit? This simple question is of the utmost importance. Oftentimes, in listening to remarks made at these meetings by professing Christian Scientists, it would almost seem that they had lost sight of the real object of the meeting. It is not a place for people to create laughter by amusing stories or witty statements; it is not a place to speak disrespectfully of other church teachings, or of *materia medica*. If reference be made thereto, such remarks should always breathe a kind spirit, showing due consideration toward all who have done the best they knew, according to their light. It is not a place for one or two persons to monopolize the time, for every one who has been benefited by Christian Science should have opportunity and be prepared to speak a word of truth; it is not a place to speak of demonstrations which, however beautiful they may have been to us, are likely to be offensive to non-Scientists. It is a place to tell of practical benefits received through Christian Science in physical healing,—our restoration from sickness to health; it is a place to speak of the great reformatory work wrought in all our lives through Truth; it is a place to tell of the new birth, the awakening to a more spiritual life; it is a place to tell of the greater trust established in God, of the new opening of the Scriptures and our great joy in reading the same as interpreted by our text-book.

Surely we need wisdom to know what to say and how to say it. In the larger churches there are strangers present for the first time at almost every service, those who come to hear of instances of healing. The meeting is not for our selfish interest; but rather for those who have come seeking the truth, who want to find a way of escape from sickness and from sin. Jesus said, "What man is there of you, whom if his son ask bread, will he give him a stone?" This is a sacred place, and let us seriously, prayerfully consider how we are going to feed and comfort the needy stranger within our gates who may be in bondage to some form of sin or suffering. Before Jesus commanded the sheep to be fed, he said, "Feed my lambs."

I have heard of people who went away from these meetings unfavorably impressed because some had talked of being healed of such and such a "claim." "According to belief," they would say. "I had liver trouble," or some other trouble: they talk too much at random and at length of "mortal mind." These terms are proper, with the accom-

panying explanation given in our text-book, and we would do well to let each individual find the right use of such words and phrases therein. In speaking of our healing, would it not be better to talk in a plain, simple way which the stranger can comprehend? When we speak of things not appropriate we are not feeding the lambs.

Our text-book does not speak of diseases as purely imaginary, and for us to do so is not a correct presentation of Christian Science regarding sickness. It is not Christian Science to talk as though our healing was accomplished through will-power. Christian Science teaches that God is the great Physician, and that it is through Christ's plan of salvation that the healing is accomplished, and we should never forget to mention the spiritual as well as the physical betterment.

It is well known that a great deal of the work to be done by Publication Committees is in correcting misconceptions due to the indiscretion and mistakes of professing Christian Scientists. It therefore behooves all Christian Scientists to consider how they shall speak and act, both at the services and elsewhere.

No one needs a scholarly education, or to be an orator, in order to talk effectively at our meetings, for any one of fair intelligence can give simple, plain statements of benefits received. If our words express honesty, sincerity, and love, they will bring forth fruit in both health and righteousness.

Let us come prepared to tell of some blessing received, of some new, helpful sense of Truth attained, so that there may be no protracted silence, and each meeting will then prove interesting and profitable to all. If the true worth of the Wednesday evening meeting were appreciated, loyal Christian Scientists would not listen to the subtle argument to remain at home. They would awaken to the duty to be performed, and by their presence and with their words of encouragement would assist in making the meeting a blessing to all.

Hospitality.

L. E. D.

Use hospitality one to another without grudging.—1 PETER, 4:9.

THIS passage of Scripture has often helped me in regard to our Wednesday evening meetings. We all know what it means to be hospitable in a social way. We take pleasure in bringing out the best we have for our guests, and we would not think it was hospitality to do it grudgingly. Can we, then, do less with the spiritual food that is ours through the teachings of Christian Science? All who come to the experience meetings are the guests of the members. We want them to come, and should we not set before them our very best when they do so? None should go empty away; whatever their need, physically or spiritually, in our church there is enough to give if we do not allow error in any way to hinder us from giving it. We should earnestly strive to overcome the error that keeps us from making due preparation to supply this need.

There is another way in which we can be hospitable. All who present themselves to us, whether in person or only in our thought, are for the time the guests of our mentality, and we have the privilege of giving them the most loving thought we have. Our beloved Leader is constantly and freely giving to us all; surely we can follow her loving example.

To men with God all things are possible, man plus God is to all practical purposes of the Divine will and requirements, of the Divine life—omnipotent as God Himself. This means, that with God all that a man ought to be, he can be, and all a man ought to do, he can do. This is the gospel that I bring to you.—SAMUEL CHADWICK.

Selected Articles.

The "Secret of Christian Science."

One of the distinguishing features of Christian Science is the fact that therein are to be found no secrets or mysteries, as is evidenced by the breadth of its individual application to the needs of all classes, and its intelligent employment—to the exclusion of sickness and sin—by the children as well as by their fathers and mothers.

No fair-minded person could possibly affirm that those interested in Christian Science are happy only because they expect relief and health at some indefinite future time, since a large majority of the acknowledged happy people professing Christian Science are so by reason of a complete recovery from the ravages of disease and sin, in which bondage many had been held for years, and with no earthly prospect of relief. The fact of such healing being accompanied by moral and spiritual regeneration shows in a degree the nature of this Christ-cure.

Subscribing to the tenets of the Christian Science church and attending its meetings does not constitute freedom from all the ills and worriments which attend upon the lives of those living in this day and age, but it is proved that conscientious observance and application of the teachings of Christ Jesus, as understood in Christian Science through the study of its text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, does provide a successful means of overcoming these difficulties, and gives to mankind promise of an ultimate freedom from all that is unlike good; a realization of the truth of Jesus' words, "the kingdom of God is within you."

H. CORNELL WILSON.
The Globe, New York.

The Optimism of Christian Science.

There is much comment upon the optimism, courage, and happiness of Christian Scientists, and for that reason it may be worth our while to consider the cause of these manifestations.

Fear is based upon a consciousness of imminent danger or prospective trouble. Said Paul, "Set your affection on things above, not on things on the earth." If our hope is placed on material things it is sure to be limited, for we are all well aware of their instability and mutability. Indeed, happiness does not depend upon the things of this world, and a little consideration will reveal the fact that there is quite as much sorrow among the wealthy and well-to-do classes as there is among those in more limited circumstances. Some of those who are rich in this world's goods are quite as unhappy in their anxiety concerning their investments as are the poorer classes on account of their destitution.

While it is thought by some that faith is quite out of the fashion now-a-days, and the more philosophical may scout the idea that confidence in the divine power has aught to do with the arrangement of our present affairs as well as our future destiny, Christian Scientists are demonstrating that one can be contented day by day,—be relieved in a large measure of the strain and anxiety which characterize the lives of most men.

If one is calm, fearless, and wise, he is quite capable of making his way in the world, for he knows how to proceed, and has the strength and courage needed therefor. However much mortal man may claim for himself, it is true that "Every good gift and every perfect gift is from above," that every intelligent idea emanates from the divine Mind, and that man is properly guided and sustained only in proportion as he relies understandingly upon God. Thanks to Christian Science, we are learning what the Prophet meant when he declared, "Thou wilt keep him in perfect peace, whose mind is stayed on thee."

A deep, comprehensive, and definite spiritual conscious-

ness of God, an understanding of what He is to man, why and how He upholds all things, why it is possible and probable that He will care for us under all circumstances,—an understanding of His very nature and essence as we are taught in Christian Science, convinces us of the absolute certainty of what we actually need, dispels all fear and anxiety and effects a sense of peace and harmony which the world cannot possibly give, and this is the secret of the happiness of Christian Scientists.

ALFRED FARLOW.
Boston Times.

There seems no just reason why the term Science may not most aptly be applied to that "knowledge" which can "verify" its claim to "exact observation and correct thinking" by the visible proof of healing the sick and reforming the sinner. This, however, is not the result of emotional supplication, nor of fanatical, blind faith, but rather the mental and spiritual application of divine law specifically applied to the need at hand, and the happy results of health and righteousness therefrom may be expected with the same reasonable assurance that the experienced mariner anticipates the safety of his distant harbor by reason of the careful nautical reckoning of his course and distance.

DAVID B. OGDEN.
Portland (Ore.) Telegram.

The great Master while on earth may have foreseen the possibilities of future sectarian conflict, and, as if to guard against the misunderstanding of his teachings, he established a standard by which all true Christians should be measured. He said, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

These remarkable words are quite too plainly stated to be misunderstood. Uttered as they were, just prior to his final ascension, they would seem to represent a last rich legacy, bequeathed to the human race as the result of his earthly experience.

RICHARD P. VERRALL.
Glens Falls (N. Y.) Times.

In one place in his sermon the preacher [whose remarks are reported in the *Journal*] has said that drug physicians may learn some useful things from Christian Science. In another place he says that Christian Science may be good "for persons who are not very sick," and in yet another he says, "The power of mind over body is almost unlimited." He claims that God may cure diseases in answer to prayer, with or without medicine, according to "His gracious will." Here is a medley of self-contradictions. If drug physicians can learn anything useful from Christian Science, it is not to help "persons who are not very sick." If it be God's gracious will that a patient shall get well without medicine, in answer to prayer, can it make any difference to God whether the patient is or is not "very sick"? Does the preacher really think that God diagnoses the cases and then decides that some cases can be cured by prayer only, some even by Christian Science prayers; that some of them are so bad that drugs must be called in to aid Deity, and that some are so hopelessly bad that both Deity and drugs must abandon them as incurable? In view of this medley, surely it is just to inquire of our critic which he depends upon as the safest and surest, pill or prayer, drug or Deity.

CLARENCE A. BUSKIRK.
Fort Wayne (Ind.) Journal.

Truth we both of us seek; those in life's strenuous action,
I in the heart, and so each his desire attains.
From without, the eye, if healthy, regards the Creator,
And beholds within, as in a mirror, the heart.—SCHILLER.

Communion Lesson-Sermon of The Mother Church.

In response to many requests we publish the special Lesson-Sermon prepared for The Mother Church and used June 11. The Lesson-Sermon for the Communion service in the branch churches will be found in the *Christian Science Quarterly* under date of July 9.—Ed.

Subject: "ALL THINGS WHATSOEVER YE WOULD THAT MEN SHOULD DO TO YOU, DO YE."

Golden Text: "Love worketh no ill to his neighbor: therefore love is the fulfilling of the law." Romans, 13 : 10.

Responsive Reading:—Matthew, 5 : 38-48.

- 38 Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth:
- 39 But I say unto you, That ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also.
- 40 And if any man will sue thee at the law, and take away thy coat, let him have *thy* cloke also.
- 41 And whosoever shall compel thee to go a mile, go with him twain.
- 42 Give to him that asketh thee, and from him that would borrow of thee turn not thou away.
- 43 Ye have heard that it hath been said, Thou shalt love thy neighbor, and hate thine enemy.
- 44 But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you;
- 45 That ye may be the children of your Father which is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust.
- 46 For if ye love them which love you, what reward have ye? do not even the publicans the same?
- 47 And if ye salute your brethren only, what do ye more *than others?* do not even the publicans so?
- 48 Be ye therefore perfect, even as your Father which is in heaven is perfect.

The Lectures.

Horton, Kan.

A lecture on Christian Science was delivered here by Judge Septimus J. Hanna, April 27. The lecturer was introduced by Hon. W. E. Archer, President of the Kansas Conferences, of the Epworth League, Atchison District. He said in part,—

We do not all come as Christian Scientists, but we do come, I trust, lifting ourselves above our creeds, to join as one great band for the advancement, enlightenment, and spiritual progress of our community. The Church, and not the creed, is the anchor of our race, and we welcome with delight all persons who contribute to its influence and success, and who endeavor to impress upon the hearts of men the measures of Divine truth regardless of forms and prescriptions. In all the avocations of life there have been those who have achieved renown and pressed the cup of self-satisfaction to their lips again and again, but he who never administered to the ills of humanity, or carried the light of hope into the gloom of a soul's despair, has never drunk at the fountains of true joy.

As the rain from heaven waters the forest,—giant oak and shrub alike,—so those engaged in this service have something of value to give to both the strong and the weak.

The great business world of to-day is searching for captains of industry but the Church is looking for captains of Christianity, captains of faith, captains of hope. We have such a person with us at this time, whose fame has preceded him, and I have the pleasure of presenting to you the speaker of the evening.—*Correspondence.*

Dallas, Tex.

Edward A. Kimball of Chicago delivered a lecture last night [May 4] at the Dallas Opera House and the parquet was comfortably filled. The lecturer was introduced by Judge J. J. Eckford, who said in part,—

New England, the home of the Discoverer and Founder of Christian Science, has much in her past achievements and history of which to be proud, but in future years her greatest pride and joy will be that her rock-ribbed shores cradled one with thought so pure as to give to the world Christian Science. The progress of Christian Science is the marvel and wonder of our age, for it is not quite forty years since Mrs. Eddy published it to the world, and to-day it has spread to every land, its churches are filled with a happy and contented people and are vocal with thanksgiving and praise. Why this rapid growth? The explanation is simple. It answers the Scriptural test, "By their fruits ye shall know them," as well as the critical demands of these intellectual times, for with its indisputable proofs it silences the skeptic's sneer and tears from the agnostic's brow the specious mask, "I don't know."

Dallas Times Herald.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Another Point of View.

ACCORDING to the report of the recent annual meeting of the Louisiana State Medical Society, considerable time was devoted to plans for securing restrictive legislation designed to place the healing of the sick under the exclusive control of the medical profession. The discussion of the subject was from a purely partisan standpoint, and this was to be expected; but it seems inconceivable that any one should have the hardihood to publicly advocate a descent to the low plane of "practical politics," in order to secure legislation upon this or any other subject.

The following is the New Orleans *Picayune's* report of the remarks of one of the members of the Society:—

"Dr. J. M. Barrier thought the thing to do would be to bring this down to an issue and make it a practical question, so the average politician can get hold of it. Say to the legislator, while at home: 'We want certain things; you want certain things; if not right now, later. Give us what we want; you can have what you want.' Tell him that if he don't do it, that we'll do him a plenty the next time he runs for the Legislature. That is the way to handle them. You will find them very amenable to treatment."

As Doctor Barrier was not rebuked by his fellow-members, we must assume that the plan proposed by him met with their approval, and it therefore becomes legitimate to analyze this method of securing legislation, and to point to its possible results. In the first place, his assumption is that the candidates, one and all, are so eager for office that they will promise anything necessary to secure votes. On the other hand, there is the intimation that the physicians of the State are willing to support any candidate who will agree to give them the monopoly they covet, no matter what his views on other subjects may be.

If such bargains are to be made between legislators and those who wish to secure legislation which will give them a business monopoly, what safety is there for the rights of the public, and are not those who advocate such methods enemies of the State. We cannot believe that the laws of Louisiana are made by such men as this doctor has in mind, therefore his words can be understood only as a gratuitous insult to the members of the Legislature.

ARCHIBALD McLELLAN.

The Ideal Ministry.

SAID a clergyman who had recently been retired from the active ministry: "I never felt so competent to preach the gospel as I do now. In my apprehension of spiritual truth, my faith in its saving power, my knowledge of human needs, my experience in ministering to them, and my singleness of desire to do this work, I am better equipped than ever before; and yet, having reached that time of life when it is generally thought that a man's attracting power begins to wane, I find that the churches prefer a younger man, and I am laid aside with nothing to do but look forward to old age."

This pathetic case might be cited by some in confirmation of the much-discussed theory of Doctor Osler, that men

have exhausted their effective resources at forty; but in fact it illustrates not the correctness of this theory, but the lamentable outcome of an erroneous sense of the true functions of the Christian ministry. It indicates that strenuousness and personal magnetism are taking an unwarranted part in settling the question of clerical fitness, and that the Greek saying, "The gods do not endow men with wisdom until their youth has been withdrawn," is fading from mortal memory.

All the world knows that the price of ripened experience is above rubies, and it would not be undervalued in ministers were it not for the emasculation of their office and influence which has resulted from centuries of educated indifference to one of the two great duties assigned them by the Master when he said to his disciples, "Preach the gospel, heal the sick." Failure to accept the full privileges and meet the full responsibilities of discipleship always conduces to failure of success. In this instance, it has not only reduced the usefulness of the ministry to a minimum, but it has led the people into the habit of allowing the question of culture and personal attractiveness, rather than that of spiritual efficiency, to determine their choice.—a habit which is degrading to the individual and demoralizing to the Church.

It is apparent that if all ministers looked upon spiritual healing as a distinctive and essential part of their work, and were endeavoring to attain that spiritual mindedness which alone can equip them for it, they would be far more highly honored before men, while the good they might do would be increased a thousand-fold. They would no longer be compelled, as they are now, even in the early years of their ministry, to look forward to the speedy approach of an enforced desuetude. Both the requirements of their service and the expectation of those who look to them for aid would ever impel to the acquisition of richer gifts for a life-long ministry, and they would thus secure that nobler stimulus which their humanity surely needs, and of which they have been most unjustly deprived. They would, moreover, recover and constantly apply the only reliable test of the correctness of their understanding of the Master's teaching, and reach that scientific basis of assurance which saves from the distracting fallacies and profitless confusions of human opinion. Further, they would escape from their present discouraging difficulties in reaching the people. Their value would no longer be determined by their youth, oratorical power, conventional culture, or personal address, but by their ability to help in times of need. The sick of body and of mind long for a man who is after God's fashioning, not the world's. The universal need of healing became for our Lord, as it becomes for all who follow his example, the one ever-open door of approach to humanity, and the history of the Christian Science movement has abundantly demonstrated the fact that spiritual truth is never received so readily, nor held so tenaciously, as it is by those for whom its healing power has been demonstrated in their own experience or that of their immediate friends. As in past times, so to-day, the "knowing in whom they have believed" enables men to be true, to stand for conviction, and patiently to return kindness for ridicule and injury, and it is this staying quality of the faith that is grounded on demonstrated truth, which insures satisfying results in religious work.

These are some of the many advantages which would accrue to ministers of the gospel were they to learn also the Christ-method of healing the sick, and the gains for the people would be no less blessed and abundant. The preacher's practical proof of the truth of his teaching gives it an authority which commands the respect of all who hear, the obedience of all who are truly longing for the spiritual life. Further, as the people learn that the Christ-truth is practically available, and adequate to every demand of human experience, they begin to utilize it, and thus enter into an entirely new sense of freedom. Spiritual consciousness begins to assert its sovereignty, and in time of need they turn with sweet naturalness and confident expectancy to God

and to their spiritual adviser. Their sense of the compass and significance of Christian ministry has been very greatly enlarged and exalted, and they steadily grow into that conscious dependence upon Truth which begets intelligent and continuous self-assertion against error and for good. The result is a blessed multiplication of the number of those who are "workers together with God." The parent becomes for his children and neighbors what his minister has become to him, a prophet and a physician, and the true Christian propaganda is thus advanced.

Christian Science declares for this higher, more practical concept of Christian ministry. It insists that every preacher of the gospel shall repeat the Master's works and enter into his continuing joy. Recognizing that all efficiency is of God, Truth, alone, it would sweep away conventional limitations, and secure for every disciple that larger liberty and that ever-increasing usefulness which is in keeping with his progressive awakening to the nature, the freedom, and the power of the sons of God.

JOHN B. WILLIS.

Scientific Accuracy.

THERE are few who question that physical science, so-called, has rendered its best service to the world in encouraging a scientific habit of thought,—in teaching the necessity for the careful examination of all evidence submitted, and in requiring accuracy of statement. Those who accept Christian Science soon learn that no less accuracy is demanded in the study and demonstration of this vast subject which introduces the learner to the realm of infinite Mind, its phenomena and laws. St. Paul says, "When I was a child I spake as a child, . . . I thought as a child: but when I became a man, I put away childish things." The student of Christian Science may look back to the time when, in child-like ignorance, he thought and spake of materiality as if it were real and intelligible; later, when he had become acquainted with the Truth of being, he put away his false and unsatisfying concepts. He found that it was necessary to acquire scientific, and therefore accurate habits of thought and expression, and learned to measure another's degree of understanding by the clearness of his statements as well as by his demonstrations in living the truth.

In many instances, however, old beliefs seek expression, showing that they have not been wholly "put away," replaced by the truth about God and man. One of the most tenacious of these errors is the universal belief of mortal mind in the fall of man. Students of Christian Science would be startled were they charged with holding any such theory, but it is surprising how often incorrect statements are made by them, especially when they attempt to employ illustrations which are drawn from the physical world, or any of its phenomena. They try to explain that things which do *not* express divine Principle were once all right, but are now all wrong, and that the all-rightness may be restored by claiming rightness for it. Such a belief will not bear analysis, and it is not in line with the teachings of our text-book, which sets forth Christian Science scientifically,—with such discrimination of statement that inaccuracy on the part of the learner is without excuse. In divine Science it is never less than perfect Principle expressed in perfect idea,—perfect God and a perfect creation, including man. Christian Science teaches that the divine Mind is eternally conscious of perfection and nothing less. God's man is His reflection, and since God has never lost an iota of His perfection, man, as God's reflection, can never have fallen. Purity is eternally pure, goodness eternally good, Love is never other than loving and lovable.

It would be well for all who attempt to speak or write on this subject to study carefully the statements found on page 476, of Science and Health, especially lines 14 to 18, and 32 to 4 next page. This will aid in correcting the too

common error of thought, that it is possible to see the perfect man in the imperfect, or God's likeness in mortality. Science reveals none other than the true man who is the likeness of Spirit.

The importance of a correct scientific sense, and its no less correct statement, cannot be overestimated. We should always remember that we are called upon to prove to the world that Christian Science is truly scientific, and this we cannot do so long as we use unscientific statements which indicate an imperfect understanding of the subject. Above all things, the vanity which would claim the spirit of Christian Science while manifesting ignorance of the letter, is to be avoided. We need both, and of their union it may well be said, What God hath joined together, let not man put asunder.

ANNIE M. KNOTT.

Letters to our Leader.

Washington, D. C., May 26, 1905.

Mrs. Mary Baker Eddy, Pleasant View.

Beloved Leader:—I thought it might interest you to read the following testimony of appreciation of "Science and Health with Key to the Scriptures," by Senator Moses E. Clapp of Minnesota. You may not know that when the bill for regulating the practice of medicine in Indian Territory came before Congress last year, it had already passed the House of Representatives. When the students in this Field became aware of its menace to our Cause, they framed an amendment, which was offered and advocated by Senator Clapp, not because he knew anything of Christian Science, but simply as an act of justice to its believers. The bill passed the Senate as amended, and favorable action in the House was also obtained. About three months ago the Senator sought treatment from Christian Science, and he expresses himself as more than satisfied with results.

With sincere affection and loyalty,

ELIZABETH C. WICKERSHAM.

The following testimony was given by Hon. Moses E. Clapp, United States Senator from Minnesota, at the Wednesday evening meeting of First Church of Christ, Scientist, Washington, D. C., May 24, 1905:—

While I could not speak on the score of membership or as one claiming to be a Christian Scientist, my faith in Christian Science is sufficient to warrant me in saying a word this evening.

If I had sat in this church a year or two ago, and had listened to the statements of cures I have heard here this evening, I certainly could not have believed them to be true. From the standpoint of my experience then, they would have seemed absolutely impossible, and I do not wonder that people who know nothing of this Science discredit the statements we so often make and so often hear concerning cures. As some of you know, a short time ago I sought Christian Science for physical troubles, and met with such wonderful success that I determined to pursue it for another ailment which I had been led to believe was beyond any power to heal, and the success with it leads me to believe that with this also there will be an absolute and complete cure. But it is not so much of physical cures that I want to speak to-night.

When I sought Christian Science it was probably as ninety-nine out of every hundred seek it, with very little faith, with some little hope, but with the idea that whatever there was to be gained in it could be gained by going to a practitioner, taking the treatment, and then going about my business, letting Science alone until I again needed treatment. But experience has taught me that Christian Science differs in one radical respect from all schools of medicine. While in other schools the less you take of it the better, in this Science the more you take of it the better,—in other words, while you may be treated in this offhand

and distant way, regarding Science and its practitioner only as you would any ordinary physician, to get all its benefit, even from a physical standpoint, you want to get all you can of the Science. Slow as my progress has been (and confessedly it has been slow), I have seen enough of it to realize that, aside from physical healing (which is so much emphasized, and which I think the world outside regards as the basic feature of the Christian Science movement), there comes to the honest student and investigator something beyond the physical healing,—a peace, a comfort, a calm, a sense of security that one never felt until this investigation was entered upon.

As a word of encouragement to others, perhaps, I want to express another thought; namely, that in this investigation, slow and laborious as it is to some of us, the great thing, the great agent, the great force, is that most wonderful of books, Science and Health. It was with reluctance, I confess, that I secured a copy of this book. While taking the treatment the suggestion was made from day to day, "You ought to get that book," and from day to day promises were made and broken concerning its purchase; but finally I did get it, and it seemed like a perfect jumble of high-sounding but meaningless expressions and phrases, a throwing together of words that were quite unintelligible; but as the study of this book progressed there came, slowly but surely, ever and anon, the truth, the spiritual understanding, and one truth led to the unfoldment of another truth. In this connection I want to say that, to my mind, next to the Bible, Science and Health is the most wonderful book that was ever penned. It is a marvel to me how, week in and week out, month in and month out, year in and year out, lessons can be culled from the Bible and these lessons illustrated and exemplified from the pages of this wonderful book. It is marvelous how any human mind could have conceived it. In the unfolding of the spiritual truths and lessons of the Bible it is of value beyond estimate, to those who are seeking either the mere physical relief afforded by Science, or the higher spiritual truths which it teaches.

It is with the thought that perhaps these words might encourage some one who was relying too much upon the relation of patient to practitioner for the aid to be secured by Christian Science, that possibly in these few feeble suggestions they might find encouragement to proceed to the investigation of its teaching, to the study, through Science and Health, of the wonderful truths which it unfolds, that I give this testimony.

Los Angeles, Cal., June 3, 1905.

Dear Mrs. Eddy:—May I add this letter to the many which you receive daily, in loving acknowledgment of what your labor has done for poor, suffering humanity? Healed of consumption of the bowels by reading your works, is it any wonder that I want to thank you? I feel to-day that an expression of gratitude will ease my longing heart. I had a field of work in my old home in Cleveland, but my mother's pleading caused me to go to California. Here in Los Angeles I find the work progressing most wonderfully. I want to tell you how much strength I have received in this most trying hour by reading my precious little book, Science and Health. I thank you every day. I thank God for having brought me to Science, and pray that I may prove a faithful worker in God's vineyard, when He cometh to make up His jewels.

Sincere love and gratitude from your student's student,
ELIZABETH HEISNER.

Dresden, Germany, June 18, 1905.

Mrs. Eddy, Concord, N. H.:—First Church of Christ, Scientist, Dresden, on the occasion of opening new chapel send message of gratitude to you, whose selfless love has given the world the saving truth.

ANNA THILO, Clerk.

Testimonies of Healing.

The following testimonial originally appeared in the *Sentinel* of January 31, 1901, at which time Mrs. Anders was living in Salem, Ore. The issue of that number is now entirely exhausted, and in view of the frequent request received for information regarding the healing of cancer through Christian Science treatment, we republish the testimony, along with a recent letter from Mrs. Anders, giving further information regarding her healing, etc. This is one of the cases referred to on pages 137, 138 of the *Journal* for May, 1905.—Ed.

On the Fourth of July, eight years ago, I was lying in the hospital in Baltimore, Md., in charge of the doctors, and suffering from a cancerous growth on my breast and under my arm. On this Fourth of July, 1900,—I tell it with joy,—I am free of all doctors, free of all drugs, free of all medical care.

About four years ago, when on my return from San Francisco to Salem, I asked a lady in the car to raise the window for me, which she kindly did; she then asked me what was the matter with my arm. I told her. She asked me if I had ever tried Christian Science. I told her I had never heard of it before, but the name of Christian Science sounded very beautiful to me, and I should like to know something about it. She then told me of her mother, who had been an invalid and was confined to her bed for eight years. She was pronounced incurable by several doctors and given up to die. As a last resort a Christian Scientist was sent for, and with one week's treatment her mother was restored to perfect health. It had been five years since her mother was healed, and they had not employed a doctor since.

The very moment that lady named Christian Science, I knew it was what I was looking for; I could not grasp it quickly enough. While she was repeating the story of her mother, the thought came to me very forcibly, "There is help coming to me, for God is no respecter of persons. If He heard her mother's cries He will hear mine also." The thought of help coming to me never left me, so great was my faith in the ever-loving Father. A short time afterward I read "Science and Health with Key to the Scriptures," and was perfectly healed without a single treatment.

About one month ago I received a letter from Doctor H., surgeon-in-chief of the Johns Hopkins Hospital, Baltimore, Md., where I was a patient eight years ago. He desired to know how I was getting along. He said, "If you are not able to write yourself, ask your physician to write for you." But thanks be to God who has given me the power and the strength to do my own writing, even without the aid of glasses. I was sixty-seven years old January last, and wore glasses constantly from the age of fourteen up to a few months ago. Since then I have done all my reading, writing, and sewing without glasses. My heart is overflowing with love to God that I have been healed by the truth and am gaining the light of Christian Science.

I cannot tell the number of physicians at the hospital who pronounced me incurable and a cripple for life. Before leaving the hospital, the head nurse referred me to the best so-called surgical doctor in the house. I asked him if he thought I would recover. He shook his head, saying, "Your age is against you." I then asked if he thought I would have the use of my arm again. He placed his hand on the top of his head, and said, "You will never do this." The day I was healed the first thing I did was to throw my arm over the top of my head. My arm has been in a normal condition ever since, and my health is perfect.

Had I known of Christian Science before I went to the hospital I never would have submitted to the knife. For four long years after passing through this severe surgical operation, I suffered intense agony day and night. I went

to bed every night with a pillow under my arm, but did not know what it was to have one restful night. While my friends were sleeping around me, I was walking the floor, or on my bended knees asking God to relieve me of my suffering. I used to think I prayed as earnestly as others did, and thought my prayers were acceptable unto God, and sometimes I wondered why God did not hear the prayer of His humble child, for I was willing to sacrifice everything to get relief, but I lacked the understanding that God has given me through Christian Science. I cannot express my gratitude to our dear Leader for the light of Christian Science. I shall try to work more earnestly for our glorious Cause in the future than I ever have in the past. My greatest desire and my prayer is that my life may be a shining light for the glory of God.

MRS. A. J. ANDERS, Salem, Ore.

I am constantly receiving letters from different parts of the United States, asking me if it is true that I was healed through Christian Science of cancer on my breast and under my arm. I have answered over and over again, Yes, it is absolutely true; I was instantaneously healed through the great love of God, and by reading our text-book Science and Health, written by Mrs. Eddy, and to-day I stand as a living witness to the power of Truth revealed in Christian Science and the great healing power of almighty divine Love. It has been proven to me in various ways that Christian Science is the religion of Christ Jesus. The day I was healed, the very moment that I passed my arm over the top of my head, all the pain and suffering of that dread disease, cancer, ceased, never to return again. I had gone to bed every night with a pillow under my arm, and at the time I was healed my breast was in the same raw condition that it was when I left the hospital, and some more lumps had formed on it. There is nothing too great for God to do, and this was manifested to Moses. What God cannot do, no man need try to do. God can heal the sick and raise the dead, and He healed me. I cannot feel grateful enough for what Christian Science and the great love of God is doing for me every day. Christian Science has lifted me out of a world of sorrow and affliction, into a world of health and happiness. It has taught me to love if others hate. To me it is the most beautiful of all that is beautiful in this world; when the clouds of error gather around us, we know to whom we can go, and when we go to God with true, loving hearts, how quickly God's holiness and His protecting arm will save us. The light of divine Love that never grows dim will disperse the darkest clouds and will guide us to a haven of rest.

MRS. A. J. ANDERS, present address, Baltimore, Md.
May 31, 1905.

After suffering from stomach trouble for ten years, I became interested in Christian Science. At first I would have terrible pain for about a week at a time, then it would leave me for a few weeks, only to return again. The last year the pain became more frequent, until finally I could sleep neither day nor night, although I was taking powerful medicine and plenty of whiskey to deaden the pain, but it did me no good, and I gave up all hope of ever getting well. In my terrible suffering I even thought of suicide, but the stronger thought, What would become of my wife? stayed my hand. In despair I prayed to God to show me a way to get well. The very next day a gentleman saw how I was suffering, and asked what the trouble was. I told him. He said there was help for me, and told me of Christian Science. Not knowing what it was, I asked some friends about it, and they told me it was a humbug. Going home, I told my wife of it, but she thought the doctor I had should be given more time. In a few days, becoming much worse, I made up my mind to go to a Christian Science practitioner. I could hardly walk from the car to his office, but after a treatment, a sense of peace came over me. From that

day on I steadily improved, and I read Science and Health right along. When the pain was too intense, my wife would read to me. In two weeks I was entirely healed, but went to the practitioner for awhile longer, as I wanted to know more about this great healing power to which I owed my life. In one month I gained eighteen pounds, and grew strong again.

A few months later, I had another demonstration of the power of Christian Science to heal, being cured of bone disease in the shoulder-blade, for which I had had several operations, and one half of my shoulder-blade removed. After each operation it always relapsed to the old condition, but when it next troubled me I had a few treatments instead of the knife, and now my arm is well and growing stronger all the time,—in fact, new bones are growing. It had all been brought on by a fall aboard ship. The bone was bruised but did not trouble me at the time. Four months later, when in Vancouver, B. C., I awoke one morning with terrible pain in my arm. I tried to work but could not move the arm. I was taken to a hospital, and after a fever of three weeks, during which I was unconscious, I came to my senses to find they had operated on my shoulder, and a special nurse was with me day and night to put cold solutions on it; it was swollen to a tremendous size. I was in the hospital eleven months, having one operation after another, as my strength would admit of it, until the doctor said he could do no more for me. Then I came to San Francisco, where another doctor twice operated on the shoulder-blade, removing part of it and scraping other bones. Then it would break out again, but Christian Science cured me. "Man's extremity is God's opportunity." Christian Science has made me a well and happy man. It is a help in my every-day life. I had never read the Bible since I was a schoolboy, but now the Bible and "Science and Health with Key to the Scriptures" are my daily companions.

Is it any wonder that I feel grateful to God, and to our dear Leader, Mrs. Eddy? Words fail to express my gratitude for all that Christian Science has done for me and mine.—O. N. LARSEN, San Francisco, Cal.

I would like to express my gratitude for what Christian Science has done for me. It has been two years since I first heard of Christian Science. My mother and I were going to California for our health, but we stopped in Walla Walla for a few days, and rented a room of a lady who was not a Scientist. I was suffering with very sore eyes, and my mother coughed nearly all the time. The doctors said she had consumption. The lady of whom we rented the room, said if she were mamma she would try Christian Science, because it was doing some wonderful works in Walla Walla. My mamma very readily consented, because she wanted something that could heal us; and the result was, I was healed of sore eyes in one night and my mother was healed in three treatments. She was also healed of asthma by reading the wondrous little book, Science and Health, for which we are very grateful. I am thirteen years old, and I have learned that God, good, does not create anything which is the opposite of Himself; and that there is health here as well as in California. I am grateful indeed to Mrs. Eddy for helping us into this truth.

MAUDE M. DEPARTEE, Walla Walla, Wash.

From early childhood I suffered from melancholy and extreme nervousness, also from weakness of the eyes said to be due to astigmatism in a very severe form. Different oculists informed me that I would always have to wear glasses. At the age of fourteen my melancholy took a decided turn for the worse. I cried and worried day in and day out; took no interest in the pleasure or pastimes of others, nor in the society of young people; indeed their

enthusiasm seemed to sadden and irritate me. I longed to die and at times I would lose all control of myself. I would fall on the floor and cry and scream in mental agony until something was given me to put me to sleep. Then I would make plans to take my life, but a better thought would always come, and I would cry out to the unknown God to save me. No help came for over seven years, and I gave up hope of ever being different. I expected either to go insane entirely or carry out my plans of suicide. One day, in the public library, I carelessly picked up a book which told of Christian Science. I took it home and read it. It set me to thinking pretty hard. I must look into this Christian Science, but I did not know how to go about it. I took the book back and was looking over other books, when one attracted my attention. It was "Science and Health with Key to the Scriptures" by Mrs. Eddy. It looked formidable, but I decided to read it so long as I intended to investigate Christian Science.

That night I read the first chapter, and felt calmer. Before I was half way through the book I was entirely healed. All the melancholy, the mental misery rolled away into the nothingness from which it had come. God had answered my prayer. At first I did not understand the book, but the understanding came after a little diligent study, and in about a week's time my glasses came off, to stay off. My sister, troubled for years with eczema on her face, took up Science and Health, and read the testimonies in the back part. A week or so after, we suddenly noticed that her face was clear, the skin soft as a baby's. She had not tried to study Science, but was healed by its saving presence in the atmosphere of our home. We have since made many demonstrations over disease, and for this we cannot be grateful enough to Mrs. Eddy, who has toiled with such love and patience all these years.

L. M. WEHRY, Cedar Rapids, Ia.

We often hear the expression, "Is life worth living?" To me it certainly was not, twelve months ago, for I was then suffering agony from inflammatory rheumatism in its worst form. I could not move a muscle in my whole body, which seemed to be swollen to twice its natural size. At the same time I had convulsions of the stomach, suffering intense misery at times. I did not think I could live through them, I was so low. I thought I would never be able to care for my children again. I was unable to nurse my baby, six weeks old. My friends stood by my bedside, expecting I would not be with them long, as most of the time I was delirious. My husband asked me which I wanted, a doctor or a Christian Scientist, and I told him I preferred a Christian Science practitioner, as I had witnessed a beautiful demonstration on my little girl a year before, and I thought I might receive help. I sent to the same practitioner who had brought my little daughter through. She came and stayed all night and I received immediate relief. She gave me a week's absent treatment, and in a week from the first treatment I was up and around with my family. Although I had not nursed my baby for over two weeks, the power of Truth to supply this need was declared, and in three days there was more food than the baby could use.

I am to-day in good health and doing all my own work for a family of six, besides three boarders. I can never be thankful enough for the truth which brought me safely through the storm of error, but the physical help was nothing, compared to the spiritual. I am now able to see the power of divine Love, and I can help my children as well as myself to overcome error. I can never be thankful enough to Mrs. Eddy for giving to the world the book, "Science and Health with Key to the Scriptures." My daily prayer to God is that I may live so close to Truth that error can never enter my thought.

MRS. ALMA DUTTAR, Devils Lake, N. D.

The blessings I have received in Christian Science have been many, more than I could tell or even remember. I cannot even properly express in words, my gratitude to God, or to our beloved Leader, and to all those who have patiently and lovingly labored to lead me from darkness to light. I feel that only by a constant effort to live this beautiful Christ-teaching can I express my gratitude. I have been healed of many things, among which are tonsillitis, catarrh, and measles; but the physical healing, though great, seems little in comparison to the peace, the joy, the deep contentment of knowing man's at-one-ment with God, —knowing that there is nothing to fear.

To any one who seems to be struggling against heavy odds,—sense-testimony which insists that loss, separation, pain, and death are real,—I would like to say, Do not be discouraged, but cling to Truth, and the light will come. "Weeping may endure for a night, but joy cometh in the morning." We never find anything but tears and bitterness in the darkness of error's night, but in the morning of spiritual revelation we see death as an impostor—a lie believed; we see that the dear ones whom we, in our ignorance, deemed dead, are and always were expressions of Life, held forever in the Mind that knows no death.

I have found that sometimes it is our hardest trials which force us out of the falsity of mortal belief and cause us to seek rest and peace outside of all that the world has to offer. The Master said, "Peace I leave with you, my peace I give unto you: not as the world giveth, give I unto you;" and we know that his promises are true.

MAMIE MOUSER, Portland, Ore.

While at the opening service of our beautiful new church, May 29, 1904, watching streams of people who entered the auditorium even after all seats were taken, memory went back over the years I have studied and endeavored to live Christian Science, and a desire came to write of my healing. In the fall of 1885 my attention was first called to the subject by an article in the daily press calling it mind cure, a fad that had come from Boston, concluding with, "Why might it not be possible that disease may be cured by mind?" Shortly after a neighbor gave me an address where treatments were given and advised a trial. At this time I was afflicted with what three doctors had called valvular heart trouble, and other minor diseases. They had warned me against being active, and the only remedy they prescribed was whiskey. They said that at best I could live only a few months longer. My husband was almost blind—one eye had been entirely destroyed by an accident, and the other had been all but useless from birth. We had a family of small children to support, with little promise of success. We seriously pondered the trying of the new method, and in January, 1886, I ventured to ask for treatment, resolved that nothing should come between me and my faith in the one true God. I was informed that this was not mind cure, but Christian Science. The interest and kindness shown one who had nothing to give in return, cleared away all my reluctance, and I had my first treatment.

The third day I wondered what this assurance of all good toward me was. The answer came with an abiding conviction: It is the re-appearance of Immanuel, God-with-us, as manifested by Jesus. My healing was slow, but complete, as an active and industrious life has proven. My husband has also had treatment, and his sight has improved sufficiently for him to earn a living for his family. Christian Science has proved a preventive of disease; our children grew up into manhood and womanhood, healthy and happy.

Many proofs of God's loving care have come to me and brought spiritual uplifting, and when eighteen months ago a great sorrow fell upon me, all was overcome by the blessed understanding gained in this Science. I could truthfully say to one who had bitterly condemned Christian Science, "I

am grateful for it, thankful for the knowledge that there is no death, for the church and its associations, and the spiritual help in time of need." I could also comprehend in a measure the significance of the stand taken by our loved Leader, Mrs. Eddy, in giving to the world "Science and Health with Key to the Scriptures," and what this means to us all.

MRS. KATHERINE BIGLER, Denver, Col.

I wish to express my gratitude for what Christian Science has done for me. It found me on an ocean of error, the waves of fear and despair rolling high. Then the "still, small voice" was wafted across the billows and was heard when darkness seemed to prevail. Thanks be to God, and to our loved Leader, Mrs. Eddy, the voice of Truth was heard and heeded, and I send this expression of love for my healing. There seemed to be a legion of ills that have been met and overcome by Truth. Among these were deafness, kidney and liver trouble, nervous prostration with headache, and an internal difficulty for which I had been treated by two leading specialists without any benefit. All these have vanished into their native nothingness, except the first mentioned, a slight trace of which remains, but I expect that Truth will erase every vestige of it.

I am truly grateful to God for the peace that has been restored in my household, and that a better financial outlook has been obtained. Truly "God is Love," and he that loveth is born of Him. I have found that Science and Health is a pearl of great price. God bless Mrs. Eddy in her great labor of love.

MRS. ROSA B. SHAY, Breckenridge, Mich.

It is now almost two years since I was healed through Christian Science treatment, and I feel it a pleasure to give this testimony for all the blessings I have received. I had been very sick for years, and suffered untold misery. I had a complication of diseases, pronounced incurable by a number of doctors here in Fort Dodge, as well as by some noted doctors in Chicago, where I went for treatment. I had gone through two severe operations without being benefited, but was in a worse condition than before, for I was left with constant pain in one of my limbs, and I could walk but very little. I had tried almost everything known to medical science, but I grew worse instead of better, and was completely discouraged when I sent for a Christian Scientist to come to my home and treat me. I will never forget the love and peace which she expressed, and the hopeful words she spoke to me. She told me I need not suffer, that God would heal me. God has healed me through Christian Science treatment. My limb was perfectly healed. I now do all my housework and walk anywhere I wish. I am indeed grateful for Christian Science. While the physical healing was wonderful, the understanding of the Bible, as revealed in Science and Health, is a still greater blessing.

MRS. MAUDE ANDERSON, Fort Dodge, Ia.

I first heard of Christian Science about three years ago, and since then I have had many demonstrations of the power of divine Love. I now take the opportunity of telling others what a joy Christian Science has been to me, trusting that some one may be helped and encouraged as I have been through reading the testimonies of others. Some time ago I had an attack of St. Vitus's dance which lasted over a fortnight. I tried to overcome it, but found that I needed a little help, so I went to a practitioner and asked for treatment and after each treatment I felt better. I never remained away from work, although my fingers were sometimes burned, owing to the continual motion of my body. The final treatment was on a Sunday, just after I came in from our service, and was feeling rather worse. I had thought that every one would be looking at me, as I could not sit still, and I felt quite excited over this. I took up our text-book, and while reading came to the text, "Thou

shalt have no other gods before me." As a higher sense of its meaning came to me, I was perfectly healed.

Another wonderful proof of God's allness was a case of instantaneous healing. I was taken ill one Saturday night at my work, and had to take an early train home and go off to bed. On Sunday morning I tried to get up, but fainted. Two other attempts were made with the same result. I then sent word to some one to take my place at the service as Second Reader, as I was unable to go. Later on, I was seized with a severe pain in the left side. My mother became very anxious and wanted to call in a doctor, but I refused to see him and asked her to send for a Christian Scientist who lived near. He came, and in about ten minutes the pain was gone. Then in the afternoon I became delirious and did not know any one. I was told afterwards that I had been constantly talking to those with whom I was associated in the workshop, and telling them of Christian Science. The practitioner called on his way from the evening service and found me in this state. I can remember that he asked the question, "Are you remembering that God is Love?" I regained consciousness for a little then, and I heard him saying, "I will read to you until you are well." I listened, and heard that beautiful passage from Science and Health where the testimony of Spirit is given (page 252). I then became perfectly clear and repeated the scientific statement of being (Science and Health, p. 468) along with him, and knew I was healed. I called my mother, who burst into tears of joy when she saw that I was well. I arose next morning and walked four and a half miles to my work, leaving home at six o'clock. I might mention that I had been attacked with great spitting of blood at this time, which, however, stopped at once. It was really a beautiful proof of the power of Truth which makes us free.

I have also been able to overcome ulcerated throat, toothache, and cold. I feel very grateful for all this, but the clearer thought of God and better understanding of the Bible give me more cause for thankfulness, as everything is so different to me now. We should indeed be humble and grateful for our knowledge of this blessed truth which has been revealed to us through our beloved leader, Mrs. Eddy. God grant that we be found faithful, ever trying to realize the presence of divine Love, and trusting Him to show us the way from matter to Spirit. How I sometimes wish I could say,—I am a Christian Scientist. I can at least say that I am trying to be one, and though sometimes I seem to come far short of living this life, I am not discouraged, but go forward with greater determination to be more faithful. The light is before us, and it is a beautiful thought that within the reach of all is heaven, harmony, life; and the peace of God which passeth all understanding.

R. McV. STEWART, Airdrie, Scotland.

I had been drifting along somewhat carelessly; had never had any severe ailments to meet, until one evening my father became very ill. It seemed that he had eaten too many ripe tomatoes, and this gave him great distress. Heart failure seemed to be the main trouble. I heard him groaning, and found him seemingly dying, with his head dropped forward. His eyes were set and the dew of death on his brow. No time was spared in declaring the truth. A grandson came running, a brother was also quickly summoned, and nieces came running to see father pass on, as they expected. One grandson remarked that he was getting better. A great fear was, however, manifested, owing to father's age, he being a man of eighty-four. The sickness and fear were entirely overcome, and he slept remarkably well during the night. Next morning he went to the breakfast table as usual and was able to work in the garden as he is accustomed to do.

I feel grateful to Mrs. Eddy for raising our mortal thought that we may be able to apprehend this saving truth.—MINNIE PERRY, Tippecanoe City, O.

From our Exchanges.

We have no sympathy with that sort of speculation which suggests that this penitent malefactor may after all have been a decent sort of fellow, and only incidentally a victim of the law. For all we know he may have been a hundred-fold more vicious and criminal than his impenitent companion. The gist of the episode lies in the fact that when he comes into close touch with the Infinite this man senses a Divine quality and responds. His wondering ears had heard the rejected of the people pray with unspeakable tenderness, "Father, forgive them," and declare with compassionate discernment, "they know not what they do." The thief dropped into the background; the man came forward in the consciousness and bowed in reverence before the humanity so divinely good. In the depths of his soul occurred that mystical, marvelous swing of the inmost volition by which we choose the best by some power greater than ourselves. This freedom to righteousness no scholar can define, and yet it is what saves man, what makes him the accomplished image and likeness of God, the spontaneous functioner of the life of heaven.—*New Church Messenger*.

In a certain passage Jesus represents his Jewish hearers as in a state of slavery from which he could make them free. They resented the idea of their enslavement, thinking only of their physical condition, not even taking into consideration their political subjection to the Romans.

But Jesus proceeds to show them that he has in mind their slavery in a moral sense and that in the committal of sin they were involved in its power. This is a more subtle form of slavery, yet just as real as the yoke of physical bondage. It is not, however, realized in its beginnings, nor when it has fastened its fetters fully and finally upon the soul, on account of its deceptive character. The chains of moral slavery are not felt until they have produced results in some physical form of weakness or vice.

The Watchman.

Justice David J. Brewer, of the Supreme Court of the United States, in a recent address in a church gathering, said: "I sometimes see the papers calling for decisions against trusts, and I can but smile to think how futile all the larger part of such effort would be. The remedy is not in judicial decisions, but rests in the introduction into the hearts of the men of a nation of the spirit of the Golden Rule. That is one thing that is better than the 'big stick'; that is one thing that is better than iron-clads; better than executive action; better than decisions rendered or proclamation by the executive; that is the one thing that will take us through the dangers now about us and those that will come."

If the kingdom of God could really come in the American industrial world, the kingdom of peace and co-operation and love, Christianity would have won a victory beside which the historic conquest of any so-called heathen nation would pale in glory; and the man who worthily devotes himself to the effort to Christianize even one small section of modern business does as noble a work as he who gives his years and his talents to missionary service in India or Africa.—*The Congregationalist*.

Soon or late the soul must tabernacle in the thought of God. Worship in some form or other is the universal expression of the sensitive and developed soul. Eliminate the dogma out of it, fill it with all philosophy and poetry, art and wisdom, that you are capable of, and the sentence is increasingly true, "The heart of man crieth out for the living God."

JENKIN LLOYD JONES.
The Outlook.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of **SCIENCE AND HEALTH**, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in **SCIENCE AND HEALTH**. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to **JOSEPH ARMSTRONG**, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to **WILLIAM B. JOHNSON**, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to **STEPHEN A. CHASE**, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Works on Christian Science

Written by Rev. MARY BAKER G. EDDY

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid \$3 18

Two to twelve books (cloth only) to one address, each, prepaid 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Levant, divinity circuit, leather-lined, round corners, gilt edges, silk-sewed, heavy Oxford India Bible Paper, wide margins, each, prepaid 6 00
Twelve or more to one address, each, prepaid 5 75

Orders for Science and Health, in lots of twelve or more to one address, may include any or all the different styles of binding.

A COMPLETE CONCORDANCE to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid \$5 00
Twelve or more copies to one address, each 4 50

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, each, prepaid 4 00
Twelve or more to one address, each, prepaid 3 75

Levant, divinity circuit, leather-lined to edge, round corners, gilt edges, silk-sewed, each, prepaid 5 00
Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An Illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEER THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

National.

Secretary Taft does not agree with Attorney-General Moody in the decision made by the latter that the eight-hour law should apply to all labor employed by the Government or by contractors on the Panama Canal. The decision would mean an additional cost of millions of dollars in wages. Secretary Taft holds that the Canal Zone is not soil of the United States, that the jurisdiction is not in any sense equivalent to that of the sovereign territory of the United States, that while the United States Government may demand and exercise in the Canal Zone all powers that it might exercise in the United States, the obligations of the Government toward the individual on the Isthmus are not comparable to those established by the Constitution and the laws of the land to citizens of the United States at home. He therefore argues that to extend to foreign laborers who have no claim as citizens upon this Government the protection afforded by the eight-hour law in this country is unwarranted.

The Postmaster General has signed with Minister Obaldia of Panama a postal treaty between the two countries effective July 19, 1905, under which the rates and conditions applicable to articles for the republic of Panama are made uniform with those in force between the United States, Canada, Mexico, and Cuba. He also signed a parcels post convention with the commonwealth of Australia effective August 1. It provides for the exchange of parcels not exceeding four pounds six ounces in weight, and is substantially uniform with recent parcels post conventions concluded with Great Britain, Japan, and other countries.

The State Department has received a dispatch from the minister to Morocco, transmitting a request from the Government of Morocco that the United States participate in a conference upon the affairs of that country. The request is similar to that which has been sent to other Governments. American interests there are commercial, while European interests are political. The United States will accept the invitation provided the other Powers generally accept.

Arrangements are said to be making for a return race of the American fleet from England to the Sandy Hook lightship. The owners of the eight Yankee yachts in the recent competition are being canvassed for their consent to the race. No decision on the point will be given out for publication until after Emperor William has had an opportunity to meet the American owners at the Kiel entertainments. The Emperor's Meteor is likely to be in the race.

A library building costing \$500,000 has been presented to Vassar College. The library is built of granite, is 175 by 125 feet, with a tower 100 feet high, commanding a charming view of the Hudson and surrounding country. The library contains 125,000 volumes.

Investigation has shown the charges brought against Assistant Secretary of State Loomis by Minister Bowen, his successor at Caracas, Venezuela, to be gratuitous. Minister Bowen has been dismissed from the service for his undiplomatic course.

The good ship Roosevelt, in which Lieutenant Peary will soon start for the North Pole, had her trial trip in Portland Harbor last week. She is a powerful ship especially built to meet the severe demands of Arctic service and cost about \$100,000.

The American schooner yacht Atlantic, which recently won the ocean race for the Emperor's Cup, has won the race for auxiliary yachts from Dover to Heligoland. The annual race was won by the German schooner yacht Susanne.

It is expected that the value of imports for the present fiscal year will exceed that of last year by fifty million dollars. During the last fiscal year, ending June 30, 1904, the value of imports was nearly six hundred million dollars.

The corporation of the Massachusetts Institute of Technology has voted to accept the terms of alliance with Harvard University.

From June 1 to June 16 inclusive 245,382 persons had been admitted to the Lewis and Clark Exposition at Portland.

President Roosevelt has received from Clark University the degree of LL.D.

Foreign.

Notwithstanding the Government prohibition, the All-Russia Zemstvo Congress, the delegates to which included the mayors of twenty-five of the largest cities in the Empire, met in Moscow on June 6, and resolved with practical unanimity to demand the convocation of a Zemstvo Sobor and the submission to it of the question of peace or war. The sessions were held without interference on the part of the authorities. On the 20th the deputation appointed to address the Czar was received by him. The Zemstvoists were agreed that representation should not be according to classes; that nobody should be excluded on account of race or religion; that the Assembly should not be a patchwork addition to the present bureaucratic institutions, but an entirely new corporation, with distinct character and powers; that the press should be allowed complete freedom; that meetings should not be molested, and that personal freedom should be guaranteed.

The Czar replied and thanked them and assured them that a representative body would be created.

Two important meetings were held recently in Tientsin in connection with the anti-American propaganda. The meetings were attended by six hundred students, representing twenty-six colleges. Ten resolutions were passed, of which the most important were the following: To boycott American goods; to stimulate Chinese manufactures; to circulate anti-American literature and to record results. Other bodies, representing two hundred members from the commercial guilds of seventeen provinces, have signed an agreement to boycott American goods.

M. Toyama of Tokio, a member of the Roman Character Society of Japan, is in the United States. This society is a Government commission appointed to make a report on the advisability of the adoption of Roman characters in Japan. He says it is the belief of well-informed Japanese that within the next decade Chinese characters, which are now used in Japan, will be replaced by the less complicated Roman letters.

Industrial and Commercial.

A log raft containing ten million feet of spars and piling is to be towed across the Pacific to Shanghai during the summer. From present plans it will be towed by one or more powerful tugboats, accompanied by a collier or oil steamer with fuel for the tugs.

General.

It might seem that nothing could be less exposed to destruction than the massive monuments of ancient days known as Stonehenge, says *The Outlook*. It is supposed to be now nearly four thousand years since they were put in place, yet it appears in legal proceedings, which have just been going on in England, that Stonehenge needs protection from the injurious treatment to which it has been subjected. The great stones stand upon private property, and action in fencing them off has led to a lawsuit by English societies which exist for the purpose of protecting public rights in antiquities and in historical grounds. The owner asserts that he has been obliged to fence in Stonehenge, and also to provide for the expense of caring for it by charging a small fee, because not only of the excesses of tourists and others in chipping off portions of the stones for relics, but because in some instances serious injury has been done. The price asked has been \$750,000.

In the southern part of France, which borders on the Mediterranean and extends between the Alps and the Rhone, the culture of flowers has developed into a great industry for the manufacture of perfumes. Here are more than sixty factories, the total product of which is valued at more than four million dollars per year, and over fifteen hundred persons are constantly employed, without counting the harvest hands. The more important harvests are those of the rose, 4,000,000 pounds; the orange flower, 5,000,000 pounds; the violet, 600,000 pounds; the jasmine, 1,200,000 pounds; the tuberose, 300,000; the geranium, 70,000 pounds, and the cassia, 300,000. These flowers are weighed without their stems. In order to obtain two pounds of rose leaves no less than a thousand flowers are required, while a thousand bunches of violets, each with a diameter of more than a foot, furnish only forty pounds of flowers.

Patent sleeping bunks fitted on two cross-channel steamers have proved most satisfactory. By means of automatically working electrical brakes the bunk remains always level, no matter how badly the steamer may roll. India rubber springs and buffers so minimize the bunk's vibration that the motion felt is no more than that of a railway train.

One thousand three hundred and fifty Greek and Roman coins, the property of the late Harlan P. Smith of New York, were sold at Sotheby's, London, recently by auction and realized \$15,020. A Sicilian tetradrachm was sold for \$850.

Harvard House, the early home of the mother of John Harvard, founder of Harvard University, at Stratford-on-Avon, has been sold.

The power generated in a modern steamship in a single voyage across the Atlantic is enough to raise from the Nile and set in place every stone of one of the great pyramids.

In Zululand a valuable plumbago mine has been discovered, containing ninety-eight per cent of pure metal.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

To the Beginner.

BLANCHE H. HOGUE.

CHRISTIAN SCIENCE, in its divine ministration, offers all unfailing remedy to every mortal. Because it is in very nature and office remedial, its message is most heeded by those most sorely in need of help. With healing in its wings, it seeks the threshold of every heavy heart, and its entrance offers ultimate release from all the oppression of sin and its attendant suffering. Wherever Christian Science is welcomed, wherever its divine agency is sought and cherished, there begins at once a reconstruction of the thought and life. The man who is in trouble is shown a way of escape from his trouble, and if his love for righteousness exceed ever so little his desire for sin, or his fear of evil, he is inspired to begin under a new dispensation the practical working out of his salvation.

The one clear demand of Christian Science is that evil shall be overcome with good. The exponent of Christian Science may have much to say to others, by way of metaphysical analysis, but unless righteousness is dominating his daily living, his explanations are valueless. The Christian element is the vital element. The student who begins his investigation of Christian Science with this point clearly in view, has discerned the highway of salvation, and walks therein. The one who seeks Christian Science with selfish motives, struggles in the hedges and byways of selfish thinking, and fails to find the path of the redeemed until this selfishness so pierces itself that a purified nature appears. It must not be forgotten that the great Master said the meek shall inherit the earth. Many who cry out in protest because their individual healing is slow, or because the besetments of evil are not immediately silenced, may perhaps have their eyes upon the inheritance, and be overlooking the footsteps thereto. Christianity has always declared that the way of the cross is the way of salvation, and Christian Science offers no other way of deliverance than that demanded by Jesus when he said, "If any man will come after me, let him deny himself, and take up his cross daily, and follow me. For whosoever will save his life, shall lose it: but whosoever shall lose his life for my sake, the same shall save it."

Traditional Christianity has carried the cross while looking to a distant and far-away heaven for its crown. Christian Science adds to this hope the knowledge that, under the law of God, there is no interval between the sacrifice and the reward, and that the cross of selfless effort, rightly carried, crowns immediate experience with blessing. Righteousness not only inherits the kingdom of heaven, but meekness inherits the earth; and with the further acceptance of Jesus' statement, "The kingdom of God is within you," is it not reasonable to conclude that the inheritance of heaven can come here and now upon earth, when meekness has prepared a fitting place therefor? It is not an interval of time wherein to wait, but an amount of work to be done, which fits one for the reception of the heavenly heritage. And because there are no empty places in consciousness, inasmuch as consciousness must be conscious of

something, healing and gladness must flow into human lives just in the degree that ignorance and selfishness go out. The crown abides with the cross.

Jesus' parable of the sower indicates to the beginner the work he must do to make and keep his heart receptive to the word of Truth. If he would not have all that he reads, and hears, and sees fall by the wayside to be devoured, among thorns to be choked, or upon stony ground to find no root, he must give much time to self-examination. Prayer and watchfulness are indeed needed, that affliction or persecution shall not offend the young enthusiast, and that the cares of this world, and the deceitfulness of riches, and the lusts of other things entering in, choke not the Word. He who sees that his individual work is to stand guard over the condition of his own ground, surely cannot fail, in receiving seed, to "bring forth fruit, some thirtyfold, some sixty, and some an hundred."

What man can find fault with anything outside himself, when he remembers that the sower has only good seed to sow? And what man will quarrel with the quality of the seed when he learns that it is the stony ground, or the choking thorns, which cause the scanty harvesting?

Unquestionably the seed which God has scattered broadcast in His world, through the sacred utterances of the Bible, and the illuminated interpretation given thereto in the book "Science and Health with Key to the Scriptures," is good, all good. One man's failure to make his garden ready for the seed, need not stay another man from searching for the seed, nor from preparing his own land for its sowing. Again, if another man's harvest be fair and beautiful to look upon, should the beginner expend his energies in admiring that fruitage, in depending upon it, or in stealing from it? Rather should he be stimulated to seek the same good seed for himself: to overturn patiently his own stony ground, and to protect his growing Christliness from all devouring distractions and choking thorns.

Every word of Truth contained in the Bible and Science and Health was written for every man to hear and heed. Therefore, no man's failure should stay our search, and no other man's fair fields should suffice for us. The relationship of these two books to the individual is direct. The sower soweth the seed. God alone gives all good. The office of teacher or practitioner is fulfilled in discriminatingly sowing the seed. The experience of spiritual enlightenment is between man and his God, for God alone is Life and the source of all living and being. Because Jesus knew the truth about it all, he could say to the evil, "Come out of him, and enter no more into him." Thus he fulfilled his mission as mediator between God and man, thus multitudes were unfettered, set free to find their own. By this same process is every individual unfettered, in some degree, as the clear-eyed Christian Scientist strives to loose the inquirer from the bonds of erroneous thinking and direct him to the written word of God for his illumination and healing.

Let no beginner be persuaded that anything ever has been written or ever will be written upon the subject of Christian Science which is easier to understand than is Science and Health. A text-book upon any subject is fundamental and authoritative. It must naturally embody so much within its covers that an ordinary perusal reveals only a very small measure of what it contains. An essay

or an article about mathematics might be very readily comprehended, while a work upon mathematics which is sufficiently exhaustive to be considered a text-book, requires months and years of patient study and practice, that its teaching may be fully demonstrated. Science and Health is essentially a text-book, setting forth the Principle and rules for the practice of Scientific Christianity. So vast a theme cannot be understood save through persistent investigation and consistent obedience to its directions; but that its statements are understandable, from the first declaration to the ultimate conclusion, thousands upon thousands of the regenerated and healed of earth can testify. Therefore, let no one be beguiled into neglecting the text-book for the things which are written and said about the text-book. To the one who desires to understand, and who practises the little he has already learned, the statements of Science and Health are as clear as sunlight. Only the thought which purposely resists and misinterprets, can remain confused. "The meek shall inherit the earth."

Bringing the Children to Christ.

L. M.

The sparrow hath found an house, and the swallow a nest for herself, where she may lay her young, even thine altars, O Lord of hosts, my King, and my God.—PSALM 84:3.

It comes to me that perhaps some mother, struggling as I was to bring up the children wisely, may be helped by some little experiences which I have had. Soon after I began to apprehend what is meant by the unfolding of truth,—to see that it must be proven, step by step, in our daily lives, it came to me clearly, that in order to help the children to a greater measure of freedom I must know for them the fact of the one perfect Father-Mother, God. They had been left without an earthly father when they were respectively six, four, and two years old. My memory of their father was calm and sweet, and I often pointed out to friends how much each of the children resembled him, and how each child was like him in different ways. I was willing to separate them in thought from all sense of having a human mother, for I had never been especially satisfied with my own temperament, perhaps because it had given me too much trouble. The thought, however, of separating them from all sense of human parentage brought to me a downright rebellious sense—and such half-way work as I then did brought half-way results. No human character is perfect, nor anything like it, and as I saw one child reflecting abnormal fear; another developing a tendency to take cold easily; the third showing loss of control over inanimate things which went wrong; and when I heard relatives and friends (despite the sturdy little bodies, healthful color, and happy faces) prophesying for all three the development, some time, of the dread disease which the father had manifested, I saw clearly that it was time I should wake up and see how I was lending myself to the error of personality rather than obeying Principle. I saw that it was time I got to work, time to know for the children the absolute truth.

I turned to the Glossary of "Science and Health with Key to the Scriptures," and it was indeed a Key to me. I had never cared to read the Bible before I read our text-book, but this was all changed after I had entered upon its study. On this occasion I read carefully the definition of "children," as given on page 582, and I then knew that the Father-Mother of all the children is Spirit, God. I also realized, as never before, the meaning of the ninety-first Psalm. There have been few days since, in which I have not been able in thought to separate the children entirely from the belief of life in matter.

The sayings of Christ Jesus came home to my thought as never before: "Take heed that ye despise not one of these little ones; for I say unto you, That in heaven their angels

do always behold the face of my Father which is in heaven." "Call no man your father upon the earth: for one is your Father, which is in heaven." "Who is my mother? and who are my brethren?" Many blessings have come to the children in the making of this demonstration, and even more to me. The meaning of God as Father-Mother is clearer and He seems nearer; the meaning of man as "male and female" is nearer my comprehension than ever before, and I know better the import of the promise in Revelation, "There shall be no more curse: . . . And they shall see his face; and his name shall be in their foreheads." Best of all, I am ready to accept the teaching of our beloved Leader, respecting God's creation, which is given on page 69 of Science and Health.

Another lesson I learned more recently and it taught me to trust God, good, more. When the youngest of my three children came to know of Christian Science he was only four years old. His thought of it was very clear, and many of his little talks to me were very wonderful and beautiful to my halting, slower thought. The time came for him to enter our public school, and although it was second to none in the West, yet there were very few children of Christian Scientists and no teachers who had accepted our beloved faith. I listened to the suggestion of error, though I did not realize it at the time, that he would probably lose, in some measure, his clear thought by contact with so much mortal belief and talk, and that all the sweet, wonderful reasonings would be forgotten; the same old lie of the serpent—evil mightier than good. Many have been my rebukes and I have humbly accepted them all. He came into my study one day and stood looking intently at a familiar and dearly-loved picture on my wall. It was one popularly known as "The Rock of Ages." He looked up earnestly at the woman clinging to the cross, and said, "Who is the lady, mother?" I smiled and answered, "I do not know, dear; I used to think it was I!" He looked at it again and then at me, and thoughtfully said, "She can hold on without getting tired 'cause it's the Rock of Love. It isn't strength [meaning, I suppose, physical strength] that makes her hold on, it is how much she loves the Rock." Could there have been a truer explanation of the subject? It was one of my lessons. One morning I sent him into another room to get for me "No and Yes" by our Leader. He returned with the book and said, "What a funny name, mother, 'No and Yes,' I s'pose it's 'No' to error, and 'Yes' to God!"

Surely we mothers can never afford to believe that there is a power called evil, and that it can blot out or overmaster good—even though our present ability to reflect good may seem only as a grain of mustard-seed. It is only as we reveal to our children the Mother-love of God that in years to come they will rise up and call us "blessed."

In Rotherham's translation of the New Testament, Mark, 10:14 reads, "Permit the children to be coming unto me,—be not hindering them." Let us rather help them in the only true way,—God's way. Let us daily learn to be grateful to the dear Leader who has so lovingly, wisely, and patiently led us into the promised land of Christian Science. This mother-heart goes out to her in gratitude for the help received in bringing up the children.

Man's Sacrifice to Love.

LOUISE DELISLE RADZINSKI.

I will praise thee, O Lord, with my whole heart; . . . I will be glad and rejoice in thee: I will sing praise to thy name, O thou most High.
PSALM 9:1, 2.

ONE morning last winter, before dawn, a man's voice, clear, strong, and sweet, rose from the darkness of the street in a joyous song of praise.

The one who heard was still too much under the mesmerism of sleep to be sure whether the voice were human or not, but, listening, she heard quick footsteps striking

out from the icy pavement a ringing accompaniment to the song of joy that echoed among the silent houses; and his song was not "rag-time," was not mean or coarse, but a song of praise to God, to Love. Then the song of David rose in her thought, and the holy impulse that moved both the king and the laborer raised her upon its wings, and she realized what sacrifice is meet to be offered to Love,—the sacrifice of loving praise,—no matter what may lie before us, revealed or unrevealed.

This voice-picture has remained with her as a beautiful lesson. The man had left his home-comforts, and was wending his way in the darkness of a winter morning; his day's work before him, perhaps hard, perhaps dangerous, in the machine-shops, or in the powder-mills, but the song of praise still rose on the frosty air, though growing every moment more distant. At evening, all the weariness and the dangers of the day passed by safely, and the lights of home beckoning to wife and children, the song of praise would be natural and expected, the fitting end of a day of labor; but this early morning song, praise for benefits still to come, aroused in the listener thoughts of the true and just sacrifice man owes to the hand that sets his lines and appoints his way.

How often is Love praised in *advance* for the gifts that await man in the approaching day? How often do we realize that all the protection and guidance man needs are waiting for him, ready to his hand? If this were realized would not the song of praise and love rise from the whole land at dawn, at noon, and even-tide? What would not this world become if this truth were realized and acknowledged with praise?

We know that Love does not need man's praise to *be* Love; Love is supreme, whether man know it and acknowledge it or not; but how is it with man if he does not know his Father, does not acknowledge Him and yield Him love and reverence? Is there aught more pitiful than the expression of face or of voice of the man who says, "I do not know God as you speak of Him; He has been held up to me as a vengeful judge; a relentless and immovable law-giver; how can I love this ideal; how can I praise one who is always ready to destroy His helpless creatures?"

Blessed is he who may remove this false idea of God, and dispel the sense of utter helplessness which paralyzes the godless when the bitterness of mortal belief fills their cup and poisons their lips, stilling the voice of love and hushing the song of praise. The song of praise, rising at all hours, in all places,—whether it be vocal, ringing in sweet notes, or only that of happy smile and trustful glance,—always touches the suffering heart with the desire to know the source of another's joy and peace.

How often the student of Christian Science is asked, "What makes you so happy? I can't see that you are any better off than I am, but you seem always happy; *you have something I have not*. What is it? Is it a secret?" Is there any joy greater than this, to tell those dwelling in darkness of the light that divine Love has sent into the world that all men should *see* and *know* their Father-Mother-God, love Him and praise Him? Is there anything more beautiful than the light the revelation of Love kindles in eyes until then blind with the sadness none may know but those who have believed that "There is no God"? To see love rise like a tide and fill all the empty places of man's affections, filling all his thoughts with the sacrifice of praise to Him from whom all blessings flow, is to see that which transcends in beauty anything that nature in her loveliest aspects, and the so-called natural affections in their purest manifestations, can express.

To know that, no matter what the material circumstances of our brother may be, the strong assurance of Love, "Lo, I am with you alway," is for him, now and everywhere; that even if we "know not where His islands lift their fronded palms in air," we *do* know we "cannot drift beyond His love and care:" to know that Love's promises

are faithful; to know this, and to make our knowledge his, thereby raising our brother from the pit of despair to the plains of light, the heights of Love, is the work committed to us by our Father through our Elder Brother, Christ Jesus, and taught us practically by our beloved Leader, Mrs. Eddy, through her demonstration of the power and the mode of operation of the divine Love that is now redeeming man from sin, sickness, and sorrow.

Can we, then, who have accepted the teachings of this chosen servant of Love, can we do better than to "sacrifice," that is, "make holy" every moment, every breath, by using it in the service of Love, by making Love known to Love's children? In our text-book we are told what would be the result of such self-dedication by the students of Christian Science; then every thought, every act of man, would express gratitude—not the sense of obligation, but joy in the acknowledgment of benefits received—and the air of morning and of evening would ring with the holy offering of loving hearts in the song the happy laborer sang on the way to his work that dark winter morning:—

Praise God, from whom all blessings flow:
Praise Him, all creatures here below:
Praise Him above, ye heavenly host,
Praise Father, Son, and Holy Ghost.

Why?

LENA M. HALL.

PERHAPS no word in the English language is more constantly brought in use than the little word which heads this article. It is not surprising that among those who believe in a world which supposedly contains a mixture of good and evil elements, a world, moreover, in which the evil elements often seem to have the preponderance of power, this little word should be brought into frequent requisition.

It would seem, however, that in the thought of those who have unreservedly accepted our dear Leader's "scientific statement of being" (*Science and Health*, page 468), that this questioning element should be forever stilled. The questions, Why do I have to wait so long for help, when others are helped so quickly? Why do I not have more power to overcome my besetting sins, when I try so hard? Why can I not understand the truth more effectually?—these, and many kindred questions, should never be allowed to enter the thought of a Christian Scientist. If we look well into the condition of thought which makes this entrance possible, we may be shocked to find indications of such qualities as envy, ingratitude, self-righteousness, doubt, distrust, and so on.

Probably most of us first took up the study of Christian Science filled with the hope of the benefits which might accrue to us as individuals; but should not the advancing years fill us with a larger hope, even a yearning desire that divine Principle may be manifested to all mankind? Should we not rejoice equally in every case of healing which comes to our notice, recognizing it as one more proof of the ever-presence of that infinite good which is ready to heal and save the whole world? When we come into possession of such a consciousness, the mortal sense of self will begin to fade, our clearer vision will catch faint gleams of the divine selfhood, until at last, through gazing long upon the Christ-ideal, we shall be transformed "into the same image." Our old query, Why am I not healed? will be changed to the wondering exclamation, Oh, why did I ever believe there was any reality outside of the risen Christ? and, having lost sight of self, we shall stand complete in Him, realize the meaning of the Master's words, "that they might have my joy fulfilled in themselves."

Hath any wronged thee? Be bravely revenged; slight it, and the work's begun; forgive it, 'tis finisht; he is below himself that is not above any injury.—QUARLES.

The Healing of Alderman Umbarger.

THE following letter received by Rev. Mary Baker G. Eddy refers to a case of healing which has attracted much attention. Our space does not permit the publication of all the newspaper clippings inclosed in Mr. Dickey's letter, but sufficient are given below to show the progress of the case.—Ed.

Kansas City, June 18, 1905.

Beloved Leader:—I send you herewith a number of newspaper clippings which report the healing, through Christian Science, of a man who was given up to die by his physicians,—and indeed was all but dead, when a Christian Science practitioner was called. Through the understanding of the truth, as taught in Christian Science, the man was restored to life and health.

The case was watched by the public with ever-increasing interest, not only in Kansas City, but throughout the adjacent localities; and many letters of inquiry came from other sufferers in distant parts of the country, asking if it were true that this man was really being healed, and if Christian Science was doing the work. As the different newspaper items appeared from time to time, the case was freely discussed by all classes of citizens, and very great interest was manifested in the progress of the patient. The expressions, "I hope he will get well," and "How can these things be?" were heard on all sides.

I know you will rejoice to hear of this convincing demonstration of the truth of your teachings. You know what it means to heal a case of supposedly incurable disease, while the world looks on; and the fact that the work was done while the newspapers were publishing almost daily bulletins of the case proves beyond question that Christian Science can heal the sick under any and all circumstances.

The effect of the publication of these items has been to stimulate greatly the interest in Christian Science in this locality, and as Christian Scientists we realize more deeply our indebtedness to you, for having brought to the world this wonderful truth which heals and saves.

Lovingly yours,
ADAM H. DICKEY.

DEATH NEAR AT HAND.

At midnight last night, it was stated at the home of Alderman W. S. Umbarger that his attending physician had given up all hope, and had informed the household that the alderman's death might be looked for hourly. Yesterday the patient had a hemorrhage of the brain which greatly reduced his physical strength. He has been unconscious since four o'clock Monday morning. In deference to wishes of friends of the family a Christian Science doctor was called in yesterday, but he could offer no encouragement.

The Kansas City Journal, February 22, 1905.

FAMILY RESORTS TO CHRISTIAN SCIENCE.

The family of Alderman W. S. Umbarger, who has been critically ill with locomotor ataxia for several weeks, has not given up hope of his recovery, although Dr. C. S. McClintock, who has been attending him, announced that medical science could do no more for him. As a last resort the family called in Mrs. Charles M. Veazey, a Christian Science practitioner, and last night it was said at his home that his condition showed marked improvement.

Doctor McClintock has no hope of Mr. Umbarger's recovery. He said last night: "I do not believe that there is any possibility of Mr. Umbarger's ultimate recovery. He may rally for a day or two. I expected him to be slightly improved last night. Of course, I had not given up hope, for there is a chance as long as a man is alive. But I could not give the family any encouragement beyond the fact that

he was alive, and I readily consented for them to try Christian Science. If it can save Mr. Umbarger, I shall be glad. I have no longer any professional charge over Mr. Umbarger, though I shall continue to call as a friend of the family."

The Kansas City Star and The Kansas City Times,
February 23, 1905.

UMBARGER IS RECOVERING.

Two months ago the medical fraternity gave William Umbarger, alderman from the Third Ward, up to die. They said he had passed beyond the realms of human aid, and that his death was but a matter of a few days. He was then unconscious and his entire system was numb from a stroke of paralysis, and he had experienced a rupture of the blood vessels of the brain.

Friends of the family suggested the application of the Christian Science faith, and in deference to their wishes a healer was admitted to the house. From that time on the alderman began to improve, mentally and physically, and reports received from him yesterday at the City Hall were that he has regained the use of his limbs, his speech has returned, and that he is gaining rapidly in health and strength. Friday night acquaintances were invited to the house, and the alderman, it is said, enjoyed a programme of vocal and instrumental music, and declared his intentions of resuming his chair in the Council before long.

The Kansas City Journal, April 2, 1905.

ALDERMAN UMBARGER FULLY RECOVERED.

William S. Umbarger, alderman from the Third Ward, has fully recovered from his illness of several months, and was able yesterday afternoon to leave his house for the first time. He said that he would be back to the Council meetings some time this week, and resume his duties as alderman.

Mr. Umbarger was at one time at the point of death, and all hope for his recovery was abandoned by his attending physicians. He was suffering from locomotor ataxia, and his death was hourly expected. A Christian Science practitioner took charge of the case after it had been given up by Mr. Umbarger's physicians, and his condition has continued to improve, resulting in complete recovery.

The Kansas City World, April 16, 1905.

UMBARGER BACK ON THE COMMITTEES.

W. S. Umbarger, member of the lower house from the Third Ward, whose place was filled during his illness by W. J. Woolf, has resumed all his duties. The places on committees which had been readjusted during his absence were restored to him by the lower house last night.

The Kansas City Times, May 2, 1905.

Few men are privileged to read their own obituary, but Mr. Umbarger's condition was such as to induce one of the newspapers to publish an obituary which concluded as follows: "Alderman Umbarger is survived by a widow and a daughter seventeen years old."

It is to this that Mr. Umbarger refers in the following letter:—

Kansas City, Mo., June 8, 1905.

Mr. Adam H. Dickey,

Dear Sir:—The newspaper accounts of my healing through Christian Science as above given, are substantially correct, with the exception that I am not survived by a widow and daughter seventeen years old.

I have taken no medicine whatever since Christian Science took hold of my case, and I am now able to attend regularly to business.

Gratefully yours,
W. S. UMBARGER.

The Lectures.

Franklin, Pa.

Judge Septimus J. Hanna of Colorado Springs lectured on Christian Science at the Opera House, May 9. Judge Hanna was introduced by Major Isa Black, who said in part,—

The honor of introducing the speaker of the evening has fallen upon one of whom it cannot yet be said that he is a Christian Scientist; but I am a student of that Science, and so far as I can observe from the daily life and practice of these people, I find they are honestly striving to follow the teachings of the Founder of Christianity, Jesus Christ. In them I find nothing to condemn but much to commend.

Over nineteen hundred years ago there came to this world a unique, majestic character,—the lowly Nazarene,—at a time when there was much dissension and many phases of religious belief, teaching a doctrine much at variance with the established religions of the times. He was abused, maligned, accused. He dwelt among men; he trod the Galilean hills, he walked the streets of Jerusalem, he climbed the steeps of Olivet; he went about doing good, preaching and teaching the then unheard-of doctrine of "On earth peace, good will toward men," and love thy neighbor even as thyself. I find that the Christian Scientists in their daily walk and conversation are endeavoring, so far as in them lies, to render good for evil, and when they are reviled they revile not again.—*Correspondence.*

Silver Creek, N. Y.

Mr. William D. McCrackan of New York City delivered a lecture on Christian Science in Academy Hall, Friday evening, May 12, under the auspices of First Church of Christ, Scientist. He was introduced by Justice G. L. Weeks, who spoke in part as follows:—

One of the most recent of religious denominations to bring a message to us is that of the Christian Scientists. While they have not been persecuted as much as some other denominations in times past, yet they have undoubtedly had their full share of misstatement and misrepresentation. Now, although I am not a Christian Scientist, yet I believe in fair play, and in giving honor to whom honor is due. I will say this, therefore,—and I think you will bear me out in the statement,—that no religious denomination has ever forged to the front more rapidly than the Christian Scientists; no religious denomination contains among its members a more intelligent, more devoted, more zealous, more charitably inclined, more truly Christian class of people than they. They have a message for us to-night, and I bespeak for them a most respectful and considerate hearing.—*Correspondence.*

Muncie, Ind.

The lecture of Bicknell Young on Christian Science in the Wysor Grand Theatre Saturday night [April 29] has created considerable comment in the city. Attorney Jesse R. Long introduced Mr. Young, and said in part,—

Some years ago, before I had entered actively upon the discharge of the ordinary duties of life, I was impressed with the fact that the representative men of the community in which I then resided, wore an emblem; and as I entered actively upon the duties of life, as I was called from town to town and city to city, I discovered that what was true in the community in which I resided was also true in each community visited by me,—that the important interests of those places were in the hands of men who wore like emblems, and it did not take me long to learn that those emblems were the emblems of the great Masonic

order of the world. Whether this organization was good because of its inherent goodness, or whether the character of the men in it made it good, I could not then determine, but I now know it was in part both, but not the least was the basic ideas of the organization.

Since that time, and as my experience has broadened, I have met another organization, the Christian Science organization, one composed of men, women, and children, one whose field of operation is not confined by territorial limits, and whose purpose is to aid humanity in the broadest sense. The emblem of that organization is not a charm upon the watch chain, nor a ring upon the finger, nor a symbol upon the lapel of the coat, but it is a sweet, peaceful, contented, loving countenance, an expression of the face that bespeaks the noble character and life of the follower. And if you will look back of and through the mere facial expression into the lives of these followers and into the teachings accepted by them, you will better understand why it is that right practice leads to right results.

Does any one object to right living? Does any one say that envy, hate, jealousy, sin, and the discords of life ought not to be eradicated? Does any one say the Bible is not a proper book on which to base one's life conduct? Does any one say the sick should not be healed? Do you admit that the sick were healed by divine power in the early centuries, and if so, do you say that this divine power has either spent or lost its force?

The Christian Scientist believes that the power of God has not changed, but that it is as powerful and effective to-day as in the centuries past.—*The Press.*

Fighting Christian Science.

FROM New York comes the statement that four churches of the upper west side have organized to combat Christian Science. It is immaterial what the denominations of the churches are, for the crusade is simply a matter of local sentiment, and does not affect other organizations of the same kind elsewhere, except so far as they approve the plan.

A person does not have to be a Christian Scientist to feel that if the combined endeavors of the four churches in question were used toward carrying out the kind of work for which churches were established, they would be in much better business.

If Christian Science is the fraud that its opponents claim it to be, there need not be any loss of sleep over its growth, for any movement that is not founded on something of a substantial character will be carried down by its own weight ultimately. On the other hand, if the movement is all that its friends claim for it, opposition, instead of defeating it, will simply bring it more rapidly into prominence.

Four churches in any district of a big city would not have to look far for work of a practical character. If all the sick have been visited, if all the wants have been supplied, if comfort has been given in every possible way, if the poor have been visited, and the members have devoted sufficient attention to the proper ordering of their lives, and still have time with which they do not know what to do, there might be some excuse for a crusade against some one who does not believe exactly as they do. But until the mote is entirely removed from one's own eye, it is not according to Christian teaching to be hunting up the beam in somebody else's eye.

If all the energy of the past ages that has been put into the crusades against somebody else's belief had been turned unitedly to the problem of making the world better, the results would have been astonishing. As long as the Christian Scientists behave themselves, and do not break the law of the land, they are guaranteed just as much right to their ideas in this country as the members of the churches who are so intent on crushing them out.

Editorial in *The Morning Telegraph*, New London, Conn.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"Hear, O Israel: the Lord our God is one Lord."

I now request that the members of my Church cease special prayer for the peace of nations, and cease in full faith that God does not hear our prayers only because of oft speaking, but that He will bless all the inhabitants of the earth, and none can stay His hand nor say unto Him, What doest Thou? Out of His allness He must bless all with His own Truth and Love.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., June 27, 1905.

Rare Volume for Mrs. Eddy.

First Number of "The Book of the Presidents" Sent to Christian Science Leader—Only Woman Whose Biography Appears.

[We are indebted to *The Boston Herald* for the following interesting article regarding our Leader's copy of "The Book of the Presidents," which she has recently received.

That Mrs. Eddy should have been selected for this monumental work is gratifying to Christian Scientists, because it is one more recognition of her place as the great religious leader of the age.—ED.]

CONCORD, N. H., June 26, 1905. Concord's esteemed citizen, Mrs. Mary Baker Eddy, came into possession this week, by special messenger from the publishers, of a rare volume, which has received the highest praise of all who have been so fortunate as to see it.

"The Book of the Presidents and Representative Americans," for such is the title, is a monumental work of unique character, surpassing in beauty and elaborate workmanship anything of the kind which has hitherto been attempted in America. This magnificent publication, as its title suggests, consists of biographical sketches, portraits, and autographs of the Presidents of the United States, together with a department of autograph letters and armorial bearings, beautifully executed in their original colors. It is noteworthy that Mrs. Eddy is the only woman whose biography and portrait appear in this historic volume.

Among the well-known names which appear as holders of "The Book of the Presidents," are the following: President Roosevelt, Admiral Dewey, Cardinal Gibbons, Levi P. Morton, Thomas A. Edison, Secretary of the Treasury Leslie M. Shaw, Senator T. C. Platt, Senator R. A. Alger, Cornelius Vanderbilt, Judge John M. Harlan, Senator William P. Frye.

Accompanying the volume of which Mrs. Eddy is the possessor, which was No. 1. of the edition, is a beautifully engraved and illuminated certificate which announces that "A registered volume of the author's first proof or heirloom edition, limited to one thousand copies, was especially published for the holder thereof, who has been selected as one of one thousand representative citizens of the United States of America, who stand at the head of their respective vocations."

This handsome volume of the expert bookmaker's highest art is the product of the best American artists. Tiffany &

Co. of New York City are the designers, and their high reputation has only been enhanced by their signal success in "The Book of the Presidents." Zulerina Jackson executed the color work, and the Continental Press of Washington, D. C., were the publishers. The important work of editing this memorable volume was in the hands of the Hon. C. H. Grosvenor. [The printing and binding were executed by the Trow Printing and Bookbinding Co., of New York, under the personal supervision of Mr. Smith, its president. The work is of the highest degree of excellence and reflects much credit upon the company.]

"The Book of the Presidents" might well be styled a compendium of all that is noble in the art of book-making in this and past ages. No detail has been omitted to make this beautiful production the acme of perfection. The paper is the finest quality of deckled edge, hand-made stock. The leather for the bindings has been specially selected, and the greatest care exercised in its manufacture. Each engraving and every beautiful illuminated page is in itself a work of art, and worthy of special setting.

This great work is of royal quarto size, with gilt top, and elegantly bound in full crushed French red levant. It contains about two hundred pages, enriched by twenty-seven full-page engraved portraits, thirty-five specially designed and hand-illuminated pages, and a large number of finely executed photogravures. The title page is a work of art, and is wrought by hand. Two coats of arms, belonging to Mrs. Eddy's ancestors, have been exquisitely painted upon the white morocco doublure. The cost of the volume was \$1,000. The handsome binding, both within and without, is beautifully inlaid with colored leathers, and exquisitely hand-tooled with classic designs in gold. The covers are lined with leather inserted panels and watered-silk end leaves.

The illustrations in this unique work constitute a striking feature, and are in perfect keeping with its high character. Taking as a basis the best portrait of the Presidents extant, the engraver has reproduced them with rare fidelity. In addition to his skill the colorist has aided in bringing each portrait to perfection.

It would require a special article of considerable length to do full justice to the special designs of rich hand illumination with which this rare work is graced. Suffice it to say, there are more than fifty pages which contain elaborately designed missal illuminations. Each illustration is of the highest workmanship by a skilled artist. No two illustrations are alike, and the rich hues of the varied colorings throughout the entire volume form a perfect harmony without one discordant note.

The place and importance accorded to Mrs. Eddy is in full keeping with the distinguished character of this great work. As has been said, she is the only woman whose biography is included. Accompanying her written history is a beautiful engraved portrait, which is a very rare piece of workmanship. There are also fine photogravures of her present home estate, Pleasant View, her former home in Lynn, where she wrote the Christian Science text-book, Science and Health; First Church of Christ, Scientist, of Concord, N. H., Mrs. Eddy's munificent gift to the Concord Scientists, and Mrs. Eddy's house on Commonwealth Avenue in Boston.

The biography of Mrs. Eddy is a just and discriminating article by Judge Septimus J. Hanna, who was the former editor of the Christian Science publications, and First Reader of The Mother Church in Boston. It is safe to say, that to the majority of its readers the special feature of this great work is the remarkable letter by the Discoverer and Founder of Christian Science, and the author of its text-book, "Science and Health with Key to the Scriptures." In this letter, Mrs. Eddy, in a few clear statements, presents the fundamentals of Christian Science in a way as convincing as they are forceful.

The distinguished place accorded to Mrs. Eddy is another of the many evidences of the widening sphere of her spiritual ministry, and emphasizes the patent fact of her growing influence among the intelligent and cultured classes of this and foreign lands.

A Pathetic Incident.

THE following news item appeared in the New York *Sun* of June 21:—

"Twenty minutes after an injection of diphtheria anti-toxin had been given by a Board of Health inspector on Monday afternoon to Yetta Green, seven and a half years old, of 49 Forsyth Street, the girl died. Coroner Scholer is investigating.

"Doctor Darlington of the Health Board said yesterday that the inspector administered the injection as a preventative against diphtheria, from which the girl's infant brother was suffering. Death was probably caused, he thought, by the presence of a bubble of air in the syringe. The anti-toxin was in good condition, but such a bubble might cause death in twenty minutes, as in the present case.

"The father, Morris Green, who called on Coroner Scholer yesterday, said that the doctor injected the anti-toxin into the child who was well, but did nothing for the nine-months-old baby who had the diphtheria. He said that the inspector had made a mistake and treated the wrong child.

"I told him also," said Green, "that his instrument had not been washed, but he paid no attention to me."

"The child's body has been removed to the Morgue, and Coroner's Physician Lehane will perform an autopsy.

"Doctor Darlington has placed the case in the hands of Dr. J. F. Billings, head of the department of communicable diseases, for investigation. Doctor Darlington said yesterday that the inspector, whose name he refused to divulge, has a record of five or six years' hard work in the department without mishap."

In copying this item we have no thought of passing condemnatory judgment upon any individual, nor of entering into a discussion of the merits or demerits of anti-toxin from a medical standpoint. It is sufficient on these points to say that the use of this preparation is generally indorsed by the medical profession, and that many of the recent attempts to secure legislation, which has for its object the total elimination of the practice of Christian Science, have been supported by arguments based upon the supposed necessity for the administration of this serum. The advocates of such legislation have even gone so far as to advocate the compulsory use of anti-toxin in all diphtheria cases, but it would seem that in doing this they have not taken into account the personal equation which must enter into every operation that depends upon the skill and judgment of the operator, or upon the care with which he performs his work.

In this particular case it probably makes but little difference to the parents and friends of the child, whether death was due to the anti-toxin or to the manner of administering it; the vital point is that a healthy child who, even according to medical theories, might never have contracted diphtheria, was compelled to submit to an operation which resulted in her death. To say that the fatal result in this case was due to carelessness or accident, rather than to the serum itself, will not help matters, nor will it restore to life the child who was so needlessly sacrificed. Which is the dangerous element,—the so-called remedy or the mode of administering it,—is immaterial to the victim.

A few years ago, in St. Louis, a half score of children died in consequence of having had anti-toxin administered to them by way of prevention, as in the case of this Green child, and it was afterwards discovered that somebody had blundered, but we do not recall that any one was punished for this colossal offence.

The moral to be drawn from such incidents is that the practice of medicine is not sufficiently certain in its results

to justify legislators in yielding to the demands of the medical profession for laws which curtail the inherent rights of the people to choose such methods of healing as their experience has proved to be most efficacious—and least dangerous.

We cannot help wondering whether these cases would have been passed over so lightly had Christian Scientists been in charge of the children. We doubt it.

ARCHIBALD McLELLAN.

A Love-impelled Patriotism.

THE sentiments and impulses which give character to a national holiday are not to be undervalued, even though upon special occasions they may reach a distressingly high tide of exuberance and enthusiasm. It would be conceded by all, save the big and little boys, that the fire-cracker, as it figures on the Fourth of July, is a symbol of nerve-trying and well-nigh unendurable racket. It stands, however, for other and better things; namely, the individual recognition of communal life and interests, and the joy experienced at thought of the welfare of the many.

Self-centeredness would identify man with the animal and so become his bane, and though the material sense which gives rise to this false individualism is escaped from only as we awake to spiritual life, conditions are vastly improved through the attainment of that self-forgetfulness to which patriotism conduces,—a self-forgetfulness which often makes both the high and humble heroic. Like many other things, this sentiment may degenerate under the influence of a narrow concept of personal interest. A fine high thought, which naturally expresses gratitude, unselfishness, and altruism, may thus become a mere physical exhilaration which is blaring, thoughtless, and morally debasing; and here, therefore, as everywhere, there is need of the redemptive Christ-idea.

The genuine patriot looks to a world-wide good. In keeping with his sense of brotherhood he is alive to the welfare of the race, the advance of true freedom in all the world. He may identify himself with local movements, but his influence is never limited or consumed by them. A Kossuth could give his entire physical strength and resources to the cause of his aspiring countrymen, but his hope embraced humanity and his appeal still moves men. When we realize that the possibilities of life's ministry are limited only by the breadth and intelligence of one's affection, we find the explanation of the fact that in being the world's greatest patriot, Christ Jesus became the world's greatest helper. Love is the universal benefactor, and the only true freedom is spiritual, hence the inclusiveness and adequacy of our Lord's Messiahship. Christianity claims as its own every comforting, healing, and saving impulse. The spirit of the Master begets the broadest sympathy,—interest in all men, their conditions, their aspirations, their needs; and this is the key which opens to Christ's true ambassadors the hearts and homes of their fellow-men. Love here finds its unbounded opportunity for service.

It is the frequent assertion of the "unchurched" masses that Christian people do not know them; that they are not the objects of an intelligent and sympathetic interest, and that the preacher is not a patriot. In so far as this averment is true, it constitutes an impassable gulf between those whom God demands shall be in touch. Richard Cobden's wonderful influence over the English working people is accounted for when we remember the tenacity and enthusiasm of his love for them all. "There are in England women and children dying of hunger—of hunger made by the laws. Come with me, and we will not rest until we repeal those laws." Such was his appeal to John Bright, and the story of his triumph is retold at every English laborer's fireside. It has been said,—“A compelling evangel for the working class will be wrought out only by men who love that class, share its life, understand the ideals for which it is groping,

penetrate those ideals with a spirit of Christianity, and then proclaim a message in which the working people will find their highest self." These strong words point to a true patriotism, and never did the world more imperatively need the practical preaching of this saving gospel.

By our faith's assertion of Love's readiness and ability to meet every human need, and by the self-forgetting, all-loving lives of the world's great patriots, we Christian Scientists are called to exhibit that responsive and abiding interest in all men, in the betterment of their conditions, in the enlargement of their opportunities, and in the defeat of individual and organized selfishness, which will make it entirely clear that we are, in deed as well as in word, "lovers of men," and that we merit the name "true Christians and true patriots."

JOHN B. WILLIS.

Letters to our Leader.

Lafayette, Ind., June 21, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—My thought goes out in gratitude to-day for the interview granted Miss Wilbur of *The Boston Herald*; not because of her beautiful description of you, and your home-life and surroundings; but because through this interview "a false sense mentally entertained" has been rebuked and cast out. I have long desired to meet you personally, to clasp your hand, to hear your voice, but now not even a thought shall intrude to rob you of your great desire, "time, time to assimilate myself to God." I am also grateful for your answers to the questions asked. A member of the Episcopal Church to whom I handed them said, "Question number three and its answer will be my starting-point in the study of Christian Science. I now see what it claims to be."

From this on, dear Leader, I shall strive, more than ever, to mark well, give good heed to your earnest plea for time, and be content with seeing you and your beautiful, unselfish life through your writings and your labors to benefit mankind.

Most lovingly,

MARY A. HUGHES.

Cambridge, Mass., June 2, 1905.

Dear Leader:—At a testimonial meeting of the Christian Science Society of Harvard, held in Phillips Brooks House on Thursday, May 11, the members, with grateful hearts, told one another of the good that had come to them through Christian Science.

Prompted by a desire to express their gratitude to you, and realizing that it pleases and encourages you to learn of the good that Christian Science is doing in every community, the members decided by a unanimous, rising vote to tell you about our meeting. All had been healed; one of chronic hemorrhages, two of eye trouble which threatened to make further serious study impossible. One, when in an almost hopeless condition, caused by nervous prostration, was healed through Christian Science in three days. A law student had been rescued from death's door when a child, and another had been healed of a supposedly incurable disease which had overcast his life like a dark cloud.

A senior and a law student spoke of the good results that had come from the daily study of Science and Health. The senior said he could accomplish more in his daily college work when he interspersed with it the reading of our textbook. The law student said this study had replaced gloom, and a dread to begin each day, with a sense of confidence and peace. Another law student, and a graduate, said that Christian Science helped them to overcome temptations, and to live pure, upright lives.

All had found Christian Science of inestimable value during the strain of examinations. The one healed of nervous prostration, when the time came for his first examination after he had returned to college, remembered that the physicians had said he could never again stand any severe nervous and mental strain, and he became so frightened that he felt unable to bear up through the test. But his practitioner told him to realize that there is but one Mind, and that nothing could keep him from expressing this Mind. Through the three hours that followed, he clung steadfastly to this thought, giving his chief attention to it, and answering the questions before him as something of secondary importance. He wrote one of the best examination books written that day, and received a very high mark. The dread of examinations never troubled him again. A law student had been unable to eat and retain any breakfast on an examination day in the college, but last year, through Christian Science work, he overcame his fear so completely that by the time of his last law examination he was able to answer the questions with the same peace of mind and body that he might have written a letter at home.

For these blessings and many others the members expressed their deep gratitude to God, and to you, dear Leader, who have labored so lovingly and so successfully to heal and save mankind in the only possible way,—by helping them to know God aright. A graduate briefly recounted the experience of the treasure-seeker of mythology, who, when he forgot the flower that had opened to him the treasure cave, lost all the riches he had gathered there. He spoke, also, of Jesus' earnest efforts to heal Peter of ingratitude, which would have him deny his Wayshower and thus would have shut out from Peter the light that had illumined his life. These thoughts, together with the unfolding of what Christian Science has meant to us all, brought a deeper realization of the debt of love and loyalty we owe to you for re-affirming the truth which Christ Jesus taught and which to-day, as in the Saviour's time, is healing sickness and sin and replacing sorrow with joy in every community.

We are deeply grateful for the by-law which is enabling us—as it will enable the Christian Scientists in all colleges—to help one another to live pure, upright lives. I have on hand about \$100.00 to send in to the Building Fund of The Mother Church from the Society.

Lovingly yours,

J. E. SEDMAN, *Secretary*.

Oklahoma City, O. T., May 7, 1905.

Dear Leader:—I crave a moment of your precious time to speak to you from this "New Country" in the southwest,—our Nation's magnificent gift of free homes to her children,—a country fertile of soil, and doubly blest as to climate most of the year, having the balmy loveliness of the South, and a short snap of northern cold in the winter. There is plenty of room in the warm hearts of the members of our little church for you who have with such royal love pointed out to us the way to our real home. Five years ago this church was organized with seven members. The number was small, but it has stood and grown. Last year we sent five hundred dollars to the Building Fund of The Mother Church, and later the building fund for our local church was sent on for the same purpose,—making in all nine hundred and fifty dollars. At a meeting held to-day the need for a building site was made known and sixteen hundred and fifty dollars was subscribed in about ten minutes. Pardon these matters of detail, but I am so grateful for this evidence of interest that my thought turns in love to you, and while we know that your affection goes out to all, we want you to know that we appreciate it, and we long to know and live the love that you do.

Your loving follower,

MARY E. FLYNN.

Testimonies of Healing.

I feel that it is a privilege as well as a duty to tell what help has come to me through the truth as presented in Christian Science. Three years ago last March I was stricken with what the physician diagnosed as appendicitis. He called three and four times a day, and as I did not improve in the least, he ordered my removal to the hospital that I might be placed under the knife. My wife's mother, a believer in Christian Science, advised that I should not be taken away, and urged my wife to try Christian Science. I knew nothing of this truth except a few things my wife had told me, but I was willing to try anything which would relieve me of the terrible agony. With one treatment I was so far relieved of pain that I fell into a deep sleep. The physician had used every means known to *materia medica* to cause a movement of the bowels, but without avail. In one half hour after the first treatment, perfect action was brought about. The next day I walked four blocks, and in ten days was at my work, which requires great strength, as I am a shoer of horses.

After this wonderful healing I felt that my wife, who had been a physical wreck for a number of years, must be placed under treatment, and in three weeks she was so far restored as to consider herself a well woman.

I am thankful to God for the help we have received through the enlightened understanding of our Leader, Mrs. Eddy.—W. H. GRANT, Wakefield, Mass.

As I seat myself to add my grateful testimony to the thousands who are to-day proclaiming the power of the risen Lord, through Christian Science, I am so mindful of the blessings showered upon me and mine, during about four years' study of this truth, and joy-bringing experiences so throng thought, that I am truly at a loss as to where to begin the "wondrous story." Hopeless and well-nigh helpless, after years of disappointing experiences with physicians, drugs, and special treatment along various lines, I turned to Christian Science as a last resort, and my cry, "Help, Lord, or I perish," was so promptly and so naturally answered that I was restored to the most vigorous, buoyant health without being conscious of any process of healing. This all came without treatment, and merely through the reading of "Science and Health with Key to the Scriptures." Since my first glimpse of the indissoluble, changeless relation of God to His children, there has never been an hour of trial or distress in which He has failed to be an ever-present Father, Physician, Friend.

Not long since, one of my teeth broke off, and when I went to a dentist a month later, he asked if I had not suffered when the tooth broke. I assured him that there had been merely a trifling soreness, apparently caused by the forcible loosening from the gum, and he then informed me that the nerve had broken squarely in two, and frankly admitted that he could not understand the absence of pain which would ordinarily attend such an occurrence. Our revered Leader tells us in *Science and Health*, on page 488, that nerves have no sensation, and this was certainly proof positive of the truth of her statement.

This same dentist expressed the wish that all his patients were Christian Scientists, fully recognizing their ability to assist him in making his dental work a truly painless process. He also made the unqualified statement to me, that Science had done more for the disease known as pyrrhoea, a receding of the gums, than had all the doctors and dentists put together. Very early in my study of this truth, I found myself, one Sunday morning, with what promised to be an ulcerated tooth, on account of which I was unable to eat breakfast as usual. Healing in our meetings had never been mentioned to me, and I therefore attended church without any expectation of getting relief. To my utter astonishment, at the close of the service the troublesome

tooth was entirely healed. On another occasion I severely bruised one of my fingers, to the degree, in fact, that it turned black almost instantly and seemed about to burst. It was considerably out of shape and pained most aggressively. Just a few potent statements of the allness of Truth and Love enabled me to go soundly to sleep, and the next day I put a tight kid glove on that hand with practically no discomfort from the injured member.

When I consider the manifold blessings which have come through the understanding and application of truth to my daily and hourly need, I can only say, in the language of the Psalmist, "If I should count them, they are more in number than the sand." Love for God, for our patient, loving Leader, and for our fellow-man, is the only evidence that the Christ-message has been understood and received into the heart.

NINA M. HENDERSON, Salt Lake City, Utah.

At a time when all joy and peace seemed to have gone out of my life, Christian Science came to me and taught me to seek first the kingdom of God, and his righteousness, and I can truly say that all good things have been "added unto" me. With the understanding of God which comes through the writings of our dear Leader, I have been lifted into a world so overflowing with peace and beauty that I sometimes feel as if the joy which is in me must radiate and show others what it means to know, "The Lord thy God, he it is that doth go with thee; he will not fail thee, nor forsake thee." Though peace of mind was what I sought for and found in the study of Christian Science, I wish to acknowledge gratefully many demonstrations which I have been able to make over so-called physical ills. My little daughter was entirely cured of croup, which had been very persistent and had caused much anxiety. She was also healed of measles. I have been healed of sensitiveness to cold, which was very distressing and compelled me to go South several winters. Since I became a Christian Scientist I have moved hundreds of miles from my old home, many dear ones, and my beloved church, without experiencing any feeling of separation or loneliness.

I wish I could find words which would express my love for and appreciation of our faithful Leader, through whose help and example I have learned that "To be spiritually minded is life and peace."

MARY POWELL Lyster, Fredonia, Kan.

I feel that it is a great privilege to express my gratitude for the help I have received from Christian Science through our *Sentinel* and *Journal*. My heart goes out in a great sense of love to God and to our dear Leader. I had always been delicate, as a child, scarcely knowing a day free from some ailment. While I was yet a baby, my father died from inherited consumption, his father and his brother having passed away with the same disease. It was supposed that I would follow them; hence, every six months—or oftener—I was regularly taken to a physician to have my lungs examined. In winter I always wore two suits of flannels, the one next my body being lined with cotton batting, as I suffered a great deal from pleurisy, yet all this time our home was in sunny California. Since coming into Christian Science, I have spent several winters in the East, although while there those who knew me prophesied sure death for me. When I returned home in the best of health, they were equally certain that a difference of climate had wrought the favorable change; but I knew it was due to Christian Science, and am learning to prove, "Our heaven is everywhere, if we but love our God."

My mother became a student of Christian Science some thirteen years ago, and later I myself took up the study. I can say that from the time my mother began the study of *Science and Health* by Mrs. Eddy, there has been a steady growth into health and happiness for our family, and the thirteen years seem but a day. We have had many

struggles with error during this time, but the results attained point to the final victory over all error.

HARRIET FRANCES MORTON, San Jose, Cal.

Almost ten years have passed since my first acquaintance with Christian Science. Having had an injury to the spine, some years previous, my health seemed wrecked in every respect. Then misfortune—loss, grief, despair, and utter hopelessness—followed. A third surgical operation, deemed necessary by attending physicians, confronted me, with the gloomy outlook of paralysis, or death, as I knew I could no longer live in that condition. It seemed certain death either with or without the operation. At this juncture an opportunity to try Christian Science healing was offered me, instead of going next day to the hospital. For the sake of my little daughter, who pleaded earnestly for Christian Science, I consented to give it a trial. I was not healed perfectly, but was greatly relieved, so that all thoughts of *materia medica* were dispelled, and I determined to investigate Christian Science thoroughly. I had some religious prejudices to overcome, as I had been brought up in an orthodox church.

I began the study of Christian Science, but during the period of my life as a school-teacher, I found I had to be taking treatments nearly every day, as my time seemed too limited to work out my own salvation. At last Truth required of me the reckoning for my talent, and then I had to learn that only by thoughtful, prayerful striving, and watchfulness in the daily overcoming of the sins of pride, fear, hatred, temper, and self-will, could I hope for at-onement with divine Love, and find health and harmony. Extreme nervousness, dyspepsia, nervous sick headache, and the worst form of insomnia are a few of the ills which have yielded to the power of this truth.

I give humble, grateful thanks to God, and to our beloved Leader, Mrs. Eddy, and I send loving acknowledgments of help received.

MRS. ANNA M. WOODS, Los Angeles, Cal.

From my birth I was considered very delicate, and had taken medicine since ten years of age. When I was married I grew weaker, and at last my physician sent me to one of the best specialists in Chicago. I went, and he stated that an operation alone could help me. I felt encouraged, for relief and help were promised, and I did want to live. I had three little children that I felt I could not leave. Two operations were performed within five weeks. I spent eleven weeks in the hospital and went home worse than ever; but I was told that after three or four months I would be all right. A whole year went by in intense pain and suffering. I tried everything for relief, but without any help. The only thing that brought seeming relief was morphine, which I took often during the day and night.

One day a neighbor spoke of Christian Science to my husband, and although he did not believe much in a God, if at all, in the light that this dear neighbor presented the thought of God he felt that it might help me. He began telling me about it, and I was astonished to hear him talking about God helping me. I felt that he was far from God, and often prayed for him, but when he told me that God could heal me, I did not see why He would not hear my prayers as well as another's. My husband said that we might not pray aright. I consented to take Christian Science treatment, and I shall never forget my experience when I saw the dear Christian Science practitioner. I could hardly speak a word, for I could not hold my tears back, but such a new hope came to me when she told me that God is my Life, that He did not want me to suffer and die, that He wanted me to be strong and well. When she left me I told my servant to throw out all the medicine I had. That was over eight years ago, and neither my husband, our children, nor myself have taken any medicine since.

My healing seemed to be very slow, but I was never tempted to look back to material means for help. One experience I would like to mention. I had been suffering with neuralgia in my teeth for about two or three years, and after taking Christian Science treatment for four weeks it did not seem to relieve it. One evening the pain seemed very bad, worse than ever. The thought came to me, "The practitioner says that Christ is here to heal and save me now. If this is so, then if I only could reach out my hand and touch his garment as did the woman, I would be healed." Immediately the pain left me and never returned. I cannot explain what all this meant to me.

When I felt strong enough I went with my husband and children to First Church of Christ, Scientist, in Chicago. I shall never forget the first Communion service I attended there. When I saw that they all knelt down, I did the same, not understanding what it meant, but when kneeling down I felt such a helplessness, such a longing to know the language, to read and understand, that it was all I could think to pray for. In the afternoon I asked my husband to read in Science and Health and explain from it what the Communion meant. O what a glorious Sunday! I saw that if God could heal me physically, He could also make me understand how to read Science and Health. Then I began to put into practice what I knew, and God was my helper. I often took Science and Health and read aloud to myself, and I felt I was gaining. Then the thought came to take a dictionary which translated English into German. My knowledge of German was far from perfect, for I had been taught Danish, but it was all I had at hand. I wrote the German words between the lines in Science and Health, so as to remember them, and the revelation was very sweet. In the same way I read the Bible Lessons, so I began to understand the service, and in the same way the *Journal*. Then I began to understand God as revealed in our textbook, Science and Health, and the Bible became a new, inspired book. Now I can speak, read, and write English,—not so well as I wish, but I know the way will grow brighter. The spiritual understanding, the idea of God, good, that I have gained, even if it is only a little ray of the infinite intelligence, I can bring to others and prove to them that it heals and saves to-day as it did nineteen hundred years ago. It is the same truth that Christ Jesus and his disciples lived and proved, and it does save even to the uttermost. It has been proven to me that God can indeed "furnish a table in the wilderness," that those who wait upon God "shall renew their strength."

I am thankful to the dear one who first spoke of Christian Science to my husband and to me, and also to those who have helped me overcome physical pain as well as mental deformity. Above all, my heart goes out to God for His wonderful work for His children through our beloved Leader, Mrs. Eddy, and to her for her obedient following of Him. May I meekly and obediently work, watch, and pray, so as to understand more and more of His way and will.—MRS. ANNIE MORCK, St. Paul, Minn.

All my child-life was one of poor health. I suffered from no particular physical ailments, but from weakness, being easily exhausted. I can remember that friends and neighbors advised my mother not to attempt to educate me, as I would not live to be a woman. My childhood was made most unhappy by over-sensitiveness. I lived upon the praise and approval of my friends and teachers, and when this was denied me, or I was reproved, I suffered more acutely than from any physical trouble that I have ever known. As I grew older, this became worse and, coupled with other diseases, made me morbid. Even in childhood I was deeply interested in religious matters, and used to attend services and revival meetings where my feelings were so wrought upon that I held myself as beyond redemption. I used to pray and work for that

change of heart to which so many others testified but which would not come to me.

As I grew older, all these conditions culminated in a disease known as chronic malaria. This came periodically, twice a year, bringing with it acute attacks of chills and fever, with their unhealthful attendants, melancholy and depression. These periods grew longer and longer, until they met and I was not free from malaria the year round. The chills brought on indigestion and constipation, and became more and more frequent, until I had them twice a day for some time. As I attempted all this time to keep on with my work, I suffered from nervous prostration, and my cup of woe was indeed full. I tried physicians and medicines for several years with no help. The strong drugs I had taken in the hope of breaking this disease, only served to put my stomach in such a condition that I could digest almost nothing. Later, I entered a sanitarium where I was treated with baths and electricity. For a while I grew much better, but five years ago everything seemed to fail me and I grew worse than ever. I had tried all curative methods that I knew.

I had heard of Christian Science but knew nothing of it. As I was in great suffering, however, and there was nothing else to do, I decided to try it. I went to a practitioner, and after two weeks' treatment found that nearly all of my troubles were healed and the rest rapidly disappearing. I could eat and digest anything, whereas I had eaten no meat or heavy food for several years. I could also do my work with no fear of sickness, and I could do it better than ever before. I found a God that I could love, and the "change of heart" I had so earnestly prayed for as a child. Instead of melancholy and depression, I have peace and happiness, which, with the wholesome enjoyment of friendship, have proved a revelation to me of man's dominion as a child of God.

Christian Science leaves nothing incomplete, no matter for what reason we adopt it; it cannot touch one side of our lives without transforming all. If I say I am grateful for this, it is the least I can say as well as the greatest, for gratitude includes obedience.

EDNA L. FARNEST, Peoria, Ill.

Christian Science was first brought to my notice several years before I was ready to accept it. Later, about four years ago, when there seemed nothing more that *materia medica* could do, I was induced by a friend to turn my thought Godward, and to give Christian Science treatment a trial. For ten years my physical ills had been legion: bronchitis, acute stomach trouble, insomnia, neuralgia, nervous exhaustion, and many other troubles, which followed one another in swift succession, while hereditary consumption was supposed to be one of the necessary evils which sooner or later must come upon me. I suffered many things of many physicians, who were all kindly sympathetic, and who conscientiously tried to help me. I was sent to sanitariums, where electricity, massage, and medicated baths were used without avail. A trip to Europe was finally decided upon, and the constantly changing scenes for a time seemed to alleviate the suffering, in making me forget it; but when I returned to this country the old conditions all returned also.

I struggled on with *materia medica* a year or two longer, but I noticed that my last physician, a sweet woman of the homeopathic school, gave very little medicine, and the highest potencies seemed to do me the most good, but none of them effected a cure. This fact caused me to do some thinking on the subject, and finally I decided to read "Science and Health with Key to the Scriptures" by Mrs. Eddy, and also have treatments from a practitioner. I confess that I did not at first understand what I read, nor was I immediately benefited by the treatments I received, but I continued to read and study until my false gods, in the shape of drugs, were finally thrown aside, and I was liberated from

my physical ills, as well as from many other errors which all my life had retarded my progress spiritually.

It is impossible in words to express my gratitude to our dear Leader, for bringing us this practical religion, which is making the whole world "new" in emancipating from sin and sickness all who are willing to listen to its message. I am humbly striving to follow and rejoice, and if at times the way may seem a little rough, I know that when we are patient and earnestly seek Truth, He leads us on.

FLORENCE ELLIOTT, Chicago, Ill.

When Christian Science was first brought to me, I had been obliged to spend the greater part of my time in bed for several years; living for months at a time on liquid foods, and suffering for nine years with a trouble that it seemed only the knife could remove. I had tried all kinds of physicians, and water-cures, without any lasting benefit, when I turned to Christian Science and was perfectly healed.

My daughter was also healed, having had trouble, from early infancy, with her ears and was fast growing deaf. My healing was very slow, but I would like to state wherein I believe that even this was a benefit. In searching the Scriptures and Science and Health daily, for a better understanding of this blessed Christ-truth, which I knew had released many of my friends, not only the healing came, but with it a love for this study, the value of which in one's life cannot be estimated. It certainly brings a peace that passeth understanding, and which the world can neither give nor take away.

When our lives have been changed from despair and hopeless invalidism to joy and health, we cannot give thanks enough to God, the giver of all good. We are also very grateful to our Leader for Science and Health, which shows us that God is the same yesterday, to-day, and forever, an ever-present help in trouble, that He heals sickness and sin now, as in Jesus' time.

MRS. EDWARD K. EMERY, Buffalo, N. Y.

Words are inadequate to express my gratitude for the many blessings that have come to me through Christian Science. Although an earnest church worker for many years, it has only been during the past three years, since I began the study of Christian Science, that I have come into a fuller and higher understanding of the Christ-life, and the Bible is also made clearer to me. During the past two years I have known many wonderful cases of healing; in myself, my family, and others,—many ills met and overcome by the truth that makes men free.

I was healed in one absent treatment of a severe case of nervous prostration, and muscular rheumatism was overcome in one day. During the past summer my little son, eleven years old, was healed of scarlet fever, which was met in less than two days; at the same time pneumonia was overcome in a half-hour, and bloody dysentery in a little over a week. My heart is filled with love and gratitude to God, and to our beloved Leader, who has brought this truth to us.—MRS. IDA ETTER, Brooklyn, N. Y.

For many years I had been a sufferer from female trouble and varicose veins, and at times was so ill I could scarcely stand. Some dear friends had been trying to interest me in Christian Science, but I was slow in being interested. I finally awakened to the truth, however, and through the reading of Science and Health I have been entirely healed.

Life is again bright, and my heart is full of gratitude to God, and to our dear Leader, who has made everything so clear for us. How blessed to know that God, good, is all-powerful, and that He will heal every woe. May I grow in truth and become a worthy follower in this great Cause.

M. L. LIMBACH, Monument, Col.

From our Exchanges.

The race wearies of the monotonous confession, "The thing I would not, that I do. Who shall deliver me?" Every religion has striven to answer this agonized query of baffled and beaten humanity. They err egregiously who would represent the heart of Christianity as merely an enunciation of a better life philosophy, an improved system of ethics with wiser maxims and somewhat profounder moralizings. It can never be understood except as motive, impulse, strength, inspiration, empowering. It means that humanity shall be charged with a dynamic Holy Spirit, whose natural and inevitable product is righteousness and holiness, supplementing human weakness with Divine efficiency, linking man's frailty to God's almightiness. Christianity may be described as a broader and more rational creed for the intellect; as a mysticism; as a philanthropy. But its chiefest characteristic is that it is a religion of power.—*Western Christian Advocate*.

The present religious revival shows two things clearly: First—That man is incurably religious. Great material prosperity or great material distress may for a time push the physical side of life into the foreground and hide the deeper needs of the soul. But inevitably the hunger of the human spirit reappears and the soul "thirsteth for God." The religious man is simply the complete man; the irreligious man is a fragment, lacking in full humanity. Secondly—That modern scholarship is furnishing new and powerful aids to the religious life. The centre of interest is no longer in physics and chemistry; no longer in biology, but in psychology and the social sciences. But these have to do directly with the man's inner life.

WILLIAM H. P. FAUNCE, LL.D.
The Watchman.

The nature of this new birth is also pointed out by Jesus to Nicodemus: "Except a man be born of water and of the Spirit, he cannot enter into the kingdom of God." If this passage stood by itself it would point to baptism as an absolute necessity to salvation. But in the remainder of the conversation only the new birth of the Spirit is spoken of, which leaves us to infer that the Spirit is the only essential element in the new birth. The inward act of the Spirit is essential, the outward act of obedience is important, and necessary when possible, but its omission, when not an act of disobedience, does not debar from salvation.—*The Watchman*.

Nothing is moral which is less than a passionate and purposeful pursuit of the highest ideal which the soul is capable of entertaining. The only power adequate to generate and sustain such a spirit is a strong and deep religious conviction of the reality and practicability of this ideal, a conviction that it has been and can be a realized ideal. This, let us hope, is to come in a revival of religion more profoundly ethical than any that has blessed the world since Pentecost.
The Outlook.

What we need in this world more than all else and above all else is a second incarnation—an incarnation of Christ into every thought, word, and deed. So shall heart bloom into heart, family touch family with blessing, and our communities, with all their organizations and activities, stand upon their feet with a sweeter philanthropy and a nobler righteousness.

EDWARD PAYSON INGERSOLL, D.D.
The Homiletic Review.

The immanent God worketh hitherto, and will continue to work, revealing His truth to those who seek after it diligently. The little systems men make will crumble one after another, but God and His truth will remain.

The Pacific Unitarian.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of **SCIENCE AND HEALTH**, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in **SCIENCE AND HEALTH**. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to **JOSEPH ARMSTRONG**, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to **WILLIAM B. JOHNSON**, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to **STEPHEN A. CHASE**, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

Twelve or more to one address, each, prepaid 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.00; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

National.

President Roosevelt has directed that action be taken by the Administration which will facilitate the landing in this country of Chinese of the exempt classes, and also eliminate from the Immigration Bureau such administrative features as have been the subject of criticism by Chinese. It is the declared intention of the President to see that Chinese merchants, travelers, students, and others of the exempt classes shall have the same courtesy shown them by officers of the Immigration Bureau as is afforded to citizens of the most favored nation. This action is the result of an investigation initiated by the reports of the growing tendency of Chinese merchants to boycott American trade. As a result of the inquiry orders have been issued to the diplomatic and consular representatives of the United States in China by the President himself, that they must look closely to the performance of their duties under the exclusion law and see to it that members of the exempt classes coming to this country are provided with proper certificates. These certificates will be accepted at any port of the United States and will guarantee the bearer against any harsh or discourteous treatment. As was anticipated, this action has already resulted in the issuance of instructions by the Chinese Government to all viceroys and governors to cease anti-American agitation.

The one million dollar endowment fund for the American Academy of Fine Arts in Rome is now lacking only about one hundred thousand dollars. While engaged upon the work of the World's Fair at Chicago a number of artists established the "American School of Architecture in Rome," to enable American students of architecture who were qualified, to develop their powers more fully. In 1897 it was decided to broaden the scope of the Academy along the lines of the French Academy in Rome, and thus provide a school which should be open to American students of sculpture, painting, and music, as well as architecture. In June of that year the American Academy in Rome was incorporated under the laws of the State of New York. In 1901, John Hay, Secretary

of State, authorized the Ambassador at Rome to accept the position of trustee, ex-officio, of the Academy, and directed him to secure for it "all the privileges and exemptions accorded by the Italian Government to similar institutions in other countries." The Academy was incorporated by Congress on March 1, 1905.

Gifts to Harvard University aggregating \$3,700,000 were announced at the annual meeting of the Harvard alumni. Two million four hundred thousand dollars was the gift of the alumni in aid of the teachers' endowment fund, and will result in an immediate increase in salaries. The other gifts were \$905,000, to be devoted to the permanent fund of the university, \$661,000 for immediate use, and \$100,000 from President Roosevelt's class of '80, to be used preferably for the purpose of increasing teachers' salaries. President Eliot also announced that there was also contributed during the year, through Harvard University, one-tenth of the endowment fund of \$1,000,000 to the Academy of Rome for American students. The gift of \$2,400,000 from the alumni, President Eliot declared, was more money than had been contributed by the alumni and friends of Harvard for the same purpose between 1638 and the present time, and constituted the finest message which he had heard during the thirty-six years that he has been president of the institution.

General interest has been aroused among educators by the announcement of a gift of ten million dollars from John D. Rockefeller to be devoted to education. The following letter accompanied the announcement.—

"New York, June 30, 1905.

"To Messrs. Wallace, Buttrick, and Starr J. Murphy, Secretaries and Executive Officers General Education Board, New York:

"Dear Sirs:—I am authorized by Mr. John D. Rockefeller to say that he will contribute to the General Education Board the sum of \$10,000,000, to be paid October 1 next, in cash or, at his option, in income-producing securities at their market value, the principal to be held in perpetuity as a foundation for education, the income, above expenses and administration, to be distributed to, or be used for the benefit of, institutions of learning at such times, in such amounts, for such purposes, and under such conditions, or employed in such other ways as the Board may deem best adapted to promote a comprehensive system of higher education in the United States.

Yours very truly,

"F. T. Gates."

Secretary John Hay passed away on July 1. He has represented the United States at Paris, Madrid, and Vienna; he has been in the cabinets of several Presidents; he was favorably known as a writer and poet. The *Boston Herald* says of him: "A score of triumphs dot his path. There have been some secretaries of state who were greater in other ways, such as Blaine and Seward and Webster; but, looking simply at his record, it would be hard to find one who has been greater simply as Secretary of State, the secret of his diplomatic actions being candor, good faith, honesty, and prompt action. His success is largely due to his doing the right thing at the right moment."

Between June 1 and June 26 more than 72,000 immigrants landed at Ellis Island and the official estimate is that at the present rate 85,000 would arrive in June. In June of last year 51,731 arrived and in May of this year 94,712. The Census Office approximates the total immigration for the fiscal year at 1,061,650, which indicates a record breaker, the high-water mark being 857,046 for the year ending June 30, 1903. For the fiscal year 1904 the figures were 812,870.

Mr. Loomis, Assistant Secretary of State, has been selected as special ambassador to France to receive the remains of Captain John Paul Jones, which were discovered in Paris by Ambassador Porter after a long, persistent search.

The famous sloop yacht *Puritan*, defender

of the America's Cup against the *Genesta* in 1885, since converted into a schooner, was sold by auction last week for \$4,025.

The class of 1883 of Harvard presented the college at commencement with a portrait bust of James Russell Lowell, by Daniel C. French in Knoxville marble.

At Yale announcement was made of the receipt of a gift of \$1,000,000 from John D. Rockefeller, and of a similar subscription from the alumni.

Foreign.

Russia and Japan have both accepted Washington as the place of meeting for the peace plenipotentiaries and the early part of August as the time for the preliminaries. Russia has announced that her mission will be headed by M. Muravieff, Russian Ambassador to Paris. The Japanese mission will be headed by Baron Komura, Japanese Minister of Foreign Relations. These plenipotentiaries will be accompanied by military, naval, fiscal, and legal advisers, as well as a host of secretaries and attaches.

As a result of the negotiations between the different groups of the Swedish Riksdag, it has been arranged that special committees consider the Swedish-Norwegian situation. The Government's bill looking to a settlement with Norway was referred to these committees. The debates on the bill brought out fiery speeches, in which the action of the Norwegian Storting was condemned and the Swedish cabinet severely criticised.

In the recent meet at Kiel four American yachts, either American owned or American built, made fine showings, each winning the race in her class. *Meteor III.*, with the Emperor at the wheel most of the time, beat the Hamburg, the boat that came in second in the recent Atlantic race.

In the recent orders issued to Lord Kitchener, who is at the head of the military forces in India, such enlargement of powers was conferred that it was rumored Lord Curzon, Viceroy of India, would resign unless modifications were made. This the Government is now considering.

The consideration of the Moroccan question is progressing smoothly between France and Germany. An amicable settlement now seems assured and France will probably concede to Germany's request for a conference of the Powers to regulate affairs in Morocco.

Industrial and Commercial.

It is stated that the lines running east of Chicago have lost more than \$1,000,000 during the last few months through the decrease in the export beef trade, and during the same period the money value of this export traffic has decreased more than \$4,000,000. It is said that representatives of the "Big Four" packers of Chicago are now in the Argentine Republic investigating the beef industry there, with a possible view of securing a monopoly. It has been the custom of the Argentine packers to forward their beef from South America in a frozen state. The freezing of beef impairs its quality, and consequently the Argentine beef did not seriously come into competition with the American beef, which reached England and other countries in far superior condition and brought higher prices. The Argentine packers, after investigation, adopted the American methods of handling their export beef, and are now enabled successfully to compete with this American product. Plying between South America and the large European ports the Argentine Republic packers now have steamers equipped with refrigerator plants, which keep the beef at the proper temperature and permit it to cure on the ocean voyage. The change in method met with instant success and now the Argentine packers are sending their export beef into Europe, and especially to England, in whole cargoes, and it can be sold at lower prices than the same quality of American beef.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Christ our Passover.

SUE H. MIMS.

And it shall come to pass, when your children shall say unto you, What mean ye by this service? That ye shall say, It is the sacrifice of the Lord's passover, who passed over the houses of the children of Israel in Egypt, when he smote the Egyptians, and delivered our houses. And the people bowed the head and worshiped.—*Exodus, 12 : 26, 27.*

Purge out therefore the old leaven, that ye may be a new lump, as ye are unleavened. For even Christ our passover is sacrificed for us: Therefore let us keep the feast, not with old leaven, neither with the leaven of malice and wickedness; but with the unleavened bread of sincerity and truth.—*1 CORINTHIANS, 5 : 7, 8.*

As we read in the Old Testament of the greatest of all the Church feasts, and note the accuracy with which it prefigures the true Paschal Lamb and the holy communion with divine Principle—the true Pass-over from death unto Life—demonstrated in the triumph of Jesus, we stand in awe of that great unit of consciousness—Moses—who lifted a nation to a sense of an incorporeal God as Mind. Moses caught a glimpse of the pattern shown in the mount,—the Christ-ideal,—and he thereby met and overcame the asserted forces of idolatry and necromancy, demonstrating the one supreme incorporeal Mind, the God of Israel. We may well realize the majesty of Moses' spiritual perception, and the fitting reference of Jesus when he said, "Had ye believed Moses, ye would have believed me: for he wrote of me." Only through a symbol's cruder teaching, however, could he express it to those who followed him through the wilderness of doubts and fears toward that Eldorado of Spirit where man rests in the consciousness of God, good.

The remarkable chapter in Exodus referred to above, accurately describes him who should redeem the world. Moses said, "The Lord thy God will raise up unto thee a Prophet from the midst of thee, of thy brethren, like unto me." This was what Moses saw of the ever-present Christ who should come into human consciousness as the man Christ Jesus,— "a lamb without blemish and without spot,"—the type of perfected humanity.

As we recognize the clearness of this prophetic vision, we wonder that creed, ritualism, and materialism should have hidden from the Jews the "Lamb of God, which taketh away the sin of the world," but, as Paul says, "their minds were blinded: for until this day remaineth the same vail untaken away in the reading of the old testament; which vail is done away in Christ." Not only to the Israelitish consciousness has this vail remained, but until our beloved Leader removed it, through her wonderful vision and inspired writing, the Christ was but dimly understood, even by Christendom.

Christian Science discloses the deep and sacred meaning of the passover to each individual, showing that self-immolation alone can effect the transition from sense to Soul, from beliefs of material existence, with its sin, sorrow, and limitation, to the true consciousness of man and the universe as spiritual, harmonious, and eternal,—perfect because the Father is perfect.

Jesus came in the flesh to show the power of Spirit over the flesh by dispelling its illusions of disease and discord.

In banishing them from his own consciousness as unreal, he bridged over the seeming separation between God and man, became our passover from an unreal to a true sense of glorified being, thus making us at-one with the Father—our Life—and revealing to each individual his own inseparability from God. This spiritual idea forever abides with us, breaking down the middle wall of partition, and uniting all in the one body of Christ—in the unity of Spirit—the bonds of divine brotherhood.

At this Communion season, if those who have named the name of Christ, having escaped from all unworthy aims and selfish desires, having purged out the old leaven, having immolated selfhood in matter, should unite and attain, as nearly as they may, a purified consciousness, bound together in love and unselfed desire for "on earth peace, good will toward men," such a wave of divine Love would touch the universal thought that the very heavens would be opened, the glad song of angels would again be heard, and the risen Christ in Christian Science would irradiate the earth.

The call of the hour is for this consecration, for this unity in thought and deed, to have one aim, the establishment of the kingdom of Love, good on earth, the reign of righteousness. Our hopes are gladdened on every side by the evidences of honest reform, of sincere aspirations for right and justice, and we know that the leaven of truth which the woman hid in the three measures of meal is working in social, political, and religious realms, heralding a reign of rightness—righteousness. Our communion need not be local, nor dependent on time, for all who are healing the sick in Christian Science—destroying sin and sorrow—are ever communing together in the one Mind. Though separated by oceans, or deserts, the ever-present Christ unites all in the one desire and design.

This lesson of the Passover is interestingly illustrated in Jewish history by the crossing of the river Jordan, which rushes precipitately and turbulently down through the hills and valleys of Galilee—emptying into the Dead Sea. It has great prominence in Bible history. It marked the boundary between the region of desert wanderings and the longed-for Canaan. Its crossings and recrossings symbolized the vicissitudes of the children of Israel. Elijah passed over it at his ascension, and many noted events occurred on its banks, but more significant than all these is this, that through the ministry of Christ Jesus the boundary between sense and Soul which it prefigured was bridged for all to pass over,—not through, but over. Christ, the spiritual idea in Christian Science, has bridged all material sense, and man may pass over, not through death, but through transfiguration, through communion with the Mind that is Life.

Metaphysical Definitions.

ERNEST C. MOSES.

WEBSTER defines metaphysics as "the scientific knowledge of mental phenomena; mental philosophy." Sir W. Hamilton is quoted as understanding the word to mean, "a science . . . exclusively occupied with the mind,"—evidently meaning that which is known as the human mind. Mrs. Eddy, with far deeper insight into the realm of

thought, correctly defines true metaphysics, in her various works on Christian Science, as the Science of divine Mind,—the one and only intelligence. To the person whose studies and preconceived opinions have clothed the word "metaphysics" with the chill of mysticism and uncertainty, and to whom the word "science" suggests dim abstraction and intellectual difficulties, her definitions unfold so much of sweetness and light, when understood in expanding measure, that the speculation, mystery, and vagueness which seem to surround the subject are gradually dispelled. As the student obtains a better understanding of the metaphysics of Christian Science, and discovers that it teaches the receptive mind more and more of the common fatherhood of God as Mind, of God as Love, and of man's true and inseparable relation to the Father, the word metaphysics comes to have a most profound and welcome significance. The only scientifically natural result of this rightful evolution of consciousness in the thought of the student is a deep, heartfelt yearning for more light; for a larger understanding, wherewith to assist others to remove the trammels of wrong thinking, and thus to enter into that peace and joy which express the natural and rightful status of the real man,—the image and likeness of God.

As we look back into the fading memories of our own sense dreams we recall our emergence from the sepulchres of our dead hopes and ambitions, "bound hand and foot with graveclothes" of false knowledge. We remember the difficulties experienced in removing the napkin which blinded our own eyes and we earnestly desire to exercise the right conferred by the Christ on those who understand, to loose our brother, and "let him go," when he is ready to come forth from his dead beliefs. We therefore hope that these lines of thought may assist some earnest student to clear away the ambiguities with which a false mortal sense has surrounded the word "metaphysics," and thus help him to attain to his resurrection from material beliefs.

In *Science and Health*, page 115, Mrs. Eddy admits the difficulty which arises when the attempt is made to express metaphysical ideas in material terms, but she intimates that the demonstration of the truth elucidates statements otherwise difficult of comprehension. Nearly all students of Christian Science seem to experience this difficulty at the commencement of their textual investigations of the subject. A general misinterpretation of the metaphysical or spiritual meaning of many words which are used in stating the truths of Science, and which are also used in describing some action or condition in the material world, very often augments the difficulties to be overcome. A term may be used by our Leader, or by some writer in our periodicals, in its purely metaphysical sense, while an inexperienced or superficial reader is quite liable to interpret the word materially, and thus acquire an erroneous or confused idea of the whole statement.

It is not surprising that people who have become accustomed to the material signification of words and phrases, through many years of familiarity with their use in such connection, should fail to grasp quickly the deeper and accurate spiritual meaning of these words as they are employed in the literature of Christian Science. Scientists are not disconcerted nor surprised when they observe that some cultivated and intellectual investigators of this subject, who study the letter of Christian Science with thoughts surcharged with self-importance, material philosophies, and human wisdom, fail to perceive the true inwardness of its scientific statements. The fault is entirely in the un-receptive condition of the individual, who lacks an earnest, conscientious desire to know the truth—his educated inclination to reason from a predetermined opinion which is not ready to rise above a material concept. It has become axiomatic among the honest students of Christian Science that no person is competent to express an opinion

of any value concerning its potent verity and authority, who has not demonstrated his understanding of its Principle in healing sickness or sin in some of their myriad forms of manifestation. Inasmuch as thousands are demonstrating the correctness of the definitions given in the text-book of Christian Science, no more importance can be attached to prejudiced criticism than to the observations of a critic of the verities of calculus who has failed to grasp and apply its rules and formulæ.

As in every other field of study, the receptivity and diligence of the student determine the thoroughness with which each seeker acquires an understanding of true metaphysics. The student obtains no understanding except through demonstration, and progress can only be attained by the student whose human sense of will is subordinated to, and guided by, the one Mind, and who knows that there is none other. Christian Science reveals the Principle of harmony—heaven—and there is no other way whereby we can escape from the discords of this dream of mortal sense into a more harmonious sense of existence, save as Jesus taught and demonstrated—by childlike trust in God and obedience to Him. This must be the starting-point from which to gain an understanding of Christian metaphysics, although its alterative effects are experienced by humanity, individually and collectively, in advance of understanding. No mortal has yet named the name of Christ in divine Science, and started on the inevitable upward journey, who has not become in some measure willingly obedient to the divine Principle and its idea therein revealed. Genuine humility, repentance, and reformation are the waymarks of progress in this ascending journey. No brilliancy of speech, no display of intellectuality can blind the clarified vision of the advancing followers of our Leader to the fruits, the works that indicate the degree in which each individual is obtaining the correct understanding of the metaphysics of Christian Science.

All that may be stated in respect to correct terminology in Christian Science is equally applicable to the language of the Bible. If anything, the matter of definition and interpretation involves more careful discrimination in the study of the Scriptures than in the study of our text-book, for the Biblical records describe many of the eternal verities in historical narratives, epics, proverbs, parables, etc. That this was always characteristic of Scriptural writings is evidenced in the statement made by Solomon, wherein he enjoined men to seek learning in order "to understand a proverb, and the interpretation; the words of the wise, and their dark sayings,"—dark to mortal sense.

Although fragmentary glimpses of the inspirational meanings of the Scriptures have been caught by many students in the past, the sacred volume was never understood from Genesis to Revelation until Mrs. Eddy drew from its pages the consistent, scientific, and incontrovertible spiritual import of its records, delivered to a waiting world in her book, "*Science and Health with Key to the Scriptures*."

The truth brought to mankind through the study of these two books, is understood and demonstrated only through faith, self-abnegation, obedience, and consecrated study, whereby the students learn to "speak with new tongues;" and this is attained through the gradual substitution of the metaphysical sense of the Word for the physical,—a return to the pure language of Spirit.

The true metaphysical meaning of the terms employed in Christian Science is best apprehended by those who are sincerely trying to follow our beloved and revered Leader, in living the truth thus unfolded; thereby showing their fellow-men that Christian Science is a system of pure, demonstrable metaphysics, and not a cold, speculative philosophy derived from mortal thought; that it is a complete revelation of Life, Truth, and Love, which destroys sickness, poverty, envy, jealousy, selfishness, sensuality,—all error. It assuredly is for Christian Scientists patiently

to prove that Christian Science is not a school of sentimental mysticism, but that it is a religion redolent with love, good will, and good cheer,—stately, majestic, and beautiful beyond the power of tongue or pen to describe; the veritable tabernacle of God among men, established by Him for time and eternity.

Impersonal Guidance.

ELIZABETH R. LEVINGS.

To keep the *impersonal* Truth predominant in thought is my constant endeavor, as herein lies the success of our demonstrations, and a proof that this is demonstrable is shown in the following experience. A young member of my family was called upon to go to another place. As this was the first experience of the kind, the necessity of finding a suitable home was quite a problem to solve. The situation was talked over between us, what to do and how to do it. The place was a small town, consequently conditions were not like those in Chicago. How, then, one should proceed to find the comforts of home for a reasonable price, was the question. The advice given was, first of all, to know the truth,—then to take the usual methods of inquiry. A suggestion to consult some Scientist in the place was looked upon favorably for a few moments; then it seemed the better way to be guided impersonally, and this was adhered to. Later this was put into practice by going to a store where a desirable class of people would be most likely to be heard of. In this way a name and address were obtained, although the opportunities to find a place such as was wanted were said to be few, and the demand great. The person recommended was seen, but could not accommodate the one who needed a home; however, this party gave the name of another, where satisfactory arrangements were made.

On going down to breakfast the first morning, a copy of Science and Health, a *Quarterly*, and a Bible were found lying on the parlor table. This discovery, of course, brought out the fact that the newcomer was also a Christian Scientist, and both the lady of the house and the new member into her household rejoiced at this leading of Truth. The good news sent home to mother caused her to rejoice as well, in this evidence that divine wisdom unfailingly meets every human need, and that even our "names are written in heaven."

The Withholding of Testimony.

W. R.

Bear ye one another's burdens, and so fulfil the law of Christ.—PAUL.

How tardily is the testimony given in some cases, for the help received in Christian Science; for freedom from the sense of physical suffering; from the cares and anxieties of commercial, competitive strife; from doubt and despondency; from the sin of temper unguarded and unrestrained; and yet all these and many more have been overcome in our own experience, and that of many others, but we hesitate and delay the giving of our testimony, because we fear that our experience is too small to give, or our manner of telling it too uninteresting to convince another. We have often gone to the testimony meetings with heart seemingly full to overflowing, and with an intention to offer a cup of cold water to any thirsty one longing for the freedom which had come to us, but we remained silent, listening to the loving expressions of gratitude for just such benefits as we ourselves had received; excusing ourselves because they had said what we wished to say, only in a better way; counting it sufficient that another had given drink to the thirsty, and that the need for our own offering had not come.

And yet, we had not meant to be indifferent or ungrateful; we felt deeply conscious of our indebtedness to God,

and to our revered Leader, Mrs. Eddy, for having given to us Science and Health with all its treasures; for having made the Scriptures a living and present help to us; and for her self-sacrifice and labor of love for all; but with all this conviction so clear within us, we had not yet learned to love our brother to the extent which made it our duty to realize that, having received "freely," we must as "freely give." In this we have neglected to "preach the gospel," and to this extent have denied the Master, for "inasmuch as ye did it not to one of the least of these, ye did it not to me." These words sum up the measure of our duty, and also the burden of our responsibility, if we refuse to share with another the understanding which divine Love has given to us and by which we have been made free. It will not excuse us to say we have had only a small experience in demonstrating truth, for we have the parable of the talents to warn us how ineffectual such a plea will be.

Surely our deliverance from the bondage of many fleshly ills should in itself stimulate us to throw off all lethargy, and make us to rejoice that we too may be privileged to bear witness that it was the living presence of Christ, Truth, which had healed us. The testimony meetings bear eloquent witness to the wisdom of our Leader in providing us with opportunities for giving and receiving evidence of the curative and preventive power of Christian Science, and we should use our opportunities willingly and cheerfully, no matter how small the measure of our experience, in gratitude to God, and to our Leader for having discovered and unfolded to us the means whereby we may emerge from the darkness of mortal sense into the understanding of the truth which maketh whole. Let the measure of our gratitude be shown in utilizing our testimony meetings to the fullest extent. Had it not been for Mrs. Eddy's incessant labors for us, where would be our present rejoicing that now we are free from the sense of physical and mental bondage?

[Written for the *Sentinel*.]

Harvest.

LISETTE S. NAEGELE.

Oh, seeker after happiness,
Ploughing life's fallow field,
Oh, sow you weal, or sow you woe,
What harvest shall it yield?

If 'tis for sensuous joys, life's fruits
You've pressed and gaily quaffed,
'Tis yours to drink the embittered dregs,
Instead of joy's pure draught!

Oh, plant in yearning hearts' fair soil
The seed of noble aims,
Let Love's sweet purpose find its growth,
Dispel unworthy claims.

Then pluck the choicest blossoms there,
And lay them at the feet
That seeking chance to pass your way;
'Twill be a usage sweet!

And when denuded, stripped of all,
Your eager, helpful thought
Has fed this brother's starving soul,
For self reserving naught,

Receive in the pure love that beams
In his illumined eye,
The thanks of God for serving Him,
And blessings from on high.

Selected Articles.

Wednesday Evening Meeting in Concord.

In response to Mrs. Eddy's invitation to the people of Concord to attend the Wednesday night testimony meeting at First Church of Christ, Scientist, there was present the largest congregation in attendance upon any regular service since the church was dedicated. The invitation was extended by reason of the presence in the city of Judge Septimus J. Hanna, C.S.D., formerly First Reader of The Mother Church in Boston.

The services opened with the singing of the hymn, "Watchman, tell us of the night," followed by the reading of a portion of the 9th chapter of Acts, and from "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, after which the congregation united in silent prayer, followed by the audible repetition of the Lord's Prayer. Mrs. Eddy's hymn, "O'er waiting harpstrings of the mind," was then beautifully rendered.

The First Reader then addressed the audience, in part as follows:—

"We read to-night of the acceptance of Christianity on the part of one who had been its bitter foe. He had not simply been indifferent, he had not simply scorned the new religion, he had been its avowed enemy. He saw in Christ Jesus one whom he felt to be an impostor, and he regarded it his sacred duty to destroy the new religion. We have heard also of Paul's change in thought. There came to him a vision of the truth, and instead of seeking to persecute, he became a most worthy champion of the Christ and his cause.

"This Wednesday night meeting is held for the purpose of giving to those who have been blind and have had their eyes opened to the truth, who have found in this new-old Gospel an answer to their prayers, an opportunity to tell us their story."

Judge Hanna then spoke, in part as follows:—

"I am sure that there is no one present who can more truthfully say that his eyes have been opened, than myself. I had read the Bible somewhat, perhaps as many read it,—I had discharged my duty in that respect,—but I read it with no expectation of receiving that which was helpful, uplifting, spiritual, so that I can truthfully say, the scales have fallen from mine eyes.

"The message from the Bible this evening rang out the notes of freedom, liberty,—the liberty of the sons and daughters of God. Perhaps there is no more widely-quoted text in the whole Bible than the saying of the great Teacher, 'Ye shall know the truth, and the truth shall make you free.' When we quote this passage, we should consider the context. Jesus said, 'If ye abide in my words, then ye shall be my disciples indeed, and ye shall know the truth, and the truth shall make you free.' 'If ye abide in my words.' What is it to abide in his words? It is to study his life, his character and teachings, until they are so well understood that they can be obeyed. This imposes the necessity of doing something on our part,—working out our own salvation. It means deep, serious, and earnest study. We shall not become free, we shall not enjoy freedom, until we have learned what that truth is. It then remains for us to press forward, to go on, and on, until freedom shall be attained in all its glory and all its fulness.

"I cannot speak to-night, in this beautiful church edifice which has been dedicated to God, without indulging in some measure of retrospection. I first saw this city about fifteen years ago. If I remember correctly, there were very few students of Christian Science in this place at that time, and had I been told that within fifteen years there would be so large a church organization in Concord, and that a magnificent church would be erected, I could not have believed such an achievement possible. At that time, Christian Sci-

entists were meeting in a comparatively small hall in Boston. So remarkable has been its growth that to-day its membership encircles the globe. This Christian work is the achievement of a citizen of Concord, the Discoverer and Founder of Christian Science, Mrs. Eddy. Is there one of us to-night who can forecast the next fifteen years of religious history? My friends, I speak in no sentimental terms when I say that this great wave of religious thought shall never recede, this great religious deluge shall never go back; but it shall go on, and on, until God's kingdom shall have fully come, and His will be done in earth as it is in heaven."

In closing, Judge Hanna said he was being constantly brought face to face with persons who have been marvelously healed through the ministration of Christian Science. He said he was making mental notes of all these cases, but would mention one only. This he gave as an illustration of the delusion of fear, and of God's power, when sufficiently understood, to dispel all fear. The case was that of a man in Fort Wayne, Indiana, who had all his lifetime been in fear of being bitten by a mad dog, and declared that if he were ever bitten he should have hydrophobia. When he had passed middle life he was bitten by a dog, and supposed he was badly bitten. As a matter of fact, the dog's teeth did not penetrate his flesh. Nevertheless the man supposed he had hydrophobia in its worst form. He became so violent that it took several men to care for him. At length, a Christian Science practitioner was appealed to. The practitioner said that "with God all things were possible," and began her work, that is, she began to pray,—praying in the highest and best sense of the term,—imploping God's power and presence, knowing that all His promises were true and would be fulfilled. In three weeks this raving maniac was restored to his normal condition, and returned to his former employment.

Mrs. Hanna followed with a testimony full of gratitude to God for her own remarkable healing more than eighteen years ago. She paid a beautiful tribute to her Teacher and Leader, Mrs. Eddy, for the great help and loving counsel received from her.

Other testimonials were received from visiting Scientists, expressive of their gratitude for their healing and their increased love for God and the Holy Scriptures.

Concord (N. H.) Evening Monitor.

Material phenomena and sense testimony seem to be stubborn realities, even to a Christian Scientist, until he has proven them otherwise. In the same way a mathematical error is a stubborn reality to the one demonstrating a rule in arithmetic, until his study of the basic law enables him to see that error in its true light of nothingness. Christian Science does not teach that man has no body, or that there are no such things as bones to be broken and set, but it does prove, by healing them through mental means and without material application or appliances, that these mortal, material bodies and these bones have only the substantiality which mortal belief gives them. In the same way Christian Scientists have substantiated the teaching of their Science, that poisons have only the power delegated to them by human belief by mentally counteracting their effects in hundreds of cases.

R. STANHOPE EASTERDAY.
Marion (Ind.) News-Tribune.

If Christian Science is meritorious it has equal right with other beliefs to exist. If it is without merit it will die out of its own inherent weakness. In either view of the case there is no call for legislation concerning it. The recurrent demand that legislatures shall "regulate" the affairs of the people breaks out at every session of State legislatures and of Congress.—*Omaha (Neb.) World-Herald.*

The Lectures.

Frankfort, Ind.

A magnificent audience assembled to hear Judge Septimus J. Hanna of Colorado Springs lecture on Christian Science, last night [May 4]. Judge Hanna was introduced by Hon. Martin A. Morrison, who spoke in part as follows:—

Christian Science is here, and so far as relates to this generation, it is safe to say that it is here to stay. Men may accept it or reject it; but they cannot put themselves beyond its influence over their thoughts and lives. It is a vital force in our midst, and as such it must be reckoned with. It is the part of wisdom, therefore, to learn the truth about its doctrines. It were a woeful want of wisdom to refuse to give to it a candid hearing, and to content ourselves with blind and impotent denunciation.

We who are schooled to the older forms of faith, and wedded to the names of our respective denominations, find ourselves sometimes tempted to lift our hands against the men and women who accept and promulgate new interpretations of the revealed Word, or who hold up before men some new vision of the truth. We are honest in our momentary fears, and imagine that the truth is endangered by these new intellectual and religious movements. On second thought, we recognize at once that we are unconsciously substituting our interpretation of the truth for the truth itself. The truth is never endangered. It never changes, nor can it. It fears no foe. It loses no battles. We ourselves are continually rising to new view-points. From each new view-point we catch a new vision of the truth, and instinctively adopt a new interpretation of the sacred Word. Our interpretation changes, and ought to change; it ought to deepen and widen with the process of the suns.

Let us not flatter ourselves with the thought that we are called upon to keep the world from being deceived by those who teach what may seem to many to be new and strange doctrines. The world will judge them, even as it judges Presbyterians, Methodists, Baptists, and all other sects and denominations, by their deeds rather than by their words. Men are slow to accept the lordship of Jesus over their own spirits, but they have long ago adopted his standard for the measurement of the spirits of their fellow-men. If this new interpretation of religious faith and practice shall ever supplant our own in the hearts of the people, it will be because it has produced before the world these fruits of the Spirit more abundantly than we have done. Against such a triumph we dare not raise our voice.

Christian men who have the courage of their convictions, who know in whom they have believed, and who know that He is able to keep that which has been committed unto Him against that day, are ever ready to give a candid and thoughtful audience to any man who has the will and the power to add anything to the sum total of human knowledge and happiness, who seeks to give to his fellows a truer interpretation of the word, or a clearer vision of the truth, and whose mission it is to lead men into a closer walk with God.—*Frankfort News*.

Poughkeepsie, N. Y.

Not all who so desired were able to find room in First Church of Christ, Scientist, Friday evening [May 19], to hear Miss Mary Brookins of Minneapolis in her lecture on Christian Science. Samuel Slee, Esq., who introduced the speaker, spoke in part as follows:—

I take it we all know something of life, yet have found it difficult to explain the whys and wherefores. We have not always been able to do the right thing in the right way. We face no new problem. Thinkers have taught and doers worked out rules for the conduct of life since life on earth began, and despite effort and accomplishment mistakes and wrongs appear. This imperfect combination of thought and

deed would be abnormal in a universe created, sustained, and governed by a wise intelligence, and we are now and here compelled to seek the rightful place and the true duty of man as sincerely as did any of those who preceded us; well knowing that until we find what we seek we cannot hope that peace, happiness, and content will be universally enjoyed.

In this age a woman has announced what is claimed to be the re-discovery of a truth, whose practical application restores and maintains health, material well-being, and brings present and future happiness; and to the people of these United States, primarily a people foremost in the development and utilization of the material world, is presented for investigation and adoption, and subsequent application and demonstration, this spiritual truth. So we have the appearance of a woman, at a time auspicious because of the respect in which women are held, among a people open-minded and hospitable to truth, with a message of good will to all men. May I say to you, it is singularly appropriate that a woman should present to us this message of another woman. I have pleasure in presenting to you Miss Mary Brookins of Minneapolis.—*The Enterprise*.

Milwaukee, Wis.

Hon. Clarence A. Buskirk lectured at the Davidson, April 30. He was introduced by Granvill T. Dings, Second Reader of Second Church of Christ, Scientist, who said in part,—

The theme Christian Science requires little if any introduction. There is scarcely a hamlet in all our broad land but has in some measure felt its beneficent influence or seen its healing effects.

This great subject, as it is being presented to the world to-day, is not a mere budget of statements and speculative theories; it is an exposition of absolute truth that has been positively demonstrated. These lectures are provided in order to give to a thinking, truth-seeking public, brief discourses on a subject that is vital to all mankind,—stupendous, inexhaustible, and infinite.—*Correspondence*.

Jefferson City, Mo.

Mr. Bicknell Young lectured at the Jefferson Theatre, April 27, to a good audience of representative citizens of this city. The speaker was introduced by Congressman Dorsey W. Shackelford, who spoke in part as follows:—

Speaking for myself, I am constrained to say that I know but little of the teachings of this sect. I do know, however, that wherever I have been I have found some of the best people members of this denomination. Like Paul, they teach that greater than all other virtues is charity.

Knowing so little as I do of the doctrines of Christian Science, I can to-night do no more than to say that this is an age of investigation. The highest attainments of humanity have been reached through honest and careful investigation. The subject of Christian Science deserves the most thorough investigation.—*Correspondence*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Card.

I HAVE the pleasure of saying, that, on June 27, 1905, my beloved student, Mrs. Augusta E. Stetson, formerly the First Reader of First Church of Christ, Scientist, New York City, and the dear practitioners of Christian Science in the Reading Room of this Church, presented to me these lovely tokens of remembrance: Mrs. Stetson sent a magnificent solid silver ice pitcher, tray, cup, and slop bowl; sweetly inscribed on the cup were these Scriptural words—"A cup of cold water in His name;" the other dear Christian Scientists sent an exquisite gilt table with onyx top,—all to be placed in my room in First Church of Christ, Scientist, Concord, N. H.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., July 5, 1905.

The Relation of Sickness and Poverty.

SOME persons who have attended our Wednesday evening meetings for the first time have been more or less mystified and unfavorably impressed by the fact that many references are made by the speakers to the great improvement which has taken place in their financial condition since they have accepted Christian Science as their rule of living; and because the connection between sickness and poverty has not been understood, although a little thought upon the subject would have shown them that the two are usually as closely related as parent and child, these investigators have gone away from the meetings in a somewhat dissatisfied frame of mind. Would it not be well, therefore, for those who thus refer to their material affairs to give a reason for their betterment which will be intelligible to the casual attendant, and thus avoid all danger of misunderstanding.

To those who do not know that poverty is so largely the result of sickness we commend the following statement by Jane Addams in the *Chicago Inter Ocean*. She writes, "The subject of poverty has been more scientifically investigated in recent years, and especially in the last year, and it has been found that intemperance ranks only third in the causes of poverty. In some cities it ranks fifth.

"Sickness and accidents both have had greater effects on the workingman and on mankind in general in reducing him to lower straits financially. Sickness has played a surprisingly large part, and outdistances intemperance, while accidents also take precedence over intemperance."

Some of our superficial critics have been led by their misinterpretation of these testimonies to believe that Christian Scientists are mercenary, just as other critics, who have noticed that our people are, as a rule, well dressed and prosperous in appearance, have been impelled to the conclusion that Christian Science is "a rich man's religion;" that it does not appeal to the poor and that there is nothing in it for this class.

When it is understood that Christian Science has healed thousands of intemperance as well as of sickness; that it has restored these people to usefulness in the business world and in many cases turned helpless invalids into strong and efficient breadwinners, there should be no misunderstanding of these testimonies and no criticism of Christian Scientists

for their prosperous appearance. While this is not the whole of the question from the standpoint of Christian Science, it is sufficient to account for the improved conditions in many cases. Only those who have had the experience can know how many overcoats and wraps in years gone by have been made to serve another winter in order that some suffering loved one might be ministered to, or how many "Sunday suits" have been foregone so that the invalid member of the family might have the best medical attendance and, perhaps, some expensive appliance or remedy.

ARCHIBALD McLELLAN.

The Nation and the True Man.

As individuals advance in years, they are very apt to ask themselves, when their birthdays come to remind them of the high hopes with which they set sail on life's voyage, whether or not they have realized these hopes, and thinkers are wont to question the past and the future no less seriously each time the nation's natal day comes with the revolving years. A retrospective glance over the history of this country can but give a sense of satisfaction with the present, if prosperity and progress are to be measured by external conditions. It is scarcely possible that those who were present at the birth of this nation could have foreseen its unexampled development at home, and the rank it has come to hold among the foremost nations of the earth.

For all this and for yet greater blessings we should be profoundly thankful to the Giver of all good, and grateful also to those who have proved the power of divine intelligence and its law to exalt the individual and the nation alike. In the midst of the evils which have attended our advance in wealth, and which seem to menace the safety of the nation, there can be no question that we are attaining to a truer sense of what constitutes prosperity, and the fact that these evils are so clearly recognized as evils, while it is generally conceded that the only remedy is individual righteousness, gives a sure promise of coming deliverance.

Some of the utterances of President Roosevelt at the National Congress of Mothers, held in Washington last March, are very significant in this connection. Among other things, he said: "In our modern industrial civilization there are many and grave dangers to counterbalance the splendors and triumphs. . . . In the last analysis the welfare of the State depends absolutely upon whether or not the average family, the average man and woman and their children, represent the kind of citizenship fit for the foundation of a great nation; and if we fail to appreciate this we fail to appreciate the root morality upon which all healthy civilization is based. . . . Effort and self-sacrifice are the law of worthy life for the man as for the woman. . . . Teach boys and girls alike that they are not to look forward to lives spent in avoiding difficulties, but to lives spent in overcoming difficulties. Teach them that work for themselves and also for others is not a curse but a blessing; seek to make them happy, to make them enjoy life, but seek also to make them face life with the steadfast resolution to wrest success from labor and adversity, and to do their whole duty before God and man."

To know how to do our whole duty, as thus eloquently emphasized by our President, is the one great problem, and those who accept Christian Science find in its teachings immeasurable help in solving each individual problem that presents itself. No one can estimate the value to the nation of one life nobly lived, and he who lives up to the demands of God's law reflects the might and majesty of good, whatever be his earthly station. Like "a city that is set on an hill," his light cannot be hid. Of such an one it may truly be said, "of the increase of his government and peace there shall be no end," for he reflects the divine government which alone gives peace and prosperity to the nations, in the ratio that its demands are recognized and obeyed. Already is the recognition of this righteous

dominion extending from sea to sea, and we are learning that our brothers' needs are ours, and that divine Principle shall assuredly "break in pieces the oppressor,"—whatever would deprive man of his God-given freedom,—and of those who have come to realize this true freedom it may well be said, "Happy is that people, whose God is the Lord."

ANNIE M. KNOTT.

A Garden Gleaning.

THOSE who are cultivating their acquaintance with the flowers these sunny days, will not doubt the statement that Paradise was a garden, nor question that the roses and lilies are its most fitting symbols. These sweet friends win us through such simple ways, and yet how irresistible is their appeal! Who has ever buried his face in their beauty, or quaffed deeply of their proffered fragrance without wishing he were as pure and sweet as they! Facilities for acquiring the physical development, the mental alertness, and the technical skill which give promise of a coveted success, are offered us everywhere in the schools, but life's finer and worthier achievements call for the mastery of an art which we learn more surely at our mother's knee, or in the companionship of these "the children of purity and of peace."

How prodigal they are in their generosity! How indifferent to our unworthiness in the bestowal of their delights! They seem to have learned, as may we, that of the best things there is inexhaustible store; that they are brought us from gardens which never fail, in the Paradise of God. The flowers exact no pledge and impose no creed, but with delicate persuasiveness they appeal to the purer sentiments, the more refined tastes, the more spiritual aspirations. They tell us of the one Divine source of all sweetness and beauty, they tell of the infinite Artist who, in their beauteous unfoldment, is ever addressing our nobler sense, and thus they are indeed the true friends and benefactors of all who love their appearing and yield to their ministry. To listen to their teaching is to grow into their likeness.

Whatever the channel of address, this is the kindly nature of Truth's loving call, and David must have sensed it when in a prayer of grateful acknowledgment he said, "Thy gentleness [O God] hath made me great." In Christ Jesus this gentleness divine brought crushing disappointment to those who had expected they would find in him the dictatorial strenuousness of a great militant leader, but to the sorrowful and broken-hearted, to the distressed and discouraged it brought then, as it brings now, sweet comfort, the uplift of heart that makes men strong, even unto death. In all time and in all the world the re-bloom of the Christ-life has brought to humanity "beauty for ashes, the oil of joy for mourning." It makes of the heart a fair garden, redolent with the perfume of unselfishness and love. And who shall measure the meanings of a life thus perennially "in flower," a life that floods its home and neighborhood with suggestions of heaven? What a joy to cross the threshold and find its every room scented and sweet! The charm of the rose is neither added to nor diminished by its setting; in palace or in cot it is equally beautiful and complete; thus also, does the Christ-life designate man. If in poverty, its radiance is undiminished and unimpeded. It is superior to circumstance and will ultimately come to its own. If possessed of abundance to fulfil the impulses of kindness and love, it is still superior, and we are as glad of the lavish expenditure of the rich who are humble and saintly, as we are of the generosity of the flowers. Love's gentle supremacy has given us another glimpse of the divine ordering,—of a Paradise within where love knows no restraint and goodness no limitation. The gentleness of God has become the greatness of men. This is the true life,—a "fruit of the Spirit," as Paul names it,—and to the sensitive seeker the flowers disclose its pattern.

But, says one, your lily is linked to the mud, you cannot separate them, and how can you hope to separate life from its earthiness? To this the Christian Scientist alone can give adequate answer. He knows that whatever of human impulse and experience is good and beautiful, comes not from material sense, but from dawning Truth and Love,—that human good is but the earnest of the triumph of Spirit in man, when he shall reflect the beauty of God as the blossoms reflect the glory of light. Thus recognizing the true man, regardless of asserted fetters and unseemliness, we are without excuse if our kindness ever fail.

Upon a modest headstone that shall be nameless, there is written this simple epitaph, "He was so pleasant!" No need to say that this man loved the flowers and had learned well their lessons.

His life was gentle, and the elements
So mix'd in him, that Nature might stand up
And say to all the world, "This was a man!"

The aroma of a smile is very delicate, yet how wonderfully pervasive and helpful, and we must know that tired eyes are waiting for this mark of gentle kindness in every byway of our pilgrimage. Surely he who, in the consciousness of good, the aspiration to be wholly conformed to the Christ-ideal, shall bring to every man and to every circumstance the gentleness of love's sweet blossoming,—he shall win the inheritance promised of old, "Thou shalt be as a watered garden." JOHN B. WILLIS.

The Book of the Presidents.

MR. JOHN M. LONGYEAR, who recently had the privilege of examining the copy of "The Book of the Presidents," lately presented to the Rev. Mary Baker Eddy, and described in last week's *Sentinel*, pronounces it the finest product of book-makers' skill that he has ever seen. He also gave his opinion, that it is the most valuable book in the United States to-day, owing to its intrinsic worth, its associations, and the fact that it is the first copy of the first edition.

Letters to our Leader.

Wyandotte, Mich., April 18, 1905.

Mrs. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Dear Mrs. Eddy:—I am sending you two articles that appeared in our paper, the *Wyandotte Daily Record*, in reply to attacks made by Rev. McDowell, pastor of the Presbyterian Church, this city. I thank God that I am able in a small way to help spread this glorious gospel. I thank God, too, for the blessings that have come to my home through Christian Science. My wife was healed of so-called incurable organic disease of years' standing, after the most eminent physicians of Michigan, Indiana, and Ohio had failed. I have been morally and spiritually healed. We cannot praise God too much for Science and Health and for the spiritual interpretation of God's Word as given us by the author. God bless you, dear Mrs. Eddy, for this new-old truth.

I hope ever to be found ready and willing to help lessen evil, from whatever source it may come.

With loving and grateful heart, I am,

Yours very truly,

J. O. WEBSTER.

The following excerpts are taken from the articles referred to above.—ED.

Christian Science is nothing less than the exemplification of the practical teachings, words, and works of Jesus of Nazareth.

Natural scientists during the past ten years have come

to the conclusion that all so-called matter was once and will again be resolved into infinite and unseen forces. Sir William Crookes and Lord Kelvin, among the world's most noted natural scientists, only recently declared that "atoms are resolved into forces," and that "matter is only a mental concept."

These conclusions are not far fetched when compared to the teachings of Christian Science which affirm that God and His infinite creations, including man, are the only realities of existence.

The Christian Scientists know that their help, their healing of sickness and disease is from God, and, as earnest and honest seekers after truth, they are striving to live the life of the Master, and all the powers of earth, the flesh, and the devil cannot take from them what they know to be the power of God as demonstrated through the Saviour of men.

Critics are learning fast that it does not do any good to ignorantly assail this great and growing religious body, for it only sets fair-minded people to investigate it. An earnest and honest investigation, in a large majority of cases, increases the number of followers, which is multiplying at a most marvelous rate throughout the world.

Eau Claire, Wis., June 11, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View Concord, N. H.

Beloved Teacher, Leader, Guide:—It has seemed to me well that we, the beneficiaries of your life-work for humanity, should help to brighten the ascending path your feet are treading before us, up to the heights of divine Science. On Christmas Day, after some preliminary work by the Church Board, we took up a collection for The Mother Church Building Fund, amounting in all to sixty-nine dollars and fifty cents. Five dollars of this sum was a free-will offering from the children of our Sunday School. To a few, who had not yet learned to look to the one source of all-supply, nothing doubting, this step seemed unwise and uncalled for. To those who saw clearly, it was a manifest duty to care first for the Vine, if we expected the branches to prosper. In April following we canceled the mortgage on our own church building, and paid up every church debt; and we date our own financial demonstration from our little offering to The Mother Church on Christmas Day. Following this, it was decided, by a unanimous vote of the Church, to defer church repairs, and therefore church dedication, and send a certain sum, each month, to The Mother Church until the new auditorium should be completed. To-day, the children of our Sunday School voted to add their mite each month, and it would do your heart good to see and feel the enthusiasm of these little workers. Truly, "of such is the Kingdom of God." With a joy which no words may describe, and a love purified and chastened, in the exact proportion that sense gives place to Soul, I remain,

Your grateful and loving student,

LAURA C. NOURSE.

Cleveland, O., April 13, 1905.

Rev. Mary Baker G. Eddy,

Beloved Leader:—I want to tell you that I am one of the many beneficiaries of your great work for humanity, having been entirely healed of consumption through Christian Science. I was at one time so emaciated that at night I was compelled to rest my hips on pillows. I have since my healing gained sixty pounds in weight.

Words fail to express my gratitude for this great truth which heals physically, morally, and spiritually.

Lovingly yours,

MRS. EDITH C. FISHER.

Testimonies of Healing.

As a believer in Christian Science, I feel it a pleasant privilege to narrate the circumstances concerning my change of ideas relative to the restoration of health. About two years before I was healed by Christian Science, I had a severe attack of peritonitis, and was confined at home for three weeks. The doctor gave my mother strict orders that I was not to have anything solid to eat, and put me on a diet of olive oil and hot water. He also told me that when I was able to be about again I must avoid being out in wet, stormy weather, as another attack would result in an operation, because it would be unsafe to attempt to pull me through otherwise. As my work keeps me outside all day, these orders caused me a great amount of worry. When I returned to work again, a friend asked me why I did not try Christian Science, and I answered that I did not have any faith in it. In fact, I had always ridiculed it. He told me of many benefits derived from it, and finally induced me to go to a Wednesday evening meeting. I became interested before I knew it. I went to these meetings from time to time, and I was gradually being prepared for a demonstration in healing which turned me to Christian Science. I was suddenly taken with a similar attack to that described above, and when I reached home I was immediately put under the same treatment that the doctor had previously ordered. I told my mother that I wanted Christian Science, but she was greatly opposed to having me experimented upon. I was very decided, however, and a Christian Scientist was called. While he was there I agreed to give up the bandages, medicine, and doctor as soon as I could without exciting the family too much.

This was on Tuesday. Wednesday the inflammation and pain were all gone after a fine night's sleep, and Thursday I was up and dressed. Friday I went to Boston and did a full day's work, which consisted of walking from 9 A.M. to 5 P.M. Although it was a cold, rainy day I felt no bad effects. My friends then concluded that I did not have peritonitis after all, and I quite agreed with them; but had I not employed Christian Science I would have had to pass through the same trouble as before, and probably have had an operation, with the attendant expense of doctors and hospital, besides six weeks from business.

Previous to this experience I was like the average young man, having no religious restraint. The first business I transacted on arriving in Boston was the purchase of a copy of Science and Health and a *Quarterly*. I then commenced studying our Sunday Lessons. This is a safe practice for Christian Science beginners in every case. Before I had been studying Christian Science a month I made the following demonstration. Among my customers was a lady who had been extremely disagreeable to me every time I called. I felt that I hated her; but having had several lessons in the understanding of divine Love, I decided to apply them in her case. Directly on leaving my office for her place I endeavored to realize that she was God's child, and that she never intended to be unkind to me. On my arrival she greeted me with a smile, and assisted me to transact my business, something she had never done before, which proves how quickly we can utilize this truly helpful religion.

Since then I have had many demonstrations of the power of divine Love for good, and the help it gives every day in business and at home.—FRED L. BAUER, Boston, Mass.

I had been more or less interested in Christian Science for a long while, and was glad to discuss it with my Christian Science friends. Finally I said that I would take a copy of Science and Health, which one was ready to lend me, "without prejudice," as lawyers say. I would not agree to read the book, nor was my friend to feel that I committed myself in any way. For years I had doctored for nervous

dyspepsia, and being a firm believer in the germ theory of disease I had used a number of "antiseptic" preparations for catarrh. I read Science and Health, notwithstanding the fact that I was in no way committed to do so, and while reading it I dropped my medicines and antiseptics at one time, and once for all. Since then I have eaten heartily of things which I formerly considered indigestible. Occasionally I have thought to "hedge" a little, by eating rather more carefully, but this has not been successful; I have found that after a careful meal I have sometimes had the most marked return of the old trouble, but that if I ate freely at the next meal of food which I once believed it was not possible for me to digest, even with my habitual medicines, I was conscious of very little trouble and sometimes of none. My inference from this is that Christian Science does not need any extraneous aid, being itself the absolute, all-sufficient truth which sets free those who accept it. Neither have I suffered from any "cold," although I have more than once found myself in such circumstances as I once thought likely to bring one on.

I hold physical healing to be a necessary and vital part of the demonstration of Christian Science, but I hold the chief blessing of Christian Science to be in the insight, comfort, and uplift which it gives in spiritual things. I have to thank Christian Science for my clear understanding of these deeper things, and with this understanding I have found my life changing from one of unrest, worry, depression, and oftentimes discouragement, into a life of peace, content, buoyancy, and confidence. I am convinced from my own experience that Christian Science brings about a great simplification of one's daily life, that it is the extinction of a multitude of little habits which serve no purpose save to consume time and strength which can be used to better advantage. Christian Science does not, however, leave any void in place of the treadmill round of existence which it surely and steadily changes into true freedom; there has come to me not only the sense of having much more time to do what I wish, but also a quickening sense of an increasing number of things which I desire to do and which I feel to be distinctly worth the doing.

It seems to me that in no way can we better show our gratitude to our Leader, Mrs. Eddy, for all that she has done and endured in the Cause of Christian Science, than by striving to make all the acts of our daily life manifest Science and true harmony, while we go on from day to day feeling more and more that she is our dear and helpful friend.—ARTHUR CHAMBERLAIN, Salem, Mass.

To save a sick body I sought Christian Science, but little did I know that the healing of my body was but the call for a full and free salvation from sin-sickness,—from a self-centered life with its resultant defeat. This healing of the suffering body has been the gateway to that all-round healing of the man. Surely suffering was proved to be sin's necessity here. Hate, pride, and selfishness were so long enthroned that the poor heart leaps for joy as the love that passes all words fills it. How good it is to love instead of hate; how good to be meek rather than proud; how good to be selfless and not selfish, to rise from the depths up to the heights of God's love. The same Principle that is doing its perfect work in healing me of hatred, of pride, of self-righteousness, of all the sins and errors of mortal mind, healed my sick body, and I am coming to know God as All,—to know that my real existence is inseparable from His; and that I may reflect the divine character, as I understand and demonstrate the truth.

I should not be here to-day, in abounding health and with praise in my heart, were it not for Mrs. Eddy's life of love. May I ever love and honor that life. I cannot forget the one whose teachings helped me back to life and taught me to walk in the light. May I show my gratitude by loving others as she has loved.—E. C. BARTO, Champaign, Ill.

As I have received so much benefit from reading the testimonies in the *Sentinel* and *Journal*, I will add my mite, in the hope that it may help some one, journeying up the hill of Christian Science, in the endeavor to overcome self. Eight years ago I was a slave to the liquor and tobacco habits, which had been growing on me for five or six years, and I was healed in Christian Science in one week's treatment. I have since been healed of blindness. In February, 1901, I became totally blind. One eye was healed in two months, while the other would get better and then worse. This condition continued for two years and a half, but my faith in God and Christian Science was never shaken, for I knew that when a clearer understanding of this truth came to me, I would be completely healed. In March, 1900, I had the privilege of class instruction. A short time ago I called upon my teacher and she asked about my eyes. I told her that one eye was perfect but that I could see very little with the other. I had worn glasses for two years for one eye. My teacher asked if I could see without the glasses. I told her I could, but that I had not overcome the universal mortal belief that my eye and head would ache if I left my glasses off, even for a few minutes at a time. She told me to take off my glasses and not wear them any more, and if I had any spare time, to improve it by realizing that in God was my sight, and that there could be no defect in what God knows. I immediately removed the glasses, and am very glad to testify that my eye is completely healed. I was also healed of appendicitis in five days. These are only a few of the many blessings I have received through Christian Science, for which I am truly thankful to God. I am also grateful to Mrs. Eddy for living so pure a life that she was able to give us this saving truth which makes us free from every form of disease and sin.

H. J. KELSEY, Denver, Col.

I have often told others of my experience, and the great benefit which I received from treatment and the study of Christian Science, and hope that some poor sufferers who may read this testimony will be benefited by it. I was a victim of cancer on the neck, which had eaten into the cords or ligaments. It was annoying and was becoming dangerous. I had tried all kinds of doctors and medicines, but continually grew worse, becoming weak, nervous, and disheartened. I was told of Christian Science by my son, who had gone to consult a Christian Scientist about the case, and as he seemed to be so interested in the subject, I resolved to see what was in it. To make a long story short, I received nine treatments and was healed. My health has been perfect ever since, and I am thankful to God and glad to realize that He is always with us. I give little thought to anything else, and I hope that other sufferers from any form of sickness or sin may be led to try Christian Science and be healed.

It has been proven to me that God is "a very present help in trouble."—K. E. DRYSDALE, Kansas City, Mo.

I shall always bless the day I came to Wiesbaden, for it was here I found the great treasure, Christian Science. I cannot express in words my gratitude to God and to our dear Leader. The physical healing seems the least, though I am very grateful for it, as I was ailing frequently. I left off wearing spectacles, which I had worn for fifteen years. A weakness of the throat, which had troubled me from childhood, vanished, and thanks to Christian Science, I am now in perfect health. But what is all this, compared to the spiritual uplifting! How harmoniously everything comes to pass, if we put our trust in our heavenly Father only, and are led by Him, listening to no other voice but His! The peace and joy which pass all understanding cannot be expressed in words, but our dear Leader tells us in Science and Health that God will bless our every effort, however feeble, to help ourselves and others.

IDA MUHLENBRUCH, Wiesbaden, Germany.

The miserable life I lived prior to my healing through Christian Science is a story of sin and despair, and let me say right here, that these words of St. Paul's are the beacon which is my salvation: "This one thing I do, forgetting those things which are behind, and reaching forth unto those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." I was a great traveler, contented nowhere, seeking peace in different cities, but finding none. My chief aim was to beat the railroad companies out of their just fares, and such things as that did I strive for, never seeking to help any one or to make any one happy but myself. Not one good thing did I seek after, all was evil.

Now all this is changed, and I truly feel as if I had been born again. Since studying the Bible with Science and Health as its key, I am striving more each day to put self in the rear; striving for other people's happiness; striving to be honest and pure, and to overcome sin in every form. Christian Science is surely a blessing, for that and nothing else has superinduced this changed condition.

I have for a long time wanted to write and tell something that my mother said shortly before she passed on. It was to me a most startling statement. She came into Christian Science late in life. She had raised a family of nine children, and some of them, especially myself, had caused many a gray hair in her dear old head, yet she said, after she was past sixty-five years of age, "If I could know Christian Science, I would be willing to live my life over again."—E. J. MYERS, Chicago, Ill.

Six years ago I was a great sufferer from acute indigestion, nervousness, insomnia, chronic constipation, and sick-headaches. I have been healed of all these since taking up the study of Christian Science. The last of these ailments to yield to the touch of Truth was sick headache, but by knowing that my real self never had a headache I overcame that fear. It is about five years ago since a few of us met together to study the Lesson-Sermons, and the outward manifestations are proof that our search for Truth has not been in vain. We now have a little church of our own, furnished cosily. We organized as a church a year ago last winter, with nine charter members, and in the spring six of that number were admitted to The Mother Church, of which I am pleased to say I was one. One of the members had joined previously. Words fail to express my gratitude to God, the Giver of all good, to Christ Jesus, the Wayshower; and to Mrs. Eddy for Science and Health.

MRS. G. M. HALL, Winlock, Wash.

For several summers before coming into Christian Science, I seemed to suffer a great deal from heat, sometimes being nearly prostrated during the hot weather. I also suffered from a very painful disease which material remedies failed to cure. After reading Science and Health for a short time I could truly say that all things were new, that old things were passed away. My diseases were blotted out, forgotten, which showed that they never really existed. The physical relief was great, but not to be compared with the spiritual uplifting gained. Since then I have had many proofs of the power and presence of divine Love to destroy all error.

I wish to speak of one case of healing. My youngest son when eight years of age had his finger crushed in the cog-wheel of a job printing-press. Although he seemed nearly crazed with the pain, and my own fears were very great, I took Science and Health and prayed and read. In less than an hour all pain had stopped, and he had no more trouble with his finger. In a few weeks, when the healing was complete and the bandage removed, his joy was unbounded, as he exclaimed, "Why, mamma, this is the best finger I've got." The doctor had thought an operation necessary, but through the power of Truth his finger was saved and he has had

perfect use of it ever since. Although at times the way has seemed dark, divine Love has always delivered me, and I desire to express my gratitude to God for the gift of this blessed truth. I am also grateful to Mrs. Eddy for transmitting it to mankind.—MRS. ELLA H. SMITH, Jamaica, Ia.

About a year ago I met a friend whom I had not seen for over a year, and who had in the meantime turned to Christian Science. He spoke a few words to me which planted the seed of truth. I at once felt its power, and through the diligent study of "Science and Health with Key to the Scriptures," I have been able to stop smoking, a habit which had been, so to speak, part of my life for thirty years. I have also received great benefit from the study of the Manual of The Mother Church, and have been able to overcome many forms of sin and sickness. I would like to say, too, that the study of these works, especially Science and Health, has given me calmness, buoyancy, and hope. From the very first I have felt the greatest respect, love, and gratitude towards Mrs. Eddy. I am also very thankful to those in attendance at the Reading Room for the assistance I have received from them.

E. Y. STEELE, Ottawa, Can.

I wish to express my gratitude for having Christian Science placed before me in form of proof. The first time it was mentioned to me I was living in Seattle. Going into a neighbor's house for a moment, I found she had been washing during a very warm day, and she said, "I could not have done this three years ago." I asked why, and she said she had been bedridden for fifteen years. "How were you cured?" I asked. "Truth healed me," she said. I expressed my surprise and lack of understanding by a blank expression and some incredulous remark, and she then explained more clearly what she meant. When she told me that Christian Science healing was in strict accord with the Bible and with Jesus' teachings, how I rejoiced! I told her I wanted to read of this wonderful teaching. I had been raised in an orthodox church, my father was a preacher and my mother a conscientious follower of the church discipline. I had joined it when young, but after marriage had drifted away from old friends, and had never found a church whose teaching answered the many questions which had puzzled me for years. I had dropped the reading of the Bible, and was as a ship without a rudder when Christian Science replaced the Bible in my hand and Science and Health opened up its hidden treasures to my understanding. I was always a seeker after Truth from childhood, but no one had been able to answer my questions or give me anything more substantial to thrive upon than blind faith, which did not satisfy my craving. I was not in immediate need of physical healing, but, oh, how much in need of spiritual knowledge! I never questioned or antagonized Christian Science, but took it all as truth, for did not the proof follow every assertion? Did it not also teach in a common-sense way? When a statement is made and proves itself, that is sufficient.

It is now over eight years since I began the study of Christian Science. I am blessed every day by using the understanding I have gained through the study of Science and Health, the Bible, the *Quarterly*, and by visiting those who have been long in the work. I have had many demonstrations for myself and family of seven. There is a growing church here of about one hundred members, and much good work is being done.

MRS. LUELLA S. MOON, Missoula, Mont.

The *Sentinel* and *Journal* are very helpful to me, and I am thankful for them in every way. Some years ago, when I first heard of this truth, I was in very poor health, nearly

always in pain of some sort, and taking medicine daily. I was unhappy and discontented, and seemed to lack nearly everything that I needed. I longed to believe that Christian Science could heal, but it seemed too wonderful to be true. The first time I tried it was for our little boy. He had always been subject to severe coughs and colds, and this time his coughing was so painful and distressing that I was in a state of fear difficult to describe. I tried every known remedy, it seemed to me, and finally I thought I would go to a Christian Science practitioner and see if there was anything in it for us. The cough yielded to treatment almost immediately, and I cannot tell how happy I was to know that Christian Science does heal. From that time I began studying in earnest, and have been healed of many difficulties. I had been taking medicine daily for one trouble, and this was healed first. Rheumatism, indigestion, and other inharmonious conditions have also been overcome. My children were brought through scarlet fever in a very few days, and were in better health afterwards than before, thus breaking the supposed law that this disease will leave bad after-effects. They have also been helped in many different ways. The sense of limitation has been overcome in a large degree, and life seems full of wonderful opportunities for working for God and humanity. I know that each day will bring to me a better understanding of this truth, and I am glad to express my gratitude to our dear Leader for her life and work.—BERTHA N. HATCH, Milwaukee, Wis.

It seems wonderful how blessed we are, although only in the infancy of our demonstrations in Christian Science. I have had many beautiful proofs of its utility, both in the healing of physical disease and the lightening of mental burdens. I know of no condition in my life which has not been bettered since I have known of it. As a child I had a great fear of death, which was not lessened as I grew to womanhood, and although at times I used to think I would like to die, if I could thereby get out of all my troubles, I was nevertheless very much afraid of death for myself, and to think of any one I loved passing away brought even greater distress of mind. My thought of death has been so changed that when recently I had this experience, in the passing away of my mother, I was wonderfully comforted and sustained.

It is surely no wonder that our hearts are filled with love and gratitude to Mrs. Eddy, through whom so much good has come to us.—JESSIE E. SLOWEN, Billings, Mont.

My heart is filled with gratitude to God, and to Mrs. Eddy, for all the blessings which I have received through Christian Science. It healed me after twelve years' suffering. Physicians had tried all their skill; three operations had been performed, and all kinds of treatments and medicines were applied, till the fourth operation seemed to be necessary. Seven weeks' treatment from a Christian Science practitioner in San Francisco, with earnest study by myself, accomplished my healing. Through it came peace and rest which I had missed nearly all my life. Three and a half years ago, at the beginning of my treatments, I read the New Testament for the first time. How glorious was the allness of God revealed to me in reading Jesus' teaching, after I had read Science and Health. My earnest desire was then to see the signs follow "them that believe." God answered my prayer, and I saw many signs follow, through my little understanding of how to think right about God and His relationship to man. I know that with earnest striving to become better, great joy is in store for me, as I help to bring to suffering mankind health and happiness. Words are insufficient to express my gratitude for the unbounded blessings which have been brought to our household.—MRS. JOHANNA BEHRENS, Los Angeles, Cal.

On the first of July, 1903, I was given up to die, by one of the best doctors here. I was propped up with pillows when a dear sister came in. She asked why I did not try Christian Science. I did try it, and oh, how thankful I am to God, who is Love, and to our dear Leader for telling us how to commit our way unto God and trust in Him. I had several diseases,—among others, Bright's disease, heart trouble, and indigestion,—but worst of all was the trouble with my head, which had to be kept covered all the time. After an earnest prayer to God the cloth was thrown away, and the next day my sister told me that a practitioner would give me absent treatment, as she could not leave home.

For two weeks I did not see the practitioner, but she began to treat me on the 3d of July. I was so much better that my daughter, who had come to see me die, left for her home. I gave my house a good cleaning, which I had not been able to do in a long time. On the 4th, I went with my husband and little girl to the island, walked all about, and did not feel any ill effects. I knew I was healed, and in two weeks I went to the Christian Science church, although it is a long distance to walk. There I found those who evidently had a real trust in God, and now I am one of them. I read Science and Health as a help when I get disheartened. My little girl had yellow jaundice, but it was overcome in one day, and my husband has been helped also. I am grateful to God who has let me help others and show them the true way. I never tire of telling what God has done for me.

MRS. MARY C. WILLIAMS, Charleston, S. C.

Over two years ago I was drawn to Christian Science by the reading of a *Sentinel* that was given to my husband. He brought it home, and I took it up and began reading the testimonies, which seemed very beautiful to me. I never before had any idea of what Christian Science is, and as I had tried almost every remedy that could be thought of, and was still getting worse, it was not hard for me to give up all material remedies and try Christian Science. I sent for a practitioner, and with the first treatment I was healed of a serious stomach trouble. Since then I have been healed of many other ills, and have had many beautiful demonstrations for myself.

Last summer I was attacked with blood-poisoning, and as I found that my fear was too great to overcome it, I sent for a practitioner. To sense there was a well-developed case of blood-poisoning and gangrene, which took several weeks to heal, but during this time I did my housework as usual and did not lose even one night's sleep. Truth was the victor, and while I am not yet entirely free from stiff joints, I believe that I will soon overcome the enemy and be free. With all these many blessings, the spiritual uplifting has been the greatest. May God bless those who are giving their time and labor to this Cause.

MRS. A. D. OGBORN, Chanute, Kan.

I have had many beautiful demonstrations of God's care through Christian Science, which has taught me how to trust and rely on God. Some months ago I fell headlong down a steep stairway, and to sense was nearer dead than alive. I was confined to my bed all day, but as soon as word could be sent to my practitioner I was better, and at nine o'clock that night I was entirely free, and I shall never forget the sense of peace which I had. The next morning I arose and went about my work as usual, to the surprise of all my friends, as the paper had stated that it was a serious fall.

Before closing I also wish to express my gratitude for the poems in the *Sentinel* and *Journal*; they have comforted me, and enabled me to comfort others many times. For all that Christian Science has done and is doing for me I am truly grateful.—SALLIE G. WENTZ, Bucyrus, O.

From our Exchanges.

The faith of a child is a tender shoot and is not fitted to endure the frost and chill of unbelief, but in itself it is of the purest quality and sweetest spirit. It has freshness and loveliness. The period of childhood in the seclusion of the Christian home and entirely protected from the doubts and denials of the great complex world is a vantage-ground for fixing and forming faith. There is often a want of confidence in the real faith of a child on the part of parents and teachers. They question and hinder its faith and put off the little believer until some time when it may understand these things better. Parents are often the greatest sinners against their children by their unsympathetic and severe criticism of the religious activity of mind.—*The Watchman*.

Christianity—the Christianity of the first century—not that of the creeds of later centuries, but the Christianity of Christ, the anointed, if we discern rightly the signs of the times, is to be the dominant religion of the world. That comes not only to princes, but to peasants; not only to the rich, but to the poor; to all classes and conditions of men. It clasps the white hand of the innocent child, tenderly, reverently; it clasps just as tenderly, reverently, the hand of the returning sin-stained wanderer. To one it says, Of such is the kingdom of heaven; to the other, Though thy sins be as scarlet, they shall be white as snow. It sees in the pure-hearted little one, and in the repentant prodigal, children of the same Father, of the Father from whose love nothing can separate those whom He has created.

The Universalist Leader.

A man's sermons begin in his soul, not in his study, and his influence is determined by what he is in the rectory or the parsonage, much more than by what he is in the pulpit or the chancel. Conscientiousness is the quality of all honest men, but a minister may be eminently conscientious, and almost as eminently unfruitful in his work. It is not fundamentally a matter of duty; it is a matter of devotion to one's work, and passion for one's people. The real preacher is the man whose soul is on fire, not with wrath, but with love.—*The Outlook*.

There is nothing regarding which we require to admonish one another more earnestly than the necessity of serving the Lord in natural ways, accepting with grace and gratitude the humblest task which he assigns. The size of our work is a thing of no moment whatever. Not the work we do, but the way in which we do it determines our character.

REV. JAMES M. CAMPBELL.

The Homiletic Review.

Ecclesiastical usage has narrowed down the meaning of the term "holiness" into a synonym of purity or innocence, or of devotion to what is believed to be divine. The expression always leads the thought in the direction of religious or churchly sanctity. But by nature and derivation it has a robust and suggestive significance. It means wholeness, haleness, health.—*New Church Messenger*.

Nothing so stimulates the man or woman who practises the gospel of hard work as honest expressions of gratitude. They indicate far more than appreciation, as this word is generally understood. They show refreshing receptiveness of mind, and gladness to give credit where credit is due.

American Agriculturist.

The Christian religion is practical. It regulates our conduct and directs our steps. Let no one be deceived by the error which teaches that it makes no difference about our conduct so our hearts are right. If the heart is right the life will be right also. "A good tree cannot bring forth evil fruit."—*The Christian Advocate*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.

Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2 50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

Many buildings in Copenhagen were decorated with American flags on the Fourth, in honor of Independence Day. The yachts in the harbor were elaborately dressed. The hotels were crowded, and several dinners in celebration of the Fourth were given.

From Colon to Panama enthusiastic crowds celebrated the Fourth. At Colon and Corozal addresses were delivered by Governor Magoon and Judge Gudgey respectively. President Amador and Governor Magoon on that day officially inaugurated the new water supply of Panama.

The Americans at Carlsbad celebrated the day with a banquet. The speakers included Herr Conried, director of the Metropolitan Opera House at New York, Harry Rubens of Chicago, and a number of Austrian officials.

The American colony at Berlin celebrated the Fourth of July with the usual steamer excursion on the river Spree to Gruenau, where there were baseball games and other sporting events. In the evening a banquet of three hundred and fifty covers was held, at which, however, formal addresses and other customary features were omitted, out of respect for the memory of Secretary Hay.

It is announced that the Department of Agriculture has prepared and is ready to begin twelve thousand suits against the railroads of the country, to secure the imposition of a penalty of \$500 in each case, for every violation of the so-called twenty-eight-hour law. The statute requires carriers transporting live-stock from one State to another to unload, feed, and water, and rest every head of live-stock for a period of five hours after it has been on the road not more than twenty-eight hours. Nearly every railroad from Maine to California is involved. The evidence against them is regarded as so strong that attorneys representing the roads are negotiating with Secretary Wilson with a view to having a minimum penalty of \$100 imposed. The law, which was enacted at the request of the humane societies of the country, has for some years been practically a dead letter, the railroads, in the few instances where they were detected violating

it, preferring to pay their fines to correcting the abuse.

Mayor Edward F. Dunne of Chicago, who was elected on a platform of municipal ownership of street railways, announces, after investigation and consideration, a modified plan, which provides for the incorporation of a company, managed by five men commanding the confidence of the people of Chicago. To this company is to be granted a twenty-year franchise covering the streets in which the rights of the old companies already have expired, or soon will expire. It is to be stocked to the amount necessary to establish a street-car system in these streets, roughly estimated at two hundred and forty miles. No bonds are to be sold. The stock is to be deposited with a trust company which the five directors are to select, so as to prevent a purchase of it and consequent control by outside interests. The stock is to be sold at popular subscription. At any time the city may elect it can take over the property on an appraised valuation.

Twenty-two officials of the big packing companies and four corporations have been indicted by the Federal grand jury. Four corporations and eighteen individuals are named in the principal indictment, which charges a conspiracy in restraint of trade, and a conspiracy to monopolize or attempt to monopolize any part of such trade or commerce, in violation of the Sherman anti-trust law. Penalties for violations of either of these charges are a fine not to exceed \$5,000, and imprisonment not exceeding one year, or both, in the discretion of the Court. Four other individuals are named in a separate indictment, which is based on the provisions of the Interstate Commerce law, making it unlawful to solicit or receive any rebate or concession in respect of the transportation of any property in interstate or foreign commerce. The penalty prescribed under this charge is a fine of from \$1,000 to \$20,000.

George R. Carter, governor of the territory of Hawaii, who recently tendered his resignation, is on his way to Washington to consult with President Roosevelt. Carter's resignation followed closely the announcement of the result of the territorial elections. His views on certain matters pertaining to Hawaii differ from those of the President, and he resigned in order that he might discuss them with the President without prejudice.

Incomplete data of the Fourth of July accidents give the following figures: Dead, 54; injured, 3,157; divided as follows: fireworks, 1,258; cannon, 204; firearms, 446; gunpowder, 706; toy pistols, 373; run-aways, 80. The fire loss is \$251,317.

The list of dead is the largest but one of any year since 1888. The list of wounded has only been surpassed once—in 1893.

The actual deficit of the treasury for the fiscal year ending June 30, 1905 was \$23,087,752.10. The total receipts were \$543,423,850.24, and the total expenditures, \$567,411,611.34. For the fiscal year 1904, the total receipts were \$541,515,644.40, and the total expenditures \$582,560,086.06.

Elihu Root has accepted the position of Secretary of State. It is reported that he gives up an income of two hundred thousand dollars a year to accept this position, which carries a salary of only eight thousand dollars.

Secretary Taft and his official party and friends and Congressional Committee sailed last week from San Francisco for Manila for a tour of investigation.

Foreign.

The Boxer indemnity question has been satisfactorily settled. All the powers have signed a note accepting the proposals of China, formulated October 26, offering to consider the indemnity a gold instead of a silver debt. All the powers will be paid in gold by telegraphic transfer, except Russia,

which has chosen payment in silver according to the laying-down price in Shanghai.

Russia has named as peace plenipotentiaries, Count Muravieff, former Minister of Justice, and present ambassador at Rome, and Baron Rosen, the new ambassador at Washington. Japan's representatives will be Baron Komuta, Minister of Foreign Affairs, and Minister Takahira, who has represented his country at Washington throughout the war. The Portsmouth, N. H. Navy Yard has been announced as the place of meeting.

It is estimated that the Indian Army, as reorganized by General Lord Kitchener, will require an increase of \$10,000,000 for maintenance. The expenses of the establishment last year were \$1,000,000 more than for any former year.

The piercing of the second tunnel through the Simplon was completed during the night of the 6th. The first tunnel through the Simplon was completed February 24.

Industrial and Commercial.

Present indications are that the total first-cabin departures for the current calendar year will be much in excess of 1904's total, which was the highest ever known; and that outward-bound cabin passengers of all classes from all parts of the United States will exceed two hundred and fifty thousand, against a highest previous total of about two hundred thousand. If \$750 be taken as the average expenditure, two hundred and fifty thousand persons will expend abroad nearly \$200,000,000 in the course of the present year.

The law passed by the Kansas Legislature last winter, appropriating \$410,000 to build an independent oil refinery at Peru, has been declared unconstitutional by the State Supreme Court, in an opinion rendered by Associate Justice Greene. The oil-refinery law was considered one of the most direct blows struck at the Standard Oil Company by the last Legislature, which adopted several measures tending to restrict that concern in the handling of the Kansas product.

The general superintendent of the postal card mill at Rumford Falls, Me., has announced that during the month of June, one hundred and ten million postal cards were shipped from the factory. This is the largest monthly shipment of postal cards ever made since the first issue, May 1, 1873.

The New York Health Commissioner reports that 1,091,291 pounds of adulterated food was detected and condemned by his inspectors in New York City during the single week beginning June 18.

General.

A relay carrier pigeon race between St. Louis and Boston was recently arranged, and a message from the mayor of the former city to the latter was delivered. Eight days were required for the flight from St. Louis. The birds were released from the steps of the St. Louis City Hall at eight A.M. on Saturday, June 24. The relays were as follows: St. Louis to Louisville, 240 miles; Louisville to Cincinnati, 100 miles; Cincinnati to Pittsburg, 250 miles; Pittsburg to Washington, 175 miles; Washington to Philadelphia, 125 miles; Philadelphia to New York, 80 miles; New York to Pawtucket, 155 miles; Pawtucket to Boston, 30 miles.

The message delivered by the birds was as follows:—

"The mayor of the city of St. Louis transmits greetings to the mayor of the city of Boston through its carrier-pigeon messenger, and if successfully conveyed, will demonstrate a long flight, which is infinitesimal to the long and future prosperity that we wish to the people of the city of Boston."

A colored woman, Miss Jessie R. Fauset, has carried off the highest honors of the Senior Class at Cornell University, the only woman of her race in the College of Arts, and the first woman of her race to win a Phi Beta Kappa membership.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Water.

M. G. KAINS.

A MOUNTAIN spring has a charm for all as it bubbles up from its pebbly basin in the rocks, clear, cool, enticing. Who is not tempted to taste, and taste again? What question arises in the mind as to its purity? It comes from above, where the clouds have dropped their burden of rain and snow on the mountain crest. Thence the water finds its way through crevices in the rocks, and seeps down, down to the channel, and appears as a spring. It is pure, it cannot be otherwise.

Let us follow it in its course down the mountain. It starts, a tiny rivulet, soon to be joined by others, limpid like itself. With these it becomes a brook, gains strength to grind its rocky bed, carries sand and stones to lower levels, dissolving soluble matter which it holds, perhaps unseen. Here it forms a tiny cascade, there a pool; again it pauses in a dark, deep tarn which mirrors the clouds and the stars, still clear, cool, beautiful. Thence it passes over a clay bottom, which it rubs and tears and carries downward bit by bit. No more it tempts the thirsty; it has become sullied. In turn it serves a miller's, a manufacturer's, a city's uses. Gathering impurities, it continues its course to the sea, there to lay its burden down.

All this time it has been the same water that started from the heights. The impurities which it carries along are not a part of it. This the experimenter may prove for himself by filling a large glass tube full of muddy water, allowing it to settle for an hour or so, and then adding a few drops of lime water to the muddy liquid. Soon thereafter little particles of mud will form at the top and fall to the bottom, and the upper water will become clear. This will continue till the whole is transparent, the mud having settled at the bottom. The soluble matter is still there; but most of this may be destroyed by boiling or aëration; or, to prove that the water is unchanged in its proper self, it may be distilled. This process is final. The water is seen to be the same limpid liquid that fell from the clouds with no trace of foreign matter in it, and when it is thus rid of its impurities no one remembers or thinks of its former pollution.

In nature the impurities disappear in the sea. Here the dashing of the waves aërates and destroys a part of the foreign matter, another part falls to the bottom, still more feeds animals innumerable. But, more remarkable, the sun drinks up the water from the ocean's surface, pure as it has always been. In fact, nothing has changed or polluted the water itself. It has always been pure water—water only. It is as it was in the beginning, when it fell from the clouds to which it had been raised by the sun, days or months or years before. At all times during its course downward it has been the same, and at any time the mud which made it unfit to drink could have been cast out by distillation—the sun's own process.

What a striking analogy all this presents to the course of truth in human consciousness! Like the water, truth, in itself, is unchangeable, unmodified, perfect. In coming from its native source, truth is forever like the mountain

spring,—pure, satisfying. As it descends from the heights and appears to human consciousness, it seems to be less desirable, because it is apparently blended with error, elements of human belief, the earthiness which is borne along with it.

This is apt to characterize every human concept of truth, but it is unquestionable that the one truth which underlies the statements of prophet, psalmist, or apostle, has always remained pure, in spite of the accumulations of erroneous opinion which to human sense have been associated with it.

No Christian questions that Jesus meant what he said, and all affirm that he not only spoke the truth, but understood how to utilize it. His followers also understood its practical value for about three hundred years. And yet, in the centuries that have intervened since those days, the statements handed down in the Bible have become so beclouded by human opinion, that for the great mass of mankind they have no significance beyond that of a mere historical record, and for many they have not even that. From these differing human opinions have sprung all the vagaries of sectarianism, the questionings of agnostics, and the denials of atheists. There are in America more than one hundred and fifty sects claiming to follow Jesus' teachings. Many of these hold ideas diametrically opposed to those of others, and yet all will assert that Jesus can have taught but one truth. Unquestionably the book honored by all these sects contains the truth. Now what was once true must always be true; change in it is impossible; truth cannot be sullied by error. Only by tracing the truth, like the stream, back to its source, or by some test that will prove unquestionably its verity, can truth be demonstrated to be true. All Christians admit its source, and a very great number of honest thinkers are recognizing that the philosophy of this demonstration is revealed in Christian Science. This, with its invincible logic, eliminates from human consciousness the falsities and contradictions which have so long seemed to taint the truth,—the pure water of Life,—and to-day, as in Jesus' time, the truth is verified through the healing of both sin and sickness, which is of vastly greater significance than any array of logic.

This scientific process of demonstration discloses the power of perfect Love to cast out fear and all its phenomena; to correct and destroy the impurities which have defiled human consciousness. In tracing the stream of truth to its source,—divine Mind,—the seeker drinks daily of its life-giving water, and knows it to be that which refreshed prophet and apostle in bygone days; and to-day Christian Science invites all who are athirst to come and take this water of Life freely.

Some Experiences.

ALICE DAYTON.

AN early experience in Christian Science, illustrating the scientific use of the word Soul, comes to thought with the study of the Lesson on this subject. A group of persons unenlightened by the truth which is revealed in "Science and Health with Key to the Scriptures" by Mrs. Eddy, were reading the Bible together. A young student of the textbook came among them, and, being invited to give her thought, she quietly said, "You use terms differently from

what I have learned; Christian Science teaches that there is but one Soul."

St. Paul once wrote,—“I would rather speak five words with my understanding, . . . than ten thousand words in an unknown tongue.” These few words certainly had behind them an understanding beyond ordinary thinking, and they caught the attention of one, at least, who was present, thus proving the power of the message in Science and Health. By this ray of light, thrown upon the consciousness darkened by material beliefs, was shown the way of escape from false and discordant mental and physical conditions. This, also, was the turning-point which changed the life-motives of one who was present, and brought to Christian Science a student who never ceases to be grateful for that reflection of Truth. It so distinctly revealed the great distance between the definite, positive teachings of Science and the uncertain theories of men. Our Leader is the benefactor of mankind, in that she has herself demonstrated the permanence and power of Truth, and given to human thought a rod and staff which comfort—not a frail material prop which breaks when the least reliance is placed upon it.

For this, as for many other benefits which Christian Science has conferred, my heart is profoundly grateful to God, and to His messenger to this age. To give as she gives; to love Truth as she loves, must prove a worthy motive, and be an inspiration which will produce grateful and fruitful lives. Some helpful thoughts as to “giving” have come to me from my own experiences, as well as from those of other students, which may benefit many. At the call to build The Mother Church, twelve years ago, the evidence of the senses was that I had very little money to give, but there was a warm heart and a loving desire to aid our Leader in her purpose.

An appeal for funds, in *The Christian Science Journal*, and a circular letter to the college students, presenting the needs of the Cause, brought me face to face with my apparent inability to respond. With tears of grief, my desire was laid before God, and the answer came immediately. You can give love—that is something which reflects the divine substance, and is acceptable in God’s sight.

Satisfied, I rested, until six months later, when a gift of a few dollars came unexpectedly. Instantly I recognized my demonstration. It never occurred to me to apply this money to any other service than that of the church. I knew that my greatest need was spiritual; if that were met, all other needs would be supplied; and they have been. At the next call for funds to complete the building, I was rejoiced to respond with ten times that amount. When the call came to “enlarge The Mother Church,” the tithes laid by for the service of Truth were all ready and waiting.

Early in my acquaintance with Christian Scientists, I heard a student say that we should regard opportunities which our Leader gives us for sharing in the work of establishing the Cause, as blessed privileges. I have loved to take this view, and find it to be the true one. Another student gave this thought: Christian Science teaches that giving and receiving are synonymous. He had found that when he believed he had nothing to give, he thus limited his capacity to receive. He saw that if he would receive, he must “make channels for the streams of love where they may broadly run.” He proved that “ceasing to give, we cease to have, such is the law of Love.”

I was told the interesting experience of a lady who practised the laying aside of one-tenth of her income for the Cause of Christian Science. She felt that she owed this to God, and always paid this debt first. Although in limited circumstances, and dependent upon her own efforts for support, she always had a fund on hand from which to draw, and was counted the most cheerful giver in the Christian Science Society to which she belonged. She had adopted the rule to be always ready.

Another case which proved that giving to God’s Cause

does not diminish, but rather increases our financial ability, is the following. A lady decided to give a certain amount to the Building Fund, when two sources of revenue were cut off. The thought that she could not afford to give came to her, but remembering her privileges, she said, “Get thee behind me, Satan; I’ll double the amount.” She did, and in a few days a considerable sum of money came from an unexpected place. She was very happy over her victory.

The time to glory is when one takes off the armor, not when putting it on; yet as we struggle to gain a sense of the supremacy of Truth over error, and take our place as “living stones” in Truth’s structure, we may well keep our gaze fixed on the goal, and encourage one another as we see the good and reflect it. We certainly are safe when we remember that our sufficiency is not of ourselves but of God, as our Leader has shown us.

Testimony of a Clergyman.

REV. MARTIN SINDELL.

THAT “Truth is . . . stranger than fiction,” is apparent when one reads the many beautiful testimonies in the *Christian Science Sentinel* and *Journal*. In no other periodicals, so far as I know, is there such an abundance of “good news,” all testifying to the saving and healing power of divine Truth.

For centuries, wherever the Bible has been read, people have gleaned from its pages the blessed truths, “God is our refuge and strength, a very present help in trouble,” God “healeth all thy diseases;” “Ask, and ye shall receive;” and many similar passages, all pointing to the fact that God does care for His children; that He is not afar off, but ever-present; and that if we but realize the truth, life can mean all that our Creator intended it should mean. As we read the tear-stained pages of mortal history, we can readily see that the way has been hedged about with “thorns and briers” (mortal beliefs, material interpretations of Bible truths), and thus countless thousands have failed to make practical the numerous Scriptural promises; have failed to find the blessed panacea for all human ills and sorrows.

During several years’ experience as pastor in a certain religious denomination, I found myself “lame” when present in the sick-chamber, for all too often my prayers were unavailing. It frequently occurred that, when cases were thought to be critical, the pastor was not permitted to enter the room of the sufferer, lest his presence should excite the patient and thus hasten the end. But what of the doctor? These things were “food for thought.” In the fifth chapter of James, we read, “Is any sick among you? let him call for the elders of the church; and let them pray over him. . . . And the prayer of faith shall save the sick.” I had great faith in the doctors during the years of my pastoral work, even as I have great respect for many of them now; still, I could not see that it was according to Scripture to call an M.D., and let the pastor learn of the patient’s illness in the best way he could. Since becoming a Christian Scientist, my opinion on that point has undergone no change. It never seemed right to lean wholly upon medicine; and then, perhaps late in the day, have prayers, if convenient.

Clergymen have as much time to think as most people, so I thought, and my thinking, together with a yearning desire to be more helpful to suffering humanity, finally brought to me that light in which there is no darkness, that truth which contains no error, and that sense of life which is indeed more abundant. For years previous to becoming a Christian Scientist, I believed that God had not taken the healing power from His children; but just how to find that power and how to apply it, I did not know. I became somewhat discouraged over my work and my inability to make practical use of the wonderful truths which I loved. At that time the way seemed open to start a public reading room.

We were living in a village in eastern New York. When the reading room was open, and various individuals had contributed books and numerous periodicals, a good woman from Troy (God bless her!) sent us some *Christian Science Sentinels* and *Journals*. I did not condescend to read any of them for several weeks, but finally picked up a copy of the *Journal* and began to read. Strange as it may seem, it was a case of love at first sight. There was the truth for which I had been longing. I knew it was the truth, and did not stop to question it,—did not desire to question it, for I found it to be in harmony with Scriptural truth. From that moment much of my time was spent in reading Christian Science literature. All the *Sentinels* and *Journals* in the reading room were read—fairly devoured. Then came the reading of *Science and Health*, which I read aloud to my wife, who was just as hungry for the truth as I was. During that first reading of our precious text-book, I exclaimed more than once, "I do not see how a person could write like this unless she were inspired." My thought on that point has not changed since then, though my views of inspiration have been modified to some extent.

If there is one person in all the world to whom I feel devoutly grateful, it is that dear woman who has given us "Science and Health with Key to the Scriptures," and who to-day works unceasingly for the welfare of humanity. Before my pastoral duties terminated, I had taken class instruction, and can truthfully state that I felt happier over the knowledge thus acquired, than over the degrees which had been conferred by college presidents in former years. My good wife was with me in all this study of truth, and together we decided to leave our church, though we knew not where to go, nor what to do to support our family of four children. In the midst of winter my pastorate ceased, and work (manual labor) was sought, but without results. Divine Love led the way, however, for in a few weeks the work which we loved and desired above all other things to do, was given us, namely, to "Preach the gospel," and to "Heal the sick," as we understood how to do it in Christian Science. Never, since reading that first *Journal*, have I used one drop of medicine. Through my understanding of Truth, I have been enabled to help my own family, as well as to bring health, peace, and happiness to others, and I press on in the endeavor to gain more of the Mind of Christ.

Success.

JOHN MERRILL.

THE secret of a happy and successful life is in having a consciousness filled with the realization that God is all-presence and all-power. The secret of a happy and successful day is to know God, and to be confident that nothing can separate us from infinite Love.

When we first realized these new old truths, it seemed that it could be no difficult task to be ruled by Love and to rule by love. Our anticipations of an immediate realization of the ideal condition of life received something of a rude shock, when we attempted to demonstrate our newly-gained sense of Truth, and learned a little of the obduracy of the claims of the flesh and the immensity of the work to be done. The limiting fears and beliefs of mortal mind, so long believed, are not uprooted in a day; the attainment of peace and harmony is the result of mental and spiritual growth. Jesus prayed, "As thou, Father, art in me, and I in thee, that they also may be one in us," and in this prayer He revealed man's glorious possibilities.

Christ Jesus commands all men to follow in his steps. His marvelous demonstrations were the result of growth in grace. Thirty years of preparation, of self-immolation, and of spiritual communion preceded his great work for mankind. If the great Teacher required this long period for growth, how much more necessary it is that his disciples give their entire time to the same lofty endeavors. The plant must have its silent undergrowth, the individual his

silent spiritual development. Expression depends upon impression, that which is felt within; demonstration depends upon spiritual attainment, inward growth, righteousness.

Looking recently at a beautiful sunset, I thought, Why is it that a gorgeous sunset, like exquisite music, oftentimes makes people sad? Then I realized that it is because a wonderful expression of beauty and harmony makes one feel with keenness the poverty of his own spiritual attainment. The kingdom of heaven is within, but if one is conscious of but little sense of harmony within, the prodigal display of the symbols of harmony without emphasizes painfully one's lack. But he who has an established consciousness of the Science of being finds all experience joyous and grand.

Love for God and man must be the controlling impulse, the impervious armor, and the sword. It is the understanding of divine Love that solves all problems, destroys all obstacles, and delivers from all disease and sin. Without love man is without hope and without God in the world. The failure to express love in any thought, word, or act is a departure from the only road to Christly attainment. Success, peace, and happiness depend upon the trueness of the Christly love within; they can be obtained in no other way. Man can help himself only as he dwells consciously in Love, and he can help his brother only as he expresses love. "All's love, yet all's law." God is Love,—the source of all law, and apart from God we plant in vain.

Satisfied.

ADA J. MILLER.

"I SHALL be satisfied, when I awake, with thy likeness." These words have always seemed to me prophetic; they pointed to some "far-off divine event," until I saw that the rest, peace, and satisfaction which Christian Scientists have as overtone and undertone in life's music, are what this verse prophesies. In coming into the understanding of Christian Science there is an awakening. We awake to the fact that man is spiritual, and as we reflect the qualities of the divine Mind we become conscious that we are now God's children, and that sin, sorrow, sickness, death, are errors of thought, false concepts, which vanish as we learn to know God aright. This awakening to the reality of our being, its harmony, its freedom, its "likeness" to the Father, satisfies. It also brings with it new responsibilities: that which we discern, we must make manifest; we must "bring the invisible into full play" by destroying every phase of error with our understanding of Truth. In doing this, we are working out our salvation from a false sense of life, substance, and intelligence. We are praying consistently, "Thy kingdom come." We know that divine Love is ever-present, and this truth, realized, held in consciousness, satisfies.

[Written for the *Sentinel*.]

Pleasant View in Summer.

GRACE WHITE.

The drowsy hum of insects winging
 Their hovering flight from flower to flower,
 The joyous sound of gay birds singing
 From field and fence and hidden bower,
 The garden's bright-hued treasures clinging
 To parent stem in close embrace,
 The roses all a-bloom are swinging
 Gay captives in the warm wind's chase.
 The gentle nymph from chalice flinging
 The sparkling, splashing waters wide,
 Sending the lingering echoes ringing
 Against the fountain's curving side.
 The breezes from the meadows bringing
 From sun-warmed grass its fragrance drawn,
 And wind-tossed trees are gaily flinging
 Their shadows on the grassy lawn.

Selected Articles.

Acts of Kindness.

A stranger was in our city a few days since, and during his sojourn made occasion to view the exterior of our more attractive public buildings. While he was standing in front of the Christian Science church, Mr. Vernal, who is in charge, chanced to open the front door, and seeing the stranger, asked if he would not like to come in and look over the interior. The man did so. Mrs. Cora Fuller Straw, the organist, was practising for the day's services, and took occasion to show the stranger the building and acquaint him with some of its details.

On his return to his summer cottage, he wrote a letter expressing his thanks, which goes to show what little acts of kindness and thoughtfulness will do for those with whom we may fall into contact as we journey on. The letter also suggests that we may not be sufficiently thoughtful or considerate of strangers' entertainment. We cannot realize what good we may do by words and acts that cost us no more than a brotherly interest in one another. Especially is this true of our churches. Those who have traveled through Europe extensively, tell us that the older places are ever open and the stranger is invited to enter. The practice is a good one, and inevitably leads to desirable results. This is made plain also, in that little volume put out by A. Bernard Shaw, entitled, "On Going to Church."

The letter from the Concord stranger follows. We print it that you may derive a lesson therefrom.

"Kearsarge Cottage," Andover, N. H., June 9, 1905.
To Mrs. Cora Fuller Straw, and Mr. S. H. Vernal,
First Church of Christ, Scientist, Concord, N. H.

Kind Friends:—I am impressed to write you this note, to express my thanks and appreciation for the very kind attentions extended to me by you on my accidental call at your church, Sunday morning, May 28.

First, let me say that your church edifice is a perfect gem of architecture, its every line full of gracefulness; many of the details are exquisite bits of beauty, while as a whole it is charmingly impressive and suggestive of purity and peace,—a harmonious and restful inspiration. It appeals to my spiritual sense as some lovely poem, or delightful anthem, crystalized in stone. Had Christian Science given nothing else to humanity, Mrs. Eddy would not have written in vain. Fortunate Concord, indeed.

I am sincerely thankful for the good influences that led me to be opposite your church, just as Mr. Vernal so invitingly opened the doors. But how can I fittingly speak of the kind and friendly spirit that seemed to prompt your interest. Your sincere welcome to me, a stranger—a religious wanderer—drifting alone so far from any spiritual home, out on the shoreless sea of agnosticism—yes, your kindly words and the magic touch of friendly hands were indeed refreshing.

Be assured that so long as I may linger here in my cottage, looking out upon the glories of nature,—her placid lakes, set like molten silver in emerald valleys, with streams of laughing waters forever running to the sea,—or may walk alone under the shadow of great mountains, that ever make me feel the inspiration of a higher life, I shall long to know, oh, just a little, of the great unknowable, and listen with soul, not with ear, if perchance I may hear the welcome rustle of a wing.

At eventide, when the zephyrs from heaven come drifting down from the summit of Mt. Kearsarge, bringing sweet memories of the past,—the charming Sabbath morning it was my good fortune to spend with you, kind friends, in your lovely sanctuary will not be unremembered.

With the thankful heart of a child whose burning thirst has been slaked by a cooling drink from some friendly hand, so, in the same spirit of gratitude, I will say, May the

Eternal goodness bless you, kind friends, and place many cups of cold water in your hands, to give His little ones, who, like me, may perchance wander into the vestibule of your spiritual fold.

Kindly yours,

WILLIAM F. YORK.

P. S. I am reading the literature you gave me, with interest.

Concord (N. H.) Daily Patriot.

Mrs. Eddy's Remarkable Work and Position.

The recent interview given by Mary Baker Eddy, calls renewed attention to a movement which history will record as one of the most phenomenal religious developments in the history of the world. Mrs. Eddy's personal teaching of Christian Science began about the close of the war. The first public and general organization did not begin until about 1880. In the quarter century since there has grown up one of the greatest religious organizations in the world, not only in numbers, but in wealth of church edifices and the intensity of its pervading influence.

More than any other work of the kind known to history, the Christian Science movement has been kept closely under the leadership and influence of one person. Mrs. Eddy, now eighty-four years old, has seen a multitude rise up and call her blessed as the great Teacher of the truth by which they live. Devoutly and without question her judgment is accepted upon all questions relative to organization, practice, and theory; her interpretation of Truth and of Scripture is, with the Bible, the only dependence both for public services and private study; her occasional messages, in poem, hymn, or exposition, are received with ardent affection and reverent response.

This is something utterly new in the experience of the race. No woman has ever before led a great world religion, and such leadership as that accorded Mrs. Eddy has never before been the lot of man or woman, other than the founders of great world religions, and the work of these teachers was in but few cases of large proportions before their death.

Such is the historic significance of Mrs. Eddy's position, quite apart from the intrinsic value of the religious ideas for which Christian Science stands.

When the nature of the teaching, the character of the work done or attempted, and the multitude of disciples it has found are considered, this latter-day phenomenon becomes all the more amazing. Teaching theories which appear to defy all common sense and human experience, attempting to heal disease in a way that is either the height of folly or a reign of apparent miracle, crowding their great churches on Sundays, not to hear personal eloquence or brilliant expositions of truth, but the simple reading of the Scriptures and Science and Health; bringing together on Wednesday evenings crowds quite as large to hear of experiences and "demonstrations"—all this is more remarkable than the personal sway of this modern woman prophet.

But most remarkable still is the fact that there are thousands of persons now in every community, who regard "the blues" as sin, who are afraid only of fear, who regard anger as more poisonous than strychnine, and who test their health and happiness by the love they can generate for all mankind.

Not being a disciple, we could, if we would, find many flaws in the metaphysics of this cult; we could, perhaps, question the success or the marvel of some of its miracles; but this would be an ungracious task. Rather we congratulate society on the coming of a religious faith and teaching which recognizes that Mind has unlimited power; that Love is omnipotent.—*Denver (Col.) Times.*

Truth is the handmaid of justice, freedom is its child, peace is its companion, safety walks in its steps, victory in its train; it is the brightest emanation from the Gospel; it is the attribute of God.—SIDNEY SMITH.

The Lectures.

The Board of Lectureship.

The appointments for the year beginning June 12, 1905, are:—

Miss Mary Brookins, C.S.B., 925 N. Y. Life Building, Minneapolis, Minn.

Hon. Clarence A. Buskirk, C.S., 221 Monroe St., Princeton, Ind.

Clarence C. Eaton, C.S.B., 305-6 Fidelity Building, Tacoma, Wash.

Judge William G. Ewing, C.S.B., 2932 Indiana Avenue, Chicago, Ill.

F. J. Fluno, M.D., C.S.D., 1368 Franklin Street, Oakland, Cal.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada Avenue, Colorado Springs, Col.

Prof. Hermann S. Hering, C.S.B., Hemenway Chambers, Boston, Mass.

Edward A. Kimball, C.S.D., Post Office Box 518, Chicago, Ill.

Bliss Knapp, C.S.B., 4 Batavia Street, Boston, Mass.

Frank H. Leonard, C.S.B., 309 Temple Bar Building, Brooklyn, N. Y.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

William N. Miller, K.C., C.S.B., 6 Summer Terrace, S. Kensington, London, England.

Mrs. Sue Harper Mims, C.S.D., 575 Peachtree Street, Atlanta, Ga.

Dr. Silas J. Sawyer, C.S.D., 497 La Fayette Place, Milwaukee, Wis.

Rev. Arthur R. Vosburgh, C.S.B., 517 Central Building, Rochester, N. Y.

Bicknell Young, C.S.B., 243 Wabash Avenue, Chicago, Ill.

All correspondence regarding lectures should be sent to the lecturers at the addresses here given. The Manual provides that applications should be made to the individual members of the Board of Lectureship. Requests for lectures are therefore misdirected when mailed to the Clerk of The Mother Church, to the Board of Lectureship, or to the Christian Science Publishing Society.

As in former years a circular will be mailed to the clerks of the churches and societies, giving all necessary information regarding lectures.

It might be added that as the field is large, and lecturers are not assigned to any specific locality or district, it is very desirable that members of the Board should have as much time as possible to arrange appointments. When a branch church or society has decided to have a lecture, and determined the lecturer whose service is desired, the clerk should immediately forward the application, and no other engagement should be made before a reply has been received.

During the past year, Rev. Irving C. Tomlinson, C.S.B., found that his duties as First Reader of First Church of Christ, Scientist, Concord, N. H., left him but little time for the work of the Board of Lectureship, therefore he resigned from the Board, and upon his request he was not elected to membership for the ensuing year.

Tallahassee, Fla.

On May 9, Mr. Bicknell Young gave a lecture in the Opera House, at the request of the Christian Scientists of Florida. The lecture was well attended. Much good has been done in this community, and we hear of many whose thoughts have been awakened by the lecture.

Correspondence.

The lecturer was introduced by Mr. Justice Shackelford, of the Florida Supreme Court, who said in part,—

"And Nathaniel said unto him, Can there any good thing come out of Nazareth? Philip saith unto him, Come and see." When asked the question, "Can Christian Science be true?" may I not make the same reply, "Come and see." To those of you who believe in the Christian religion, as I presume most of you do, let me remind you that at one time Christianity was a sect that everywhere was spoken against. To those of you who worship at the shrine of physical science, I would remind you of the fact that, when experiments were being made with steam navigation, a prominent English scientist wrote a book in which he set forth many unanswerable arguments, as he thought, why it would be impossible for it ever to be used in ocean navigation. Alfred Russell Wallace, one of the foremost living scientists, has said that whenever the scientists agree in condemning anything which they have not first carefully investigated, the scientists have invariably been wrong. Might it not be well, then, for us, like Solomon, to ask God for an understanding heart to enable us to discern between good and evil, hoping that the other gifts may be bestowed upon us also? Let us also remember that one greater than Solomon said: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." By this I understand that we must make God's kingdom first with us at all times, in order to receive the promised blessings; therefore, far more is meant than merely believing, or simply joining a church. Do you ask me what is my attitude toward Christian Science? Permit me to say that I am simply an investigator; a seeker of truth, having no theory to uphold, but willing to follow the gleam wherever it may lead, ever desiring more light. If we should find that the promised "signs shall follow them that believe," it would be well for us to believe also, would it not?—*The True Democrat*.

Northampton, Mass.

An audience of between four and five hundred people, a large proportion of whom were from out of town, heard the lecture on Christian Science by Hon. Clarence A. Buskirk, of Indiana, at the Academy of Music, Sunday afternoon [May 14]. Hon. Richard W. Irwin introduced the speaker, and said in part,—

I am not, as you all know, a subscriber to the ritual of Christian Science. I do not say this apologetically, for I deem it an honor to present the speaker of this afternoon. One thing there is, however, which struck me, and that is the application of the word Science; for I understand that there has been no recent divine revelation, but it is the old, old story, founded on the Bible; no new information, as I understand it, but the Science of the spirit of Christ with us, as it has always been. It cannot be possible that this spirit left us when Christ died, but it has lived from then till now. Let us enjoy it; let us practise it here, that we may enjoy it forever hereafter. I am here simply to present one who is, by his training, ability, and experience qualified to speak upon Christian Science. I do not know that he will proclaim to you a new light, but he will show you the light from a new side; not a new way, but a new firmness, a new determination to follow the way the Lord made plain. He will not give you new duties, but show you the importance and wisdom of following the divine leading as prescribed in the Holy Bible.—*Hampshire Gazette*.

Lectures at Other Places.

Granite Falls, Minn.—Judge William G. Ewing, March 9.
Pasadena, Cal.—Edward A. Kimball, April 21.
Winfield, Kan.—William D. McCrackan, April 23.
Springfield, Ill.—Judge Septimus J. Hanna, April 30.
Marion, Ind.—Bicknell Young, April 30.
Champaign, Ill.—Judge Septimus J. Hanna, May 1.
Texarkana, Ark.—Edward A. Kimball, May 1.
Batavia, Ill.—William D. McCrackan, May 1.
Terre Haute, Ind.—Judge Septimus J. Hanna, May 2.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Letter of Thanks.

Pleasant View, Concord, N. H., July 3, 1905.

Mr. Edward F. Dellano, Christian Scientist.

Beloved Student:—You will accept my thanks for your hand-illuminated parchment copy of Christ's Sermon in the Mount. It is indeed joyous to trace both the divine and the human hand in that glorified sermon of our Master glowing with light and love.

You ought to receive ample financial compensation for so beautiful an illustration of that gospel gem now radiant with art and divine Science.

MARY BAKER G. EDDY.

The Bane of Superficiality.

RELIGIOUS history is the chronicle of a series of revelations through isolated leaders who were the sages and prophets of their day. Successive revivals of spiritual life registered a high tide of enthusiastic devotion and achievement, which was followed by a subsidence to the ordinary level of inefficiency, and if one were to look upon these phenomena as the manifestation of a far reaching law of ethical oscillation, he would be logically led to conclude that religious decadence is no less normal than religious ascendency; that it is the necessary antecedent of every more advanced renaissance. If one were asked to name the facts or conditions which deny the legitimacy of this order of events, he could but answer that the only ground of assurance that Christians to-day will not repeat the mistakes of their fathers is found in the fair assumption that, having learned wisdom from the experience of others, they will avoid the beginnings of their error. The possibility that religious progress will be hindered exists in so far as superficiality and pretence exist among the professedly religious, and this possibility can be forestalled only as it is recognized by individual Christians and intelligently met.

A study of the conditions of the early Church as they are presented in the "Acts of the Apostles," and especially in Paul's letters of counsel and rebuke, makes it entirely clear that the beginnings of its relapse into theoretical faith and fruitless formality are not to be traced to external resistance, the opposition of the Roman world, much less to any imperfection or inadequacy in the truth communicated by the great Teacher, but to the feebleness and indifference of the apprehension of that truth, the failure to enter into and maintain vital and nourishing relations with it. There is no more subtle temptation than that which would lead us to indulge a shallow, distorted sense of things, "having a form of godliness," as Paul says, "but denying the power thereof"—being content with semblance instead of substance, pretence instead of Principle, until the religious life, instead of being the continuous manifestation of Truth and Love, becomes in its every detail a tissue of unguineness. To the Church of the Laodiceans it was said by the Spirit, "Because thou art lukewarm, and neither cold nor hot, I will spue thee out of my mouth," and how much more surely will this condemnation fall upon us, to whom the brighter illumination, the yet richer revelation has come,

if we, like them, are content with a superficial and inadequate understanding of spiritual things.

Jesus was ever trying to save his disciples from the bane of this Phariseism. In naming and applying for himself the unfailing test of truth; viz., the healing of sickness and sin, and in teaching the necessity of its continual use, he provided for the detection and avoidance of that most blighting self-deception,—the contentment of superficiality, and had his instruction been followed, the faults and falsities which so soon robbed the Christian church of its spiritual vigor and effectiveness would have been excluded.

In the philosophy of Jesus all is superficial which is unspiritual, the unreal is the false, and the only genuineness is that of absolute loyalty to demonstrable truth. In the light of this teaching Christian Science re-affirms that the authority of councils and creeds, the dictum of prevailing human opinions, and the convictions of the well-meaning, all count for nothing if the proposition is not practically verifiable by its ability to heal and to save. Says John, "Every spirit that confesseth not that Jesus Christ is come in the flesh is not of God." That which does not dispel darkness is not light, and every asserted statement of truth which does not advance and establish the sovereignty of the Christ-idea over human conditions is not true.

It has been well said recently by a Congregational minister that our "religion must stand the test of the practical. It is not enough that we talk about the Golden Rule, we must practise and live the Golden Rule. The people of Jerusalem did not have to guess whether or not the early believers were followers of the Master, they took knowledge of them that they had been with Jesus."

Never was the world more impatient with cant and unctuous pretence than it is to-day, and the motto, "To be, rather than to seem," may well be inscribed upon the phylactery of every one who names the name of Christ.

Christian Science stands for the test of genuineness which the Master imposed, and to be a Christian Scientist is to live in conformity therewith. This alone will save us from superficiality and its sequent sorrows, because it alone will test the correctness of our understanding, the genuineness of our faith, the purity of our love.

JOHN B. WILLIS.

Blessings and Responsibilities.

ANOTHER Communion season in the branch churches of our denomination is over, and many have doubtless been inspired by its lessons to bring forth "more fruit," even as the Master required of all his followers. On these occasions new members are received into our churches, and when questioned concerning their motives in seeking admission to the fold, the larger number are wont to name a desire for greater understanding; for added blessings. While it is indeed praiseworthy to desire these blessings, it is well to remember that the greater blessedness is to be found in giving rather than in receiving. Those who attend our services are privileged to receive all that they are ready to appropriate without being asked to make any return. At our Reading Rooms our literature is free for the use of inquirers, and lectures are given at least once a year by each branch church, while all are privileged to attend the Sunday services and Wednesday meetings, at both of which many are healed of their mental and physical discords.

In becoming members of the church, however, a new sense is unfolded, the erstwhile recipient should become in his turn a giver of blessings to others; he assumes new responsibilities, which tend to develop new capabilities for being and for doing good. It were, therefore, well for each, whether his membership be new or old, to ponder daily and deeply the solemn obligation embodied in the last of our Church tenets, always read on Communion Sundays, and found in our text-book (p. 497), that we may measure ourselves by this high demand. Too often the suggestion

comes, to judge thoughtlessly a brother's conduct, and ask, as did Peter, "What shall this man do?" In such an event it is well to remember the Master's significant reply, "What is that to thee? follow thou me." If meekness, mercy, justice, and purity are to characterize all our lives, this cannot be attained without the watchfulness and prayer which we have solemnly covenanted to observe. We have voluntarily undertaken to follow Christ, Truth, and it rests with us to prove to the world that this, with all it implies, is possible to-day.

If one were to ask, Have I then, nothing to do with my brother's failings? the answer would be, Yes, much! Should he fail to uphold the standard which all alike profess, it rests with you to be more alive to the demands of Truth, more responsive to every requirement of Principle, so that our beloved Cause may not suffer, though he be unworthy.

By high and noble living you will prove to the world that Christian Science is the Christianity of Christ Jesus, and if your justice and your purity are accompanied by meekness the erring brother will be perpetually reminded of the good he is missing and will the more surely come to see the folly and the wrong of his course. Thus should we "consider one another to provoke unto love and good works."

Every failure of which we are conscious, or cognizant, points to the divine standard,—perfection,—and whispers the possibility of its attainment; else why judge? The purpose of our Church is to aid all who strive for this perfection, a perfection which includes physical as well as spiritual health and harmony, and we learn how to attain it from the Bible and our text-book, which continually point us to the example of Christ Jesus. He said of his Church, "The gates of hell shall not prevail against it." It cannot fail, and shall any of its members falter or fall when they know what it means to be built upon the rock,—Truth? The rather shall not the whole-hearted service of each hasten the fulfilment of the poet's prayer,—

O living Church, thine errand speed;
Fulfil thy task sublime;
With bread of life earth's hunger feed;
Redeem the evil time.

ANNIE M. KNOTT.

Letters to our Leader.

[Telegram.]

New York, July 8.

Rev. Mary Baker Eddy, Pleasant View, Concord, N. H.

Your public acknowledgment of our expression of loyal, loving guidance inspires us with fresh courage to labor, watch, and wait with you for the fulfilling of the law of Love.

AUGUSTA E. STETSON, and Practitioners in Reading Room
of First Church of Christ, Scientist, New York City.

Jacksonville, Fla., June 25, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved and Revered Leader:—I have longed for months to write you, and have refrained from doing so, knowing as I do that your moments are so full of work in your selfless service to mankind, that you have, perhaps, little time in which to read the hundreds of letters that go to you. Yet I feel that it might interest and please you to have a brief account of the progress of our Cause in this far away land of flowers,—Florida.

June 2, 1905, marked the close of another biennial session of the legislature, and we are glad to record another victory over an effort to enact a law inimical to Christian Science and its practice, notwithstanding the fact that the medical fraternity, through the State Medical Association, had well-laid plains to carry through such legislation. The Scientists of this State worked prayerfully and in unity against

the enactment of this law, which was designed to rob us of the right to worship God according to the dictates of our conscience. This is the third time such an attempt has been made and failed, and for this manifestation of God's guiding hand and protecting arm, we again have cause for gratitude. During this session of the legislature Mr. Bicknell Young delivered an able lecture, which was published in full in one of the local papers. This is the first lecture on Christian Science ever delivered in our State capital, and it was given under the auspices of the Christian Scientists of the State.

There is a marked increase in the demand for Christian Science literature, and a deeper interest in our Cause is manifested throughout the State. Five lectures were delivered during the past spring, being the largest number ever given before in this State in a single year.

At a called meeting of our church, First Church of Christ, Scientist, Jacksonville, Florida, June 4, 1905, for the purpose of considering the best means of aiding the building of the new auditorium of The Mother Church, after a free and loving discussion it was unanimously decided to increase our contributions for this purpose, to discontinue the contributions to the building fund of our branch church, and instead thereof to send monthly all our contributions for building purposes to the Building Fund of The Mother Church. Subscriptions were called for, and a sum of more than sixty dollars per month was subscribed, to be sent to The Mother Church monthly until our new "Prayer in Stone" is completed. Three fourths of our first subscription to the Building Fund of the new auditorium has already been sent in. It was also unanimously voted by the donors to send the amount on hand in the building fund of our branch church to the Building Fund of The Mother Church. The loving expressions of loyalty to our Leader, and to The Mother Church, and the desire to daily work and pray for the early completion of the new auditorium, were inspiring.

Our church is awakened along this line as never before. Our Master's saying, John 15 : 5, seems to have a special significance for us at this hour: "I am the vine, ye are the branches: He that abideth in me, and I in him, the same bringeth forth much fruit: for without me ye can do nothing." The redemptive work of Christian Science is being manifested in our midst, and its healing and reformatory effect is becoming more pronounced. A gentleman who attended our Wednesday evening meeting recently for the first time, went away healed of a severe cough. Christian Science has brought to our consciousness peace, joy, and health, and the heart humbly acknowledges its gratitude to God and His Messenger for all these blessings. And how shall we balance this account with God? The answer to this question we believe is set forth in His inspired Word given to us in the Bible and our text-book, "Science and Health with Key to the Scriptures." May we strive to emulate your example, and to adhere strictly to the teachings of Christian Science.

The sense of my obligation to you and the responsibility I have assumed in becoming a member of The Mother Church, deepens as my vision becomes clearer. The tremendous import of Christian Science and the magnitude of the mission of its Messenger and Prophet, is becoming clearer as consciousness is being purified. The heart's real desire to righteously aid in this movement is most beautifully expressed in the last verse of your poem, "Christ my Refuge."

Lovingly and gratefully yours,

JOHN H. WILLIAMS.

Parsons, Kan., April 19, 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Most Esteemed Leader:—Out here in this little western town in Kansas, many hearts are beating warmly for you.

The desire to see you, grows upon me; but only to say, Thank you, dear friend of humanity. This I may say on paper, and very earnestly, gratefully, honestly do I thank you for teaching me the value of true humility. Only when at Christ's feet, do I see the wonderful breadth of your work in the world. Many wonderful demonstrations have made my dear ones see, if they do not acknowledge, what you have done, and shown others how to do. Gallstones have been removed by reading Science and Health, also malarial fever, with temperature at one hundred and five for five days,—these and other serious ills have been overcome by Christian Science. More than this, you have taught me to know when error misleads, and to say in all humility, "Here I stand. I can do no otherwise!"

Actions do speak, and I thank you again for the simplicity of your life and your daily courage.

Most sincerely,
MRS. LILLIE V. BOARDMAN.

Boston, Mass., March 3, 1905.

My Dear Mrs. Eddy:—When I first read the preface of your book, Science and Health, I asked the lady whose copy I was then reading, if you were still on earth, and she told me you were. I then expressed a desire to see you. In February, 1900, I first took up the study of this wondrous book, and I came to Boston in June, in good season for the Communion. I was very disappointed that I did not see you. However, I have had the blessing of seeing you three times since.

My errors were dissipation in its vilest forms of sin. My wife and I were separated for three years, so far as we knew never to unite again, but for the past fourteen months we have been together. With the help of a faithful Scientist I have been lifted out of the gulf of sin into perfect harmony and love. I have never known before what a true sense of love really is. Now my heart overflows with sincere thankfulness to you, for your loving sacrifice for such as I. I know that love for us all ever abides with you.

Gratefully yours,
JOHN W. HENDRICKS.

Concord, N. H., July 6, 1905.

Reverend Mary Baker G. Eddy.

Dear Beloved Leader:—I would like to tell you of my wonderful healing, by just reading a few chapters in your dear book, Science and Health, nearly four years ago. I thank you, oh, so much, for all you have done for my husband and myself, which has enabled us to help others. I have had several cases of instantaneous healing recently, and in the two weeks we have been in Concord I have received letters from three sufferers who have been healed. The healing of others is more to me than my own healing. My gratitude to you is beyond expression, and I am trying to live the life that will express it more than words.

With love, ever yours for Truth,
MRS. SARAH J. H. LYON.

A New Pamphlet.

CHRISTIAN SCIENCE: ITS COMPASSIONATE APPEAL.

This pamphlet, which has just been issued, contains four articles reprinted from *The Christian Science Journal*: "Christian Science: its Compassionate Appeal," April, 1905; "Israel's Return to Zion," February, 1905, "Letter to a Jewess," March, 1900, and "Letter to a Friend in England," May, 1902.

Prices: Single copies, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, \$1.15; fifty copies to one address, \$2.25. Order from THE CHRISTIAN SCIENCE PUBLISHING SOCIETY, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

My heart is full of praise to God for His wonderful goodness. I did not come to Christian Science for physical healing, but some six years ago I was led by the blessing of God to substitute as organist in Second Church of Christ, Scientist, New York City, for one month. There I soon saw that Christian Science is the truth, and just what I had been looking for; and in these six years it has been the only physician in our family,—my wife, three children, and myself. Although I never doubted the correctness of the wonderful testimonies which I heard, and others which I read in our periodicals, yet, not having any severe ailments to demonstrate over, I did not experience the wonderful healing power of Truth until the 28th of July last. I attempted to take a flash-light photograph, when the flash, which was a large one, went off unexpectedly in my face. We were in the country, fifty-five miles from New York, and two miles from the telephone. My eyebrows, eyelashes, and moustache were badly singed, and the skin burned off part of my face. I immediately went upstairs, trying to declare the truth, and knowing as I did the power of Christ, Truth, I was not frightened. My wife reached the village with considerable difficulty, and telephoned to New York, getting the help of a practitioner there, who immediately took my case. I did not seem to be conscious of any pain in my face after a few minutes, but my eyes were like balls of fire, and when I tried to pull up the upper lid, I could see nothing. This accident occurred about 5.30 P.M., and at 10.30 I was free from all sense of pain. I slept that night, except waking up now and then from the irritation caused by the burned eyelashes pressing against the swollen lids. The second day I was out in the yard, and could see a little. I never put anything on my face, so a thick covering formed all over it, which was in some places an eighth of an inch in thickness, and very tough. By the next Wednesday, it had nearly all come off; my eyes were wide open and my sight seemed better than before. In one week I was out rowing, and the following Sabbath evening I played in a church four miles away.

For all the help received in Christian Science I am most deeply and humbly grateful to our beloved and revered Leader, Mrs. Eddy, who has made it possible for us to gain the understanding, be it ever so slight, by which we can lay hold of the wonderful power of our Father-Mother God. I am very grateful for the *Sentinel, Journal*, and, last but not least, for those wonderful Lesson-Sermons.

EDWARD EVERETT HAND, Brooklyn, N. Y.

[Translation.]

My son was a sufferer from his seventh to his twelfth year from a disease of the throat. His tonsils were much swollen and covered with a filmy rash. He had a high fever and dysphagia. This condition lasted for eight days. He was backward in his development, and through this constant ailment was of a discontented disposition. A year ago the disease appeared frequently, in spite of the greatest care, hardly four weeks passing until the same trouble made its appearance again. Medical treatment brought no help, and I left nothing untried in those five years. I again took my son to a physician and had him examined. The physician said that his tonsils must be removed, they were too large, and for that reason were often inflamed, that nothing else would cure the disease. In March, 1904, my son was ill again. Meanwhile we had heard of Christian Science, and during this illness the boy was reading in *Der Herold der Christian Science*, and would not take the medicine which he had formerly used. He wanted to be healed by the help of God, and he was entirely well after two treatments. Over a year has passed, and the disease has not reappeared, and we know it will not return. The

discontented boy has been transformed to a cheerful, loving one.

My husband and I are deeply grateful to God for Christian Science. The words, "Casting all your care upon him; for he careth for you," are ever true. We are also grateful to our Leader, Mrs. Eddy. We have found happiness and contentment in our daily life.

FRAU B. LEHMANN, Charlottenburg, Germany.

It is now over five years since I heard of Christian Science through a neighbor, who loaned me Science and Health, but I could then read very little English, as I am German. My friend told me of the truth contained in this book, and I would read and study it whenever I had time. I attended the Wednesday meetings and Sunday services; learned to read understandingly, and to prove for myself the truth taught in Science and Health. It has brought peace, rest, and harmony in our home. For the spiritual uplifting I am very grateful. It helped me to overcome sorrow and trouble. I did not come into Science for physical health, but my husband had been a great sufferer from bowel trouble, catarrh, and dyspepsia for over twelve years. Neither physicians nor all the material remedies he used could give him relief from pain and distress. As soon as he heard that people were healed by Christian Science, he went to a practitioner, who gave him treatment, and he was soon healed of all the sickness. We are very thankful for this truth that liberates from the bondage of the material senses.

Through change of business we came to live here, in a lonely little town in the State of Oregon. We are the only Christian Scientists here. We have met with much opposition concerning this teaching, and have had many struggles to overcome, but divine Love has given us strength and understanding in times of trouble. I am most grateful for the periodicals, which have been my constant companions, for without them I would have been very lonely. The study of the Sunday Lessons has been a great help,—through them I have had some good demonstrations over sickness.

Words cannot express my gratitude and love to God, and to our beloved Leader, Mrs. Eddy, for all the blessings we have received through her teachings. I am working and striving to live the life of a true Christian Scientist.

MRS. MINNA SCHNELL, Goshen, Ore.

When I was six years old, an affliction came upon me which the physicians said had been caused by a diseased cow's milk. It involved indigestion, extreme constipation, and convulsions which brought unconsciousness. I suffered much and was a great care to my parents till I was eleven years old, when the doctor said I had outgrown my trouble. When I was nineteen years of age a terrible attack of rheumatism kept me on my back for thirteen weeks. When I recovered I found myself susceptible to inflamed joints at the slightest provocation, and always through the winter I suffered from swollen feet, which made walking painful. There was also a weakness of the system, not noticeable outwardly, but apparently very real to me, which made me afraid of certain kinds of food and all kinds of damp weather. Two years later I suffered another twelve weeks' siege of the rheumatism, and this left me with nervous indigestion, which defied all the efforts of several good physicians. The rheumatism I expected to have—under such control as care respecting food and exposure could provide—so long as I lived, for my grandfather had it before me, but I tried every conceivable thing within reach for the nervous indigestion. A superabundance of optimism and nerve, so-called, kept my head above water, but when alone in my room at night my suffering brought the average of misery pretty well up. Many a time have I gone to sleep in utter exhaustion, only to arise in the morning and begin again the same horrid round. Every meal

distressed me. Acidity of such a character that it seemed to be burning a hole through my flesh, would induce a degree of nervousness that in turn increased the acidity. I had charge of an important editorial desk in the offices of a big news association. The work was confining and exacting; it required sharp supervision, quick judgment, and considerable labor, and to me it was a constant strain at high tension. In July, 1901, I collapsed. Pulling myself together, I started for Vermont to recuperate. *En route* I stopped to see my parents in Saratoga Springs. My mother, who had been a sufferer for eighteen years from blood-poisoning, which the doctors said had been caused by impure virus used in vaccination, and which they were unable to cure, was becoming interested in Christian Science, and she told me something about it.

After six weeks in the mountains I returned to Jersey City feeling quite myself again, but a few weeks at my desk found the old troubles getting in their work once more. The management did not want on their staff a man liable to keel over at any minute, so I was invited to get an outdoor position, which I did. The nervousness was somewhat subdued by the change, but the rheumatism and the indigestion continued to remind me of their existence. The attacks of indigestion again came to be of a violent nature, involving dizziness and an awful feeling of disintegration, as though the particles of my flesh were separating in space. To those who have never suffered from indigestion in its worst form, it is impossible to give any adequate idea of the physical and mental suffering involved. Suffice it to say, only the optimism and "nerve" heretofore referred to kept me from being a miserable wreck. I tried both schools of medicine, I tried abstinence from medicine, I tried hot water, cold water, physical exercises. Nothing ever had more than a brief effect.

The next spring I visited my parents again. In place of a wasted form and sallow, sunken features, I beheld a mother with bright eyes, pink-tinted cheeks, and a smile of sweet assurance that were dear to see. I returned to Jersey City, bought a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and started to read it. I had proceeded about forty pages, when one Saturday evening I became conscious of a strange upheaval. It followed the lines of an attack of acute indigestion, but the confusion and misery which accompanied it were more poignant than ever before. Eventually, unable to bear it longer, I went to my room and threw myself on the bed for an hour of torment. That hour suggests the picture of a lost soul struggling frantically with a fire-and-brimstone hell. My optimism and my nerve were gone. I broke down, and with my head buried in the pillow to stifle the sound, I cried like a baby. My wife found me there a little later, and I retired for the night.

Reader, have you ever awakened from a horrible nightmare and experienced the exhilarating joy of the realization of freedom from it all? Then you know how I felt the next morning, when I opened my eyes on a new world. Let no one say that some strange enthusiasm or undue exaltation accounted for the peace and harmony of that day. I was healed. Through the understanding of God, good, unconsciously, yet no less surely, gained in the reading of the truth expressed in those few pages of Science and Health, I had touched the hem of His garment. Through the next day it continued, through the next week, through the next month, while I read the little volume with avidity and increased comprehension; and by applying the knowledge gained I overcame countless little ailments, worries, and perplexities with the ease of those who tread the foot-hills of Science.

Two or three months later I began to realize that my condition was not satisfactory. Indigestion and constipation were attacking me again and showing considerable vigor, and other discords began stirring into activity. Puzlement that was almost consternation followed, but I had

advanced sufficiently to understand the situation to some degree. The foot-hills were no longer an eminence. The summit that stretched above me dwarfed them to pigmy proportions. Turning my eyes from the false prospect below I realized my place on those towering slopes and started slowly upward. Like great boulders in my pathway I encountered impatience, fear, resentment, anger, pride, selfishness, and many other errors, and learned this: That God is harmonious; that man, the image of God, must of necessity be harmonious; that man does not show himself in his true colors unless he is harmonious, and that he cannot be harmonious while he submits to the presence in his consciousness of discordant elements. In other words, I learned that in just the proportion and degree that I succeeded in removing these obstacles of fear, selfishness, *et al.* from my consciousness, in just that degree disappeared the indigestion, the constipation, the rheumatism that manifested them.

The mental clarification and the spiritual uplifting that have followed have been most illuminating, and my gratitude to the noble woman whose purity, understanding, and unselfish toil have given to the world a practical, working rule for the attainment of the ends preached and demonstrated by Jesus of Nazareth, is very great. I have learned that Christian Science is Christian, because it follows literally the teachings of Christ Jesus. I have learned that it is scientific, because it is demonstrable along definite and fixed lines, and I apply it every day in my family and in my business.—FORREST A. HEATH, Jersey City, N. J.

[Translation.]

I wish to express my gratitude for Christian Science. During the last two years we seemed to be pursued by misfortune; not disease, but lack of employment. All my husband's endeavors to find another position were in vain. Through this falling off in our income, we had used all our money formerly laid by and had even sold some dispensable household articles, because of the needs of a family of five. Days, weeks, and months passed, and my husband found no work. We were in great misery; the daily returning battle with want had not only exhausted my husband's strength but I too was all worn out. We decided to end all our lives,—a dreadful deed,—but we thought it excusable because despair had taken control of us and we felt entirely forsaken. We did not then see that almighty God gives bread to every one, and that we had allowed error to control us,—which prevented us from having the right faith. We were, however, led to a lady who encouraged and helped us for the present. This gave us a fresh hold, and my husband soon found work which kept us temporarily above water. After some time he found a position with a firm where he had many times before inquired in vain. The lady who had held the thought of truth for us, now told us something of Christian Science, and we endeavored to live in accordance with its teachings. In case of sickness we have always received help. I have lost my headache, which was of many years' standing.

On one occasion, however, my husband wavered. After he had been in a position for four months he was dismissed. At first he did not tell me of it, but ran around seeking work. At last he went to our friend. She advised him what to do and reminded him to be sure and hold to the truth. This was on Saturday, and Monday morning he had his old position back again. His employer is much more friendly than formerly and better satisfied with his work. We have a larger home, and I earn some extra money.

We are very grateful for all the good and the love which we have received through Christian Science, and very grateful to our noble Leader, Mrs. Eddy, who has revealed this truth.—FRAU HELENE RIES, Dresden, Germany.

My coming into Christian Science was a normal growth from the material sense of God and the universe, into the spiritual sense.

I was a member of an orthodox church for years, but with advanced study of the Scriptures and with general observation, my experience became the same as that of many others who have endeavored to love and serve God but could not reconcile their conception of His justice with the generally accepted belief about Him. I attended other churches; and spent several years in a listless, almost aimless way, looking for something, I knew not what. After varied experiences Christian Science came under my observation. For some time I regarded in a passive way what I saw and heard of this Science; but at last I determined to know something definite of it, and I remember so well the great hope that sprang up in me when I started to read the text-book. I had seen and heard enough to give me the hope that in Christian Science I might find that for which my heart was longing.

And I found it. I found satisfaction, I found peace.—yea, I found God. The healing power of Christian Science has been manifested in the destruction of discontent and sorrow. I have also been healed of physical disorders, such as chronic constipation, frequent pain in the side, colds; also malarial fever, from which I suffered almost yearly ever since a child. This disease was believed to be due to heredity, and as I grew older it was more severe, confining me to my bed for many days. It is now four years since I began the study of Christian Science and this disease has entirely disappeared. In my immediate family the efficacy of Christian Science to remove discord of every kind—sin, sickness, financial troubles, all evil—is daily being demonstrated, and we are learning that God is able and willing to keep us from all evil.

My thanksgiving to God, my gratitude to Mrs. Eddy, and to our Church, can be expressed in no other way so well as in the daily living of the truth revealed to us in Christian Science.—MRS. CLARA M. SCHMITT, Oskaloosa, Ia.

It is with deep gratitude to God and to Christian Science that I testify to my release from the tobacco and liquor habits, hoping this will help others who are in a similar position. I am a traveling salesman, and had been led to believe that it was necessary to drink and smoke freely in order to get business and gain popularity with my trade. I contracted these habits about twelve years ago, when I was seventeen years of age, and frequently carried the drinking to excess. About four years ago I became interested in Christian Science through the healing of my two children of cerebro-spinal meningitis. I took class instruction at once, and during this instruction I was enabled to lay aside my glasses, which I had worn about five years; but it did not awaken me to the necessity of doing Christian Science work for myself or others, consequently I made little or no progress toward the light of understanding. It seemed so much easier to get help from others.

About two years ago I became disgusted with my way of living and decided that I would be happier if I could give up drinking and smoking. I soon found that I could not give them up without help, so I went to a practitioner, and after one or two treatments I lost all taste for either tobacco or liquor.

Two or three months passed without my feeling the slightest desire for a drink or a smoke. I then went on one of my regular business trips of about eight weeks' duration, and the old sense that it was necessary to drink and smoke with my customers, and the fear of unpopularity caused me to take up my old habits again. It was hard at first to take them up, because they had become very distasteful, but I kept at it and they soon had a stronger hold on me than ever before. This put me in a dreadful state of unrest, from which I could get no relief. I would not turn again to Christian Science, because I could not see how I could reconcile it with my business. This condition existed until last spring, when through the loving-kindness of a Christian Scientist I was invited to a reception. I accepted the

invitation and found myself among about three hundred practical business men, many of whom are recognized throughout the commercial world as successful men. I heard these men speak of Christian Science in connection with their business, heard them tell of their being healed of drinking and smoking. I heard these men, whose time was far more occupied with business affairs than was mine, telling how and when they found the time to heal the sick and the sinful. This was a great object-lesson to me, it filled me with a desire to do God's work. It made me long to get away from the old sense of things and to help others.

I left the reception filled with gratitude for the truth that had shown me the way that night. Through force of habit I lit a cigarette as soon as I reached the street. It did not taste right, and thinking it might be the fault of the cigarette I threw it away and lighted another which was no better. I then realized that the truth had done its work. Error tempted me to take a drink, but I could not bring myself to enter a saloon. I was very glad to be freed from the desire to drink, but I was not sure that I liked the idea of giving up my pipe and cigarettes, because I had always believed them to be a source of consolation. I therefore tried cigars, cigarettes, and my pipe several times the next few days, but was unable to smoke any of them. The sense of loss then left me, and in the eight months that have elapsed since then I have been absolutely free from all desire to drink or smoke. When I went on my business trip last fall I did not experience the slightest temptation to drink or smoke. My business dealings with my customers were more harmonious and the results more satisfactory.

THOMAS G. BOLLES, East Orange, N. J.

Christian Science has healed me of a gouty affection of the joints, neuralgia, liver complaint, and facial paralysis. Such, at least, was the diagnosis of the physician who was called to attend me, when I was stricken suddenly, some years ago. After taking his medicines for a few days I resolved to depend entirely on Christian Science, of which I knew a little. I read *Science and Health*, attended Sunday services, and had a few treatments. To-day there is no trace of paralysis remaining, although the doctor said, when informed of my determination to trust Christian Science, "Why, look at her face, the right side is dead now." I had heard of Christian Science long before, but inherited denominational pride kept me from seeking to know all I might have learned of it. It was not until driven by suffering that I discovered the great and noble work which this truth is doing. Then I broke away from the religious sect in which I had been brought up, and rejoiced in seeking an understanding of the whole of the Master's teachings, as illumined by *Science and Health*. The *Christian Science Journal* opened up to me the mighty work done by that unselfish and God-inspired woman, Mrs. Eddy, and year by year my love and gratitude to her, to whom I owe so much, increases.

I am thankful that I can read with greater understanding the text-book, "*Science and Health with Key to the Scriptures*," which is bringing thousands to health and happiness.

L. L. WIGHT, Brooklyn, N. Y.

No one could have greater cause for gratitude to God, for Christian Science, than myself. I could not begin to express in words what I owe, hence I am trying to follow its behests in deeds. I sought Christian Science for physical help, but in the second conversation with the friend who started me in the straight and narrow path, I caught the thought that there was vastly more to be found than mere physical healing, and then and there the light of hope was born in my consciousness and has never left me, though I have been through many trials. The conviction that the truth about God and man is not only knowable but also at hand, has always strengthened my courage until I could

again behold the light. I cannot imagine a more darkened thought in regard to the promises of the Scriptures than was mine. I often repeated Jesus' words, "Seek, and ye shall find," but how, and where, should I seek? and what should I find? Receiving no answer to these and other questions regarding God and life, I became dissatisfied and restless; but I have had many of the promises fulfilled through the study of "*Science and Health with Key to the Scriptures*" by Mrs. Eddy. There is no possession on earth that I prize so highly as our text-book.

After persevering three years in the study of this blessed volume, I was healed of deafness, for which I am very grateful, but still more for the overcoming of temper, resentment, love of the world, etc. It has also been my privilege (and no greater one exists) to be the avenue through which others have been healed and led to the truth. I am in awe before the wonderful work that our Leader has done, and is doing for mankind.

LILLIE FRY FISCHER, Cincinnati, O.

Two years ago, when suffering with so-called incurable disease which had baffled the skill of many physicians, I had given up in despair, convinced that drugs could not heal me. I then cried to God and the promise was verified, "While they are yet speaking, I will hear." A dear neighbor, who was a Christian Scientist, said to me, "You need not suffer so; God is able to heal you." I did not see how; and asked many questions. She gave me some copies of the *Sentinel* and *Journal* to read, and later, loaned me *Science and Health* by Mrs. Eddy. As I studied this book, with the Bible, my questions were answered, doubts and fears fled away; what had seemed to hold me in bondage for so long was gone, and I was free. I was healed of heart disease and asthma after twenty years of suffering. Can I help rejoicing? Words fail me when I attempt to tell of the many errors that have been overcome through an understanding of the truth, as revealed to us by our Leader in her book, *Science and Health*. My heart overflows with thankfulness to her for what she has done and is doing for humanity. I have had the privilege of becoming a member of The Mother Church, and my daily prayer is that I may be worthy of the name I bear,—a Christian Scientist. Only those who have made the promises of the 91st Psalm theirs by living its demands continually, can know of the peace that passeth understanding.—MRS. SARAH E. MUNSON, Shelton, Conn.

About four and a half years ago, after having been confined to my bed for a week with diphtheritic sore throat, and having received no relief from the treatment given by our family physician, I made my own demonstration by applying the grain of truth which I had gleaned from a friend. This friend was at the time taking Christian Science treatment for physical troubles of long years' standing, and being wonderfully benefited thereby, had tried to give me a glimpse of the truth as she was receiving it. Two days after I had put aside all my medicines I was back in the musical school, had resumed my duties, and no trace of the disease was left. Since then I have had no further attacks of throat trouble, which formerly were of frequent occurrence. I now find that I always have my help close at hand, and my desire is to work along patiently and meekly, doing my best always. I am truly grateful to our revered Leader, through whom the great light of Truth has come once more.

MRS. AMANDA HAAS, Chicago, Ill.

A work begun in the name of God, and carried on in the name of God, will be brought to a glorious triumph in the name of God! God never starts us in any work which He will not help us to bring to a blessed consummation. The eyes of the Lord will yet behold the final triumph of the Christ. The headstone will one day receive its place of honor!—ANON.

From our Exchanges.

How may the Church be kept free from complicity in known evils, so that it will stand indeed as an unbiased witness for truth, as a disinterested helper of mankind? I say it is not an easy thing, and yet it is a question which always must trouble us and for which we must seek some answer. The answer cannot be found in a return to the separatism of the Pharisee or even of the Puritan, and yet we must make clear where the Church stands on the moral issues of the day. We must make it plain that it stands for honesty, that it stands for justice, that it has sympathy for the men who are striving for a livelihood. Whatever its answer to one specific question may be, it is not in any way determined by worldly gain,—in other words, that it cannot be bought. One thing is perfectly clear to me, and it is that, if the higher life of our country is to be preserved, we must get rid of many of the things which seem to us to be necessary.

The Church always needs money, but just at the present time it needs something else infinitely more. It needs to demonstrate beyond the shadow of a doubt that the desire for more money does not in the slightest degree influence the broad lines of its policy. It is moral independence which is being threatened in America. To him who would live an ideal life the first necessity is to so arrange his manner of life and his ambitions as to achieve the maximum of freedom. The idealist is one who cares supremely for things that have no money value.

REV. SAMUEL M. CROTHERS, D.D.
The Christian Register.

So then the book of Revelation was written primarily for the churches of the seer's own day, and not to gratify our curiosity by giving us a chart of the history of the twentieth century. As every prophet, John served first his own generation. But we are far from saying that his forecast of the future has been entirely fulfilled. The eternal truths declared in the book have innumerable applications to present facts, and shall have so long as the struggle between evil and good continues. Says Bengel, "Without tears it was not written; without tears it cannot be understood." But whenever the Church has suffered, whenever persecution has arisen, whenever the hopeful almost lose hope, then the Apocalypse has been found to have a direct message of inspiration and cheer. Those who have been kept faithful unto death through the assured hope of coming victory, have read the riddle of the book. It is an unveiling of Christ in this world as a present help—the Christ who was, and is, and is to come. "Even so, come, Lord Jesus!"

The Pacific Baptist.

As the Rev. R. J. Campbell, the well-known minister of the City Temple in London, has said in a recent sermon, "The supreme spiritual need of the hour is a strenuous morality." True; it needs proclaiming from the housetops; only let there be no mistake as to what strenuous morality is. The first duty of a true morality is not obedience to a recognized standard; it is the duty of hastening the evolution—to borrow Herbert Spencer's phrase; the duty of ever pursuing after that ideal set forth by Jesus—"Be ye therefore perfect, even as your Father which is in heaven is perfect."—*The Outlook.*

We want personal and public morality, but morality is a product. There is much of it in the world to-day, because the Christian Church has been turning it out through the lives of believers; there is not enough of it in the world to-day, because the Church has not been working full time at its own business. When it is seen that the best things of life have their origin in the Christian Church, wise men will see that the Church is vital to the world's welfare, and will foster instead of flout it.—*The Universalist Leader.*

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

The report of Joseph L. Bristow, who was appointed a special commissioner to investigate trade conditions and other matters affecting the Panama Railroad & Steamship Company, has been made public. It recommends the continuance of the railroad as a commercial line, with improved facilities for handling commerce, including double-tracking and re-equipping the line with modern rolling-stock; the enlargement of its port facilities, the retention of the steamship line between New York and Colon, the cancellation of the contracts with the Pacific Mail Steamship Company and the South American lines, and the opening of the ports of Colon and Panama to all steamship lines on equal terms, and in certain contingencies the establishment by the railroad of steamship lines between Colon and gulf ports, and Panama and important United States Pacific coast ports.

The \$1,000,000 endowment fund for the maintenance of the American Academy of Fine Arts in Rome has been practically completed by the recent subscription of \$100,000 by H. C. Frick. It is proposed to raise \$200,000 more for a library for the institution. The subscribers, besides Mr. Frick, are J. Pierpont Morgan and Henry Walters, trustees, \$100,000 each; William K. Vanderbilt, \$100,000; Harvard University, through Henry L. Higginson, of Boston, \$100,000; James Sillman, \$100,000, and Columbia University, Yale University, the University of Chicago, and the University of California, \$100,000 each.

Instructions were issued last week by the President for a complete and thorough investigation into the Department of Agriculture in order to find the parties responsible for the "leak" in the cotton statistics, by which illegal and advance information certain brokers in the cotton market were able to make large profits. The Secretary of the Department is also making a thorough investigation. Some dismissals have already been made.

The Roosevelt, a vessel specially built

for the Peary expedition to the North Pole, which has been in preparation since October, 1904, and has cost for building, equipment, and maintenance \$150,000, sailed from New York harbor on Sunday, July 16, amid screaming whistles of passing craft and shore salutes. She will proceed to Sidney, C. B., where Lieutenant Peary will meet her, and where she will exchange her present crew for her picked crew.

A contribution to the United States Treasury conscience fund, received at Washington, carries the total amount beyond the \$400,000 mark. The conscience fund was established in 1811.

Foreign.

Emperor Nicholas has signed the appointment of M. Witte, president of the Committee of Ministers, to be chief plenipotentiary representing the Russian Government in the approaching peace negotiations. In place of M. Muravieff, resigned. He is and has been a strong peace man, and his appointment is taken as a practical assurance of peace. It is thought M. Muravieff withdrew because of his lack of diplomatic training and want of acquaintance with the questions involved.

Passage has already been engaged on the steamer Kaiser Wilhelm Der Grosse, sailing from Cherbourg July 26, for the following list of Russian plenipotentiaries and their party: M. Witte, chief plenipotentiary; Professor De Martens, professor of international law at the University of St. Petersburg; M. Shipoff, director of the Treasury Department; Major General Yermoleff, military attache at London; M. Samoiloff of the Russian Foreign Office; M. Plancon, formerly Russian Charge d'Affaires at Peking; M. Korotovitz, formerly Secretary of the Russian Legation at Peking; M. Naboukoff of the Foreign Office.

The steamer Minnesota of the Great Northern line, having on board the Japanese peace plenipotentiaries, sailed from Yokohama for Seattle on the 8th. An enormous crowd of Japanese and foreigners, with bands of music, assembled at the water front and general enthusiasm was manifested, the bands playing patriotic airs and the crowd discharging fireworks. The ship sailed amidst a storm of "Banzais." The Japanese guardship Takao fired a salute of nineteen guns as the Minnesota put to sea, escorted by a torpedo boat and a naval steamer specially detailed to convoy her out of Tokio Bay.

Season tickets available during a fortnight, and allowing the holder to travel all over Belgium as often as he likes and in any direction he may choose, including, moreover, a passage each way between Dover and Ostend, are issued at the following rates: First class, \$15.75; second class, \$11. The ticket covers twenty-five hundred miles.

Industrial and Commercial.

The placing on the market of six million acres of land owned by the State of Texas, which will be done the first of next September, will cause the breaking up of many large cattle ranches in western Texas, where the land that is to be sold is situated. It was not until late years that that portion of the State was thought to be adapted to farming. The agricultural element kept going farther and farther west year by year, until they began encroaching upon the grazing lands leased by the State. The demand for additional land for homes increasing, the State resolved to abandon its policy of leasing, and to give the people an opportunity to obtain them at small cost. The area of the land which the State is to sell is some ninety-four hundred square miles. This land is to be sold in lots of one to eight sections each. No purchaser will be permitted to acquire more than eight sections. It will provide homes for about five thousand families.

At Sotheby's, London, last week, a perfect copy of the fourth quarto edition of Shakespeare's "Tragedie of King Richard the Third," was sold for \$8,750 to A. Jackson,

and it is understood that it will go to America. The price is higher than any sum previously paid at auction for a Shakespeare quarto. The book was printed in 1605 by Thomas Creede, and was sold by Matthew Lawe, "dwelling in Paules Church Yard at the signe of the Fox, near S. Austins Gate." It consists of forty-six leaves. It is believed that only two other copies of this edition exist. One is in the British Museum and the other is now in the Bodleian Library at Oxford.

The United States Consul at Nottingham, Eng., in a report says that it is announced that a Lancashire mechanic, Dennis Flanagan, has invented a machine which will sew direct from two reels of thread, thus obviating the winding of spools and threading of the shuttles. Experts are quoted to the effect that if the invention is put on the market in a thorough manner, it will revolutionize the sewing-machine trade of the world. It is said there is an absence of complicated mechanism, which will enable the contrivance to be sold at a price far below that charged for most sewing-machines.

The Fore River Ship Building Company of Quincy, Mass., has closed a contract with the Southern Pacific railway for the construction of a six-thousand-ton turbine freight and passenger steamer. This craft will operate on the Morgan line between New York and New Orleans, and will be, when completed, the largest turbine propeller ship built in America. The new ship will be equipped with turbines of the Curtiss type, and will have a speed of sixteen knots an hour.

Shipments of Aroostook County, Me., potatoes have been completed for the season, and the record shows that of the crop of 1904 there have been transported 6,693,612 bushels. To utilize the surplus stock left in Aroostook County the starch factories were reopened in April and May,—something that has not occurred in years.

An important improvement in wireless telegraphy is announced by Professor Braun of Strassburg, the inventor of the system which bears his name. The professor has succeeded in directing wireless electrical waves in a single direction. Up to now it has been possible only to transmit waves in all directions. Much energy is saved by the new invention.

The total grain receipts at twelve important interior markets in the United States for the first five months of the current year aggregated 222,063,827 bushels. Of the different cereals received, wheat amounted to 55,004,352 bushels; corn, 87,022,899 bushels; oats, 55,942,368 bushels; barley, 21,520,747 bushels, and rye 2,573,461 bushels.

General.

On Henderson's Point, Seavey Island, in Portsmouth harbor, on the afternoon of July 22, will take place one of the greatest engineering feats, in the blasting line, that the world has known. Fifty tons of dynamite will then be exploded, with the hope of clearing from Henderson Point a ledge containing thirty-five thousand square yards of granite which for years has troubled mariners entering Portsmouth harbor. The weight of this big cliff is estimated at about seventy thousand tons. Three hundred or more holes have been drilled, in which the fifty tons of dynamite will be placed. These holes taper from six inches at the opening to two inches at the end. Three distinct circuits will be used, to avoid any possible chance of a portion of the dynamite failing to explode. The company which has taken the contract of removing Henderson's Point began the undertaking in 1902, and for three years the work has been in progress night and day. Since then, over five hundred thousand tons of rock have been blasted. To carry on the work the company has established a machinery plant worth \$100,000, and a coffer-dam costing almost as much as that has been built.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Obedience.

PROF. JOEL RUFUS MOSLEY.

To obey in the biblical sense means "to hear," "to hearken," to "be persuaded," to "be subject to" (Hastings' Bible Dictionary). In its highest sense it means to be at one with the will, purpose, and law of God; to be receptive to God, to respond to His wisdom, truth, and love.

Both the Old and New Testaments make obedience "the cause and condition of salvation." It is "the fundamental Old Testament virtue." Obedience was not only the cause and condition of all Israel's blessings, but disobedience was as certainly the cause and explanation of all her misfortunes. In the New Testament it is made the supreme test of Christian loyalty and Christian love (John, 14 : 15, 23). Indeed, to be a Christian, according to the New Testament standard and requirements, is to be obedient to God, Christ, and the right, and disobedient to all that is ungodly, unchristian, and wrong.

Abraham, Moses, the prophets, and all the heroes of faith in the Old Testament were examples of obedience. These Old Testament worthies not only put obedience above sacrifice, but also above prayer and prophecy. They saw that prayers that were contradicted by disobedient lives had little hope of acceptance, and that prophecy that urged disobedience was to be disregarded. Nevertheless, no sin of Israel was so great that it was not freely "forgiven when penitence manifested itself in the fruit of obedience." (See Deuteronomy, 4 : 30, Jeremiah, 26 : 13, and Article on Obedience in Hastings' Bible Dictionary.)

The great example of obedience is Christ Jesus himself, who did not his own will but the will of Him that sent him. As Professor Wernle says: "The most wonderful feature of Jesus is the co-existence of a self-consciousness that is more than human with the deepest humility before God. . . . He acts His whole life long under the stress of compulsion. . . . The consciousness of His call does not depend upon voices or visions . . . but simply upon inner compulsion. He has only one choice, to obey or disobey." Though he consciously communed with God and knew his Father as no other son has yet known Him, yet in his deepest and sublimest struggles he simply trusted, obeyed, and loved. "Though he were a Son, yet learned he obedience by the things he suffered; and being made perfect, he became the author of eternal salvation unto all them that obey him." He delighted to do God's will and found perfect freedom through perfect obedience.

The personal disciples of Jesus, by doing his will, which was the will of his heavenly Father, became the friends and the interpreters of their Master. Through the obedience of that faith which works by love, these men, without previous learning, influence, or position, became the authors of Gospels, the spiritual leaders and teachers of Christendom. "The Apostle to the Gentiles" was not only "not disobedient unto the heavenly vision," but he gave himself to the high task of "bringing into captivity every thought to the obedience of Christ." Through his obedience, even

more than through his training and natural endowments, he achieved greater results than any other apostle. His apostolic calling, like the Messianic call of Jesus, was a matter of inner compulsion: "Necessity is laid upon me; yea, woe is unto me, if I preach not the gospel." This keen sense of inner necessity and compulsion is possible, as a permanent possession, to the absolutely obedient alone.

Luther, the most significant figure in religious history between the days of primitive Christianity and the scientific Christianity of Christian Science, dared to disobey the superstitions and tyrannical opinions of men that he might be free to obey his truest perceptions of Truth. Like Paul, with whom he had much in common, he felt that a divine necessity was laid upon him to preach the Gospel, not after the traditions of men, but according to his understanding of the will of God: "Here I stand. I can do no otherwise. So help me God." He dared not be disobedient to the voice of duty and what he felt to be the leadings of God. He would go to Worms, or anywhere that duty led, "though there were as many devils there as there are tiles on the roofs of the houses."

Mrs. Eddy, whose life-work has brought unmeasured blessings of health to the sick, of comfort to those that mourn, and of salvation to those who felt themselves lost, has taught and written and lived as one who felt the inner necessity, realized the blessed privilege, and saw the wisdom of obedience to the highest revelations and promptings of the divine Mind. And she has sought above all else that the lives of Christian Scientists should be governed by and obedient to God; that their desires and thoughts should be brought into captivity to Christ, to Truth, and Love; and that no one should follow her except as she is obedient to God and follows in the footsteps of Christ (Annual Message to The Mother Church, 1902).

Even the children of this world, to whom Paul refers as "the children of disobedience," those who do not consciously strive to know and do the will of divine wisdom, obey most of the laws of the State and the customs of society, and submit themselves to rigid discipline as well as to superior authority. It is also the custom of the members of every movement, institution, enterprise, and calling to be obedient to the laws governing the same, and loyal to the ends they are designed to promote, and no one is foolish enough to expect to succeed as a student of any of the human sciences and arts who is not curious to know and willing to obey their laws. Then, too, strict, joyous, and intelligent obedience to rightly constituted and administered authority is a most important factor, if not the secret, of all worthy co-operative endeavor.

The moral philosophers have almost uniformly emphasized the wisdom and necessity of obedience to one's highest sense of good. Socrates accepted the worst punishment of the State rather than allow himself to become an example of disobedience to the laws he taught others to obey. The statement by Emerson, that divine guidance is revealed through obedience, is confirmed by all moral insight and spiritual experience. "We need only to obey. There is guidance for each of us, and by lowly listening we shall hear the right word." That all right action is submission,

Copyright 1905, by Mary Baker G. Eddy.

is confirmed by the spiritual perception of all men in their best moments.

The sense of inner compulsion and necessity that the best men and women have been under to obey God, rather than the dictates of the unredeemed human will, is the normal experience of those who deliberately will and strive to be obedient to the all-good and perfect One, and disobedient to all evil. In fact, one of the most blessed consequences of every act of obedience is the quickening of the inner sense of necessity for perfect obedience, while one of the worst penalties of every act of disobedience is the deadening of this sense. As obedience clarifies the perception of God, and awakens the conscience, so disobedience obscures the consciousness of good and sears the conscience. He that follows after Christ, the highest perception of good, "shall not walk in darkness, but shall have the light of life." And every step we take with Christ, every act of self-surrender to God, every act of obedience to the best we know, makes it more difficult to go backward, as well as more desirable to go forward. It tends to make obedience a matter of necessity as well as intelligent choice.

As previously indicated, God is the supreme object of obedience in both the Old and New Testaments; and no obedience is enjoined which is not in harmony with the most complete obedience to Him, His synonyms, manifestations, and attributes. Even the obedience He requires to be rendered unto His representatives, prophets, apostles, teachers, and servants is because, and only because, they are His,—the agents of His will, purpose, or law. His law is summed up in the commandments of our own true nature and being as well as in those of Revelation: Be perfect as God is perfect, and as Christ is perfect; be obedient to the highest conceptions of right and the deepest promptings of good. As Jesus said to the questioning lawyer, so Truth is forever saying to us in our better hours, our sincere moods: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. . . . Thou shalt love thy neighbor as thyself. On these two commandments hang all the law and the prophets."

In Christian Science we have a revival of the biblical objects, standards, and ideals of obedience. Christian Science makes the line of demarcation between God and the evil one, the perfect spiritual creation and the material sense of creation, Truth and error, right and wrong, the real and the unreal, so clear and simple that all who will to do His will may know whom and what to obey, and whom and what to disobey. And Christian Science, by revealing God as altogether good, lovable, and all-powerful, and evil as altogether repulsive and, in the truest sense, fleeting and unreal, gives the strongest incentives for obedience to the one and disobedience to the other.

According to Christian Science, to be obedient to God is to be disobedient to, resist and struggle against, all evil and the things that are harmful and enervating, as well as obedient, receptive, and responsive to all that is true, pure, harmonious, and good. In fact, to be absolutely obedient to God, to Christ, to the Spirit of truth, is to be obedient to all that God is, and disobedient to all that He is not. It means to be obedient to Life and the things that make for the perfection and redemption of mankind, and disobedient to all that interferes with the fullest, freest, purest, and most harmonious expressions of life. It means to overcome the last enemy, death, as well as the first enemy, sin. It means obedience to Truth, and the things that make for the love, freedom, and understanding of Truth, and disobedience to all falsehood, deception, ignorance, and slavery. It means to be obedient to Love, to the things that promote good understanding, good-will, concord, and co-operation, and disobedient to all that opposes these manifestations of Love. Obedience, in Christian Science, also means to do well whatever our hands find to do, to be true to every obligation, and honest in every relationship of life; and to be just, generous, and loving to all men, even to our enemies (See Articles on

"Obedience" and "Love Your Enemies," in "Miscellaneous Writings" by Mrs. Eddy).

Because Christian Science reveals God as being all-wise, generous, loving, and just, as always knowing, desiring, and willing the highest good of each and of all, it makes it less and less difficult, yea, the simplest and wisest thing we can do, to pray always: "Thy will be done." Indeed, as one really grows in the understanding of Christian Science, and learns the divine Principle thereof, he longs for freedom from the selfishness, ignorance, and tyranny of his own finite sense of will, and to be wholly governed by the will that is all-powerful, all-wise, unselfish, and good. In like manner, he longs to surrender his limited, finite, and imperfect sense, even to die to it, that he may be born to a knowledge of, be governed by, and really have for his own, the perfect Mind, Truth, Life, and Love.

Since Christian Science reveals the possibility as well as the desirability of every good achievement, and the ultimate defeat as well as the undesirability and folly of every wrong impulse and action, it makes it comparatively easy for Christian Scientists to endure trials, to overcome difficulties, and to rejoice in the midst of crosses and burdens that, were it not for this genuine Christian optimism, would frighten and discourage them, yea, paralyze their efforts and make their ideals seem as empty dreams. The optimism of the Christian Theism of Christian Science makes it possible to rejoice even in every necessary human footstep in the Christ-way from the material to the spiritual sense of being,—from error to Truth, from slavery to freedom, from sickness to health, from death to life, and from hell to heaven. It also makes it possible for us to keep step with our brother, to fulfil every human obligation, to obey all laws, ordinances, and statutes that are for our good and for the good of all. In a word, it makes the best and only way to God, as well as the knowledge of and conscious unity with God, a cause for great joy and continuous rejoicing. It makes obedience a privilege as well as a duty, a matter of free, intelligent choice, as well as a scientific necessity.

The Real and Its Symbol.

LEWIS C. STRANG.

PROBABLY no metaphysical idea is more real to mankind in general than the idealistic concept which is identified by the word liberty. For countless generations, men have talked liberty, thought liberty, fought for liberty, and died for liberty; and thus has the race of men proved that it does not question the reality of liberty, though that reality is purely metaphysical,—a state of mind not directly cognizable by the material senses.

In New York harbor there stands a giant Statue of Liberty,—the bold attempt of an ambitious sculptor to embody in matter an artistic ideal; but no one, not even the sculptor himself, fancies for a moment that the Statue of Liberty is liberty. The statue is merely the symbolic statement in terms of matter of a metaphysical reality, which has absolutely no connection with matter. So far from liberty is the Statue of Liberty, that the statue is meaningless, even as a symbol, except as the imaginative thought of each individual perceives the artist's ideal above, beyond, and apart from its crude material embodiment. The Statue of Liberty is therefore seen for what it is, as a suggestive symbol, only as the thought of those who gaze upon it is in touch with the purely ideal.

Crossing New York harbor in the mist of the morning, one might not discern the outlines of the statue through the pall of fog and smoke, but he would not be disturbed by this circumstance. Though the Statue of Liberty appears dim and indefinite through the thick atmosphere, the ideal of liberty remains just as clear, and just as real as ever. It is plain, moreover, that the Statue of Liberty is of no im-

portance whatsoever to the ideal of liberty, while the ideal of liberty is of supreme importance in determining the artistic worth of the statue. Indeed, the only value that the statue has as a work of art is due to the faithfulness with which it symbolizes an imperishable ideal, which an innumerable multitude of statues could neither change nor influence in the least. What if the statue were maimed or halt or blind? What if it were engulfed by the seas over which it stands guardian? What if it should crumble into dust with the burden of years and decay? What loss would there be? None—at least none that could be called irreparable, and for this reason: The ideal of liberty is not in the statue, and therefore can never be touched by anything that may happen to the statue. Even if destroyed, the statue itself would still exist in thought,—exist, too, in far more perfect form than could ever be expressed in matter.

As the metaphysical ideal, liberty, is real to the average human thought, so is the metaphysical ideal, man, real to the thought that is instructed by Christian Science. Mankind is not deceived into believing that liberty and the statue are one and the same thing. No more is the Christian Scientist deceived into believing that man and the corporeal body are identical. The Statue of Liberty symbolizes in a feeble way a glorious metaphysical reality. The corporeal body, in its natural state of health, vigor, harmony, and purity, symbolizes in a still more feeble way the glorious spiritual reality, man.

But what of the body that is diseased? What of the body which material sense says is dead?

Suppose that a sculptor should present a statue of hideous deformity. Would any of us be so deceived as to believe that such a deformed statue represented liberty, even though the sculptor's argument in favor of the anomaly were ever so plausible? Why, then, fear, when our "adversary, the devil," argues that a diseased, dying, or dead body is man? The ideal of liberty which is entertained by the sculptor, determines the character of the symbol which he fashions; so, too, the ideal of man—his nature, endowment, and place—which we entertain, has directly to do with the character of the physical symbol, the human body which we present.

One must know liberty to recognize the fitness and meaning of its symbol, and so likewise one must know man, the image and likeness of God, to distinguish between the true humanhood of Christ Jesus, the counterpart of the spiritual ideal (Science and Health, p. 561, l. 16), and mortal man, its unholy and unreal counterfeit.

How to Solve Life's Problems.

H. L. BROADBRIDGE.

THE world seems to be united on one all-important question, though it has searched in many avenues for a solution to the stubborn problem which has absorbed the time and attention of the ablest and wisest men through all ages; namely, how to improve the world and bring about a universal condition of health, harmony, and happiness. Philosophers have thought, educators have taught, scientists have speculated, doctors have drugged, ministers have prayed, labor has organized, states have framed bills and passed laws, nations have gone to war, while poets have put into song the loftiest ideal,—all to aid in bettering the condition of the human race. This is truly a noble purpose, for which every laborer will receive his reward, but at this time we are being forced to ask the question: "Has this energy and effort accomplished its purpose, and has the world grown better, does it fulfil the expectations of the longing hearts who yearn for freedom from their mental, physical, and financial slavery?" To the question: Has the world grown better? History answers, Yes. In reviewing the history of every hundred years we find a gradual improvement. The world has been turning very slowly from the material to

the spiritual, but it is gradually awakening to the great fact that in God and His promises alone can be found the correct solution of the all-important problem of human progress.

Christ Jesus stands conspicuous as the wisest philosopher, profoundest thinker, deepest scientist, most successful physician, most practical social economist, the purest and most consistent Christian; and after years of study, research, and observation, coupled with the practical application in his daily life of all he had learned, he summed up the entire situation, and gave its solution in the following words: "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Evidently the world cannot or does not grasp the meaning of this simple prescription, for it seeks relief in every other way. The world acts as if Jesus meant the reverse of this statement, for men seek first to supply their earthly needs,—it may be their education, business, pleasure, wealth, happiness, or health. These they strive to gain with the diligence and persistency with which they are commanded to seek the kingdom of God and His righteousness. Not a few would be ready to accept the kingdom of God if it could be attained with but little effort on their part; this, however, can never be done, as the kingdom of God is not a place or location, but a condition of consciousness, for we read in the Scriptures, "The kingdom of God is within you." The kingdom of God is realized when one submits to the control of Spirit, and lives in perfect harmony with divine Principle, and knows that good, and good alone, governs man.

To seek first this kingdom is to let Truth reign upon the throne of one's thoughts so that sin and sickness will be banished from our consciousness, and this seeking means more than reading the Bible or going to church. It is seeking to know God's will and striving to do it, keeping ourselves pure and spotless before the world, giving Him our first service and love, seeking not our own will but His, even at the expense of all earthly friends and possessions, and in proportion to the degree that we do this, to that degree are we solving life's problems scientifically, obeying the universal law of Love and harmony; and this is, indeed, realizing the kingdom of God. Striving means that we will bend all our energy, ambition, and desire to live the life of love. This honest, earnest effort on our part will enable us to come boldly to the throne of grace, and claim the promise which can never fail, that all things "shall be added unto" us,—health, happiness, success in every way; and it will also bring us the peace of God which passeth all human understanding.

Would it not be wise, then, if there are any problems we are trying to solve,—health which we are trying to regain, sorrow we are trying to rise above, or business in which we are trying to make a success,—to cease the effort to work it out upon material lines, and at least make an honest test of the truth of the Master's statement?

O Troubled over Many Things.

O TROUBLED over many things,
Choose thou the better part,—
Service unconscious of itself
And childlikeness of heart.

Why breathe Earth's heavy atmosphere,
Forgetful one can fly,
When the high zenith, infinite Love,
Allures us to the sky?

The virtues hide their vanquish'd fires
Within that whiter flame,
Till conscience grows irrelevant
And duty but a name!

FREDERICK LAWRENCE KNOWLES.
In "Love Triumphant."

Selected Articles.

A Heart-to-heart Talk.

The more I study it—and I am always ready to investigate and study—the more I believe in Christian Science. It might, perhaps, be termed the Science of Christianity; and more properly still, the meekness of Christianity.

During the past ten years I have watched the advocates of Christian Science. I have listened to the scoffers, and heard the arguments of the reasoners; and in the interim I have plodded along, intent on doing right, and have concluded thuswise:—

First, no man expects to succeed unless he at least pretends to be right morally and religiously. If he convinces the world he is right, he at least succeeds for a time. Second, having demonstrated that one can succeed if he successfully pretends to be right, it naturally follows that if he is right his election is sure. "There's a divinity that shapes our ends, rough-hew them how we will."

Again, there is a divinity that guards us. If we but seek it we can feel this, even as we feel the friendship of our fellows. A mortal man says, "I am ill." He forthwith sends for a physician—some other mortal man who has studied medicine and its uses—and pins his faith in that mortal man, while ignoring the healing power of man's Maker. What an exhibition of judgment! Every dumb brute, every bird, every living thing outside of man is its own physician, in that it is completely un- will of Divinity. But man, because of his "superior intellect," takes the bit in his teeth, ignores Divinity, attempts to cure himself, and—the undertakers are busy and the graveyards filled.

I believe in the efficacy of prayer. I believe that every man who communes with his Maker is a better man; I believe he sees his way more clearly in life. As he sees his way more clearly, and pursues it, he naturally occupies a better place in the opinions of those with whom he seeks companionship; and if he is thus improved socially and morally, why should he not be improved physically?

There is a tendency toward higher ideals throughout the entire world. People are talking peace and good fellowship where formerly they talked war. The flowers that bloom in the fields are attracting the attention of strong men, who used to tread upon them with the remark that flowers were for women and swords for men. To-day a man is estimated according to his love for his fireside; according to his belief in and reverence for a Supreme Being. "If he believes in God and loves his fellow-man he is fit to come among us," declare the Elks of to-day, and woe be to him who seeks admission and cannot answer in the affirmative. And thus it goes. Thus advances Christianity—Christian Science—the Science of Christianity—the Science of intelligence.

This has been a very curious world. It is curious yet, for that matter—curious because we are too ignorant to understand it. Ask the ordinary man if he trusts in God, and he answers, Yes; yet in less than a minute he trusts in nothing but himself, and he is in constant chase for that which is valueless to him save as a source of momentary pride; and we all know that pride precedes nothing but a fall. The Science of Christianity is simple, yet the world has been long in rising to the occasion. Every true mother teaches it to her son. In early manhood it seems so simple that it is thrown aside to master something more difficult and imaginary. But there comes an hour when all return to it, when we murmur in truth:—

Now I lay me down to sleep,
I pray the Lord my soul to keep.

and then, indeed, even though we live this life but a minute, it is as a disciple of Christian Science.

Yes, indeed; I am an advocate of Christian Science as I

understand it. The more closely a man lives to his Maker the more closely is he cemented to, not only his fellow-man, but to all that is best in life.

It is true that a father will protect, love, and guard over a faithful child. No less is it true that the Great Father protects, loves, and guards over all who are faithful to Him. It is a simple study; so simple that all may understand it if they will.

NAT BAKER [EDITOR].

The Inter-State Elk.

When one considers the remarkable growth of Christian Science during the past quarter of a century, and remembers the opposition of the combined forces of the world,—*materia medica*, theology, and scholasticism,—is he not warranted in believing that God has guided and is protecting it and those who are known as Christian Scientists? The Psalmist wrote, "By this I know that Thou favorest me, because mine enemy doth not triumph over me."

JAMES D. SHERWOOD.
El Paso (Tex.) Herald.

When a patient dies under the care of the family physician the newspapers publish nothing about it, except the paid advertisement of the funeral. Other patients have died under the same medical supervision; the doctor sends in his bill, and is ready to attend the next deathbed; everybody—except, perhaps, the deceased—is satisfied. But when a Christian Science patient dies, in most cases after being subjected to preliminary treatment by the doctors, the newspapers announce the fact in their largest type as startling news, and the Science healers are denounced as bigoted impostors.—*Town Topics.*

Our brother construes the Master's declaration "These signs shall follow them that believe," etc., as merely a promise, and not as a test of Christian faith. It seems to us, however, that the promise was made conditional upon the faith of the believer, and is consequently a test of such faith. He further says, "A man may be an honest Christian, a real follower of Jesus, and yet be lacking in his faith in the direction indicated." This we do not deny, for Christian Scientists are deeply conscious of their own great need of a fuller possession of that Mind which was also in Christ Jesus. It cannot be wrong, however, to strive in the direction named above, and the wonderful cases of healing which are now resulting from the practice of Christian Science is evidence that the teachings of Mrs. Eddy have enabled her followers to more fully approximate the injunctions of the Master.

RICHARD P. VERRALL.
Glens Falls (N. Y.) Times.

As I take it, the real Christian Science practitioner (who should not be confounded with the quacks who hang on to the ragged edge of every new cult) is inclined, when he fails, to lay the blame on the practitioner and not on the remedy. I have a sort of sneaking idea that if the professors of *materia medica* would adopt the same attitude towards failures in the application of their remedies it would at least lead to considerable progress in the practice of medicine.

In knocking around for about forty years, during most of which time I have been able to "sit up and notice things," I have learned this: Whenever you find a man or woman whose life touches that of others for betterment and help—as that of this woman [Mrs. Eddy] certainly has—then in the life of that person there is strength.

But when I came away from the Christian Science lecture I was convinced of one thing. My ministerial friend was mistaken when he said that Christian Science is a fad. A fad is something that you put on like a mackintosh. Christian Science, on the other hand, is an integral part of the life and being of its believers.

WILLIAM IV.
Atlanta (Can.) Free Trader.

The Lectures.

Evanston, Ill.

The announcement of the lecture to be given by Mr. Edward A. Kimball on Christian Science drew a large audience last night [May 26] to First Church of Christ, Scientist. In introducing the speaker of the evening, Mr. C. E. Ware, of the Evanston church, said:—

Christian Science is a remedial agent which appeals to all classes of people, because it is showing man how to get away from the degradation of sin, how to escape the tortures of disease, and how to adjust his life to the demands of right thinking. Because of erroneous philosophies of life, man has been tossed about as a ship in a storm without a rudder. Through the understanding of Christian Science, the waves of the boisterous sea of human thought are being stilled, and man finds that divine Mind protects and guides him through his many vicissitudes into the calm and quiet waters of a scientific understanding of God and man's relations to Him.—*The Evanston Press*.

Biggsville, Ill.

Miss Mary Brookins of Minneapolis lectured at High School Hall, Tuesday evening [May 23], on Christian Science. The lady was introduced by Professor Fawley in the following words:—

Since time immemorial mankind has worshiped at the shrine of the superior. Principle is eternal, but its efficacies are wrought most effectively by those who meet the dictates of duty bravely and conscientiously. All institutions have heroes and heroines, but to me it seems that there is one deserving of particular mention, and whose name and fame will be venerated till the end of time. I refer to that godly woman, Mrs. Eddy, who a few years ago founded The First Church of Christ, Scientist, of Boston, from whose threshold to-day a vast army of adherents send their praises and their benedictions. I am not a Christian Scientist myself, and I am not familiar with its teachings, but to any institution that has for its object the amelioration of the world's misery, I gladly give my admiration and respect.

The Clipper.

Detroit, Mich.

Mr. Bicknell Young lectured on Christian Science at the Detroit Opera House, Sunday afternoon, May 21. He was introduced by the First Reader of First Church of Christ, Scientist, Miss Alice Thrall, who said in part,—

With one hundred and sixty-seven Christian sects the world may well ask, "On what new ground a one hundred and sixty-eighth?" On no *new* ground. Christian Science brings no creedal message. Each development of religious thought, from the time of Abraham to the present day, has brought to the world a clearer, higher interpretation of God. Moses' message to a pantheistic age was of the unity of God. "Hear, O Israel: the Lord our God is one Lord." This statement denied the dualism of good and evil that obtained in every other religious system, and this understanding was the basis of the miraculous history of the Hebrew people. Jesus of Nazareth looked deeper, and lifted thought to the apprehension of that effulgent statement, "God is Love." Higher interpretation there cannot be. Love has well been styled the "great Crown Name" of God.

Yet something is lacking, that man may fulfil the measure of grace demanded by Christ, and is it not an understanding of the method of applying to the problems of sin and disease the law of the all-loving God? To bring this understanding is the sacred mission of the author of "Science and Health with Key to the Scriptures," those Scriptures whose leaves are for the healing of the nations, and Mrs. Eddy's marvelous discovery is that this same God, who is Love, is the very Principle of the universe. From

this scientific basis we are enabled to know Him with demonstrable accuracy. It is not what man speculates about God, but what he knows of Him that is valuable.

Christ Jesus challenged the religious thought of his age with the daring assertion that he knew, that is, understood God; "Ye have not known him; but I know him," and the proof he offered of this knowledge was his demonstration of unity with God's will in healing the sick and the sinful. He finally defined immortality as nothing else than this right knowledge: "This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent." It is, then, the mission of Christianity to know God as Jesus knew Him, to apply the laws of this life-giving knowledge as he applied them. If Christian Science offers a key to this understanding, it has a message indeed. If it can arrange, classify, and demonstrate this knowledge, it is Science indeed.—*Correspondence*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

An Amended By-law.

ARTICLE XXXVII.

IN BRANCH CHURCHES.—SECTION 3. The three largest branch churches in each State of the United States and in Canada, shall annually and alternately elect a Publication Committee to serve in each of their localities. Each county of Great Britain and Ireland, through its three largest branch churches, annually and alternately elects a Publication Committee to serve in its locality.

Each church is not necessarily confined to its own members in selecting this committee, but if preferred can appoint a Publication Committee conveniently adapted therefor, who is in good fellowship with another Church of Christ, Scientist.

This By-Law applies to all states except Massachusetts, in which the Publication Committee is elected only by the Board of Directors of The Mother Church.

Signs of the Times.

Is God infinite? Yes. Did God make man? Yes. Did God make all that was made? He did. Is God Spirit? He is. Did infinite Spirit make that which is not spiritual? No. Who or what made matter? Matter as substance or intelligence never was made. Is mortal man a creator, is he matter or spirit? Neither one. Why? Because Spirit is God and *infinite*, hence there can be no other creator and no other creation,—man is but His image and likeness.

Are you a Christian Scientist? I am. Do you adopt as truth the above statements? I do. Then wherefore this meaningless commemoration of birth days, since there are none?

Had I known what was being done in time to have prevented it,—that which commemorated in deed or in word what is not true, would never have entered into the history of our church buildings. Let us have no more of echoing dreams. Will the beloved students accept my full heart's love for them and their kind thoughts.

MARY BAKER EDDY.

Pleasant View, July 18, 1905.

Mrs. Eddy's Requests.

THE following article is copied from *The Boston Herald* of July 13, and we take pleasure in republishing it so that there may be no excuse for misunderstanding our Leader's position respecting this important matter. The article appeared in the *Herald* as follows:—

During the annual business meeting of The First Church of Christ, Scientist, in Boston, the Rev. Mary Baker G. Eddy, through a written message, requested her Church to make special prayer in behalf of the peace of nations. Later she issued another request, advising that this special prayer be discontinued.

The second request evoked a great deal of comment from the public press and other sources, which indicated that it had been taken to mean a cessation of prayer for peace rather than a cessation of the special prayer which the first request enjoined. Mrs. Eddy has issued the following, presumably in explanation of her real attitude:—

"HEAR, O ISRAEL: THE LORD OUR GOD IS ONE.

"In no way nor manner did I request my Church to cease praying for the peace of nations, but simply to pause in special prayer therefor. And wherefore this asking? Because a spiritual foresight of the nations' drama presented itself and awakened a wiser want, even to know how to pray other than the daily prayer of my Church.—'Thy kingdom come, Thy will be done in earth as it is in heaven.' I cited as our present need faith in God's disposal of events; faith, full-fledged, soaring to the Horeb height brings blessings infinite, and the spirit of this orison is the fruit of rightness.—'on earth peace, good will toward men.' On this basis the brotherhood of all peoples is established; namely, one God, one Mind, and 'love thy neighbor as thyself,' wherein and whereby the infinite God, good, the Father-Mother Love, is ours and we are His in divine Science.

"MARY BAKER G. EDDY.

"Pleasant View, Concord, N. H., July 12, 1905."

A Serious Mischance.

THE failure of many attempts made in the United States to secure special legislation in behalf of the medical fraternity, has not deterred the Ontario Medical Association from making a similar attempt in Canada. The proposed action of the medical association is thus set forth in *The Ottawa Journal* of July 11:—

"Medical Men are Taking Action.

"WILL HAVE LEGISLATION INTRODUCED TO MAKE ILLEGAL PRACTICE BY CHRISTIAN SCIENTISTS AND SUCH LIKE.

"Legislation will be introduced at the next session of the Ontario legislature by the Ontario Medical Association to make illegal the practice by Christian Scientists, faith curists, and all other persons not physicians from some authorized college.

"This was decided upon at the meeting of the Ontario Medical Council held at Toronto last week. Fakirs in medicine were considered as a menace to the people of Ontario, and it was thought that parliament should take steps to prevent them from practising in Ontario unless they had taken the same course and passed the examinations required of regular physicians.

"Dr. R. E. Webster of Ottawa was appointed a member of the board of examiners."

Such legislation as is proposed by the physicians who constitute this association could have no other effect than to compel every sick person to employ a medical doctor or to suffer without help, and if the practice of medicine were an exact science and uniformly successful in its results there might be some shadow of an excuse for thus compelling people to employ physicians; but it is admitted by the doctors themselves that the effects produced by any remedy differ so widely in different cases, as to stamp all medical practice as experimentation rather than scientific demonstration. When we add to this uncertainty of the system, the element of "surgical mischance" which enters into some cases, we wonder that any one can be induced to consider for an instant a proposition which, if carried into effect, would place the lives of the people at large entirely within the keeping of a single interested class.

Is it not an extraordinary coincidence that an "extraordinary surgical mischance" such as we refer to, is reported in the issue of *The Ottawa Journal* from which we have quoted above? The report is as follows:—

"Left the Forceps in Patient's Body.

"A WATERLOO COUNTY WOMAN THE VICTIM OF AN EXTRAORDINARY SURGICAL MISCHANCE.

"Berlin, Ont., July 11.—About three years ago, Mrs. Adam Moir, of German Mills, a hamlet three miles southeast

of Berlin, underwent an operation that required the use of forceps in the abdomen. One of these instruments slipped its hold and escaped the notice of the operator. It remained in the woman's body until Tuesday, when the steel instrument, about five inches in length, was removed, after its presence and location had been positively settled by the use of the X-rays.

"The instrument was taken out successfully, but peritonitis set in, and Mrs. Moir died to-day. She was thirty-two years of age, and leaves a husband and one son."

Canadians are proverbially an intelligent and liberty-loving people and we cannot believe that they will consent to deprive themselves of their liberty in a matter so important as the "issues of life and death."

ARCHIBALD McLELLAN.

Fact and Folly.

MORTAL sense is certainly a queer compound, and the disclosure of its confused and contradictory ingredients would afford continued amusement if the sequence of the situation in human experience were not so saddeningly serious.

There lies before us an extended editorial criticism of Christian Science which is very much in evidence. The writer begins by scoring other critics in unmeasured terms for the nonsense and folly of their course, and then proceeds to indulge in precisely the same type of discreditable comment. He concedes that Christian Science is a great blessing to many, commends its teaching that we should live a quiet, regular life, abstain from luxury, preserve our temper, be kind and just to our neighbors and business associates, and remain invincibly cheerful. He then adds, "So far as Christian Science has made lives cleaner and better, an attack upon it as un-Christian, or unscientific, is worse than folly. Such Christianity is better than most church members practise; such science is quite as worthy as much that passes under the august name. . . . Whatever scoffers may say, this faith would never have found adherents all over this country, and even in Europe, had it not been advertised by its loving friends. The true missionaries of Christian Science, the people who have built its costly churches, are those who, as they think, have been brought back from the brink of the grave after regular doctors have failed to relieve pain or have abandoned hope."

Having said all this, and having recognized that, as a body, Christian Scientists would be classed with the intelligent, respectable, and well-to-do, he proceeds to declare that the text-book of Christian Science which contains the teaching he has commended, and in the study of which many respectable people are finding what they regard as a great good, is "a prodigy of ignorance and illiteracy," a mystifying "jargon" which nevertheless "delights its readers;" that argument is quite thrown away upon its students, since "they attach no definite meaning to words and seem incapable of distinguishing between premise and conclusion!" In a word, a very large body of those who are characterized by intelligence,—the ability to conduct commercial affairs successfully, are nevertheless incapable of sane judgment, quite daft indeed, because, forsooth, they do not entertain the critic's view of things. The argument (?) briefly stated is this: Christian Scientists are thoughtful and sincere, but they do not endorse all my opinions, hence they are fools! The extent and continuance of the use of this argument by those who are pleased to criticise Christian Science is a distinctive feature of our times, and when we consider the contrast in general illumination of thought, it must be seen that such a show of wilful prejudice is more discreditable to those responsible for it, than was the sanguinary intolerance of which it is a relic, to the denizens of the Dark Ages.

Recognizing that healing is effected through Christian

Science, the critic undertakes to explain the phenomena by reference to the significance of two facts; namely, false belief as to the nature of disease, and "mental expectancy" as to its cure, and in this he is quite unintentionally and unintelligently supporting some of the most important contentions of Christian Science. With the frequently recurring statement of physicians and others, that many ailments are simply thought to be, are only an expression of abnormal mental conditions, Christian Scientists are entirely agreed; they go farther, and declare that diseases of every nature are of this begetting, and since false mentality which is thus accepted as the occasion of disease, is canceled or destroyed by true mentality, or right ideas, it must be admitted that Christian Scientists are entirely consistent in regarding the unquestioned right-mindedness of Christ Jesus as the panacea for every ill. Having demonstrated this proposition for themselves in the measure of their realization of that Mind,—its purity, unselfishness, and love,—they can stand on sure ground and have only regrets that others are not willing thus to verify the facts.

Christian Scientists are also in entire agreement with critics as to the beneficial influence of a "mental expectancy" which is grounded in a true premise, a right apprehension of the reality of being. It is apparent that, whatever the temporary effects of unwarranted belief, disappointment must ultimately be added to the sum of human distress when hope and expectancy are not thus grounded in Truth, and hence the endeavor of the Christian Science practitioner to awaken in the mind of the sufferer such a consciousness of the omnipresence and all-inclusiveness of Spirit,—divine Truth and Love,—as will free him from belief in and dependence upon negating material sense testimony. "Hope thou in God," is one of the Christian Scientist's invariable prescriptions, and the expectancy which springs from a right understanding of God and man, is indeed the faith which heals. If, therefore, "mental expectancy" is so good a thing, the Christian Science teaching which awakens it must be a good thing, and therefore commendable.

In closing, our critic says, "The only thing, apparently, that can check the spread of Christian Science is the education of the masses to a knowledge of the causes of disease and of the power of the mind over the body." Here again he is unintentionally funny, for the "education of the masses" begets intelligence, and Christian Scientists being recognized as intelligent people, they must be the product, in so far, of the course which is commended as a sure antidote for them!

How much wiser and better it would be, if those who do not understand Christian Science would simply say so, and devote their energies to following the best light they have. If necessary, they might say with propriety that the teaching of Christian Science, as they understand it, does not appeal to them, but since it does appeal to those who are perhaps equally intelligent, they will hold judgment in abeyance until they have given the subject the careful, truth-seeking investigation it merits. This course would in our opinion be much less amusing, but far more creditable and Christian.

JOHN B. WILLIS.

The Attainment of Freedom.

THERE are certain elements of consciousness which offer sure proofs of man's divine origin, and which give promise of an immortality that is altogether different from a mere prolongation of mortal existence,—lighted at one hour with high hopes, benighted at the next with despair. Among these qualities which defy destruction and survive shipwreck is the unquenchable desire for freedom, a desire which, however mistaken in its seeking, must continue the search until that which alone can satisfy is attained; namely, spiritual freedom. Christian Science reveals the fact that inasmuch as all true freedom is spiritual, all bondage is the result

of belief in materiality, and until this is understood, freedom is impossible.

Let us picture a man placed in circumstances which seem to render him wholly independent of the will of others, surrounded by everything which can minister to his comfort and happiness. Is he free, or even independent? Far from it. The greater his material possessions, the greater his dependence upon others and the greater his bondage, until he learns how to emancipate himself, and it often happens that the deprivation of material possessions is the first step toward deliverance. Happy are those who can say to fortune,—

Smile and we smile, the lords of many lands;
Frown and we smile, the lords of our own hands;
For man is man and master of his fate.

How to attain the mastery of ourselves, the freedom within, is the problem of all the ages,—the goal which so many blindly seek, and which all shall at length find through the compelling power of divine Love. The pity of it all is that so many years are wasted in the pursuit of that which could not satisfy were it reached. To be free, to be masters of our fate, we must gain the liberty conferred by spiritual law, the law which annuls belief in materiality, with all its vain promises of power and pleasure, and its lengthening chain of pain and penalty. So long as a material body is held to be the representative of manhood, so long will thought dwell in self-imposed bondage,—sin, sickness, and want being the “keepers of the prison.” When, however, the thunders of Truth heard by St. John utter their apocalyptic voices, the unreality of material conditions is revealed; divinely-awakened energies assert the supremacy of Mind, and tell of universal freedom, won through unfaltering loyalty to the demands of spiritual law.

How clearly the Master pointed the way to this freedom, and how unmistakable is the meaning of his words in Christian Science! He said, “If the Son therefore shall make you free, ye shall be free indeed,” and he proved at every point what freedom means and how it is to be attained. He not only made it clear that there is no freedom in sin, he revealed the way of escape from it. Many who listened to his deathless words were deeply disappointed when he spoke of this way; they even resented the implication that they were in any bondage for which they themselves were responsible; they failed to see that the hated foreign yoke was but the symbol of mental servitude to false beliefs concerning God and man, and that it could only be removed as his yoke was assumed and the divine government of mind and body recognized and obeyed.

While the struggle for freedom must go on until it is realized, and while even a small measure of it is worth more than all else, it can never be reached in its fulness until we subdue every thought which opposes itself to Christ, Truth; thus gained, it can never be lost. Says the poet.—

Freedom's battle, once begun . . .
Though baffled oft, is ever won.

ANNIE M. KNOTT.

A Correction.

THE telegram to our Leader from Mrs. Stetson and practitioners published in last week's issue was printed exactly as received by Mrs. Eddy, but we are now informed that a mistake occurred in its transmission and that it should have read as follows:—

New York, July 8.

Rev. Mary Baker Eddy, Pleasant View, Concord, N. H.

Your public acknowledgment of our expression of loyal, loving allegiance inspires us with fresh courage to labor, watch, and wait with you for the fulfilling of the law of Love.

AUGUSTA E. STETSON, and Practitioners in Reading Room
of First Church of Christ, Scientist, New York City.

Letters to our Leader.

Laconia, N. H.

My Dear Mrs. Eddy:—Believing it will make you very happy to hear a little about the good work that is being done in Laconia, N. H., I write you. About three years ago I was healed in Christian Science, after medicine had failed and surgery was the only hope held out by the medical profession. After I was healed I came to Laconia, to be alone with God and to study this wonderful Word of Love which had come to me in a very dark hour. I soon found it my duty to arise and spread the good news; work came in the most unexpected and unlooked for ways. I did my best to express the truth, never doubting that God was working with me. A room was opened for the Sunday services and Wednesday evening meetings. It was also used as a reading room, where all your writings may be obtained. From few in numbers we have increased so that at times the room is hardly large enough. A Sunday School was started a few weeks ago with two scholars; last Sunday we had six, and one little boy has earned almost money enough to buy a copy of Science and Health. Many young people are earnest students and working to establish the Cause of Truth. I have seen diseases yield quickly when the truth was spoken; a case of instantaneous healing of a severe cold; warts that covered a boy's hands and arms healed in one treatment. A man was healed of the tobacco habit of thirty years' standing, by attending the meetings; the morphine habit healed; glasses taken off and eyes healed; and many others. All are to-day earnest students and workers in the Field.

It was my privilege, and a blessing that I daily realize more and more, to be called to the Massachusetts Metaphysical College last December. Since going through class, the nothingness of all phases of error has been proved to my own consciousness much more quickly. A dear woman with rheumatism, not able to go out or do her work, called for help, after I returned from the college class. To-day she is doing her work, attends the services, and is an earnest student of our text-book. Surely the fields are ready for the harvest. Love is expressed by the people and many thoughtful seekers are asking, What is Truth? My daily prayer is to be found worthy to lighten your burden as a messenger of good; to heal as the command is given.

From your loving and humble follower,

MISS BESSIE M. HOUGHTON.

Fayetteville, Ark., April 17, 1905.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—It may be interesting to you to know of a few pioneer Christian Scientists “out West,” who are trying to follow you, our dear Leader, by working in the Master's vineyard. We are not yet organized into a Society, but regular Sunday services are held at the home of the writer. Some time ago we started a lecture fund, which has slowly increased until now it amounts to fifty dollars. We have decided to send it to the Building Fund of The Mother Church, trusting that Divine wisdom will provide means for a lecture when we are ready for it. The amount was sent to Mr. Chase to-day.

One of the steps preliminary to a lecture, we think, is to bring Christian Science before the people, therefore we asked permission of the librarian to place some of your works in the library of our State University at this place, which was kindly granted. Science and Health, “Miscellaneous Writings,” and “Unity of Good,” are now in the school, performing their mission of pointing the way to health, harmony, and holiness.

Your Christlike life is a constant inspiration to “go, and do thou likewise.”

Yours sincerely,

MRS. INEZ DROKE.

Testimonies of Healing.

After ten years of constant travel, much of it at night, I found myself in a most dreadful and discordant condition. I was not sleeping, could not rest, and was in constant pain from exhaustion and trouble in the spine and shoulders. I became morose, discouraged, worn out,—a perfect wreck. I asked my physician for advice, and he pronounced mine the worst case of mental and physical breakdown he had ever seen. I had lost flesh, and was on the verge of insanity. He strongly urged me to give up my work, to rest, and to make a business of getting well. I secured a leave of absence from my duties, and at once began my search for health. I took a trip out West, also went to Europe, and to South America, but upon my return was no better. I underwent three operations, had allopathic, homœopathic, and osteopathic treatment, gave up tobacco, coffee, and desserts. I took specially prescribed athletic exercises, hot, cold, and salt water baths, and made a six-weeks stay at the mud-baths of Indiana. At this time, and after a year of earnest effort to get well, I was in worse condition than ever, and was committed to an asylum. Becoming worse from this confinement, I was removed to my physician's home, where I lived some time, under his constant care. In June, 1903, I was still at the home of my physician, walking the streets all night, worn out, discouraged, full of hate for every one and every thing, discordant and wretched in mind and body, and full of the pains and aches that so surely accompany such a mental condition. I had given up hope, had sought every avenue of escape that I knew of, but all were closed. I believed myself a mental and physical wreck, unfit either to live or to die.

The morning of June 30, 1903, after passing an awful night, the thought entered my mind, suddenly and forcibly, that I must go home. The doctor advised strongly against it. I felt I should not go, but I went. Two hours after I reached home, a stranger called and said he had heard through friends of mine that I was in a very serious condition, and asked if I knew anything of Christian Science healing. I did not, but said I had proved everything else worthless, and was ready to try it. The black clouds of trouble were thick over me at this time, and the next day I had my first treatment in Christian Science. After a vigorous, helpful talk, the practitioner gave me a treatment, and that night, for the first time in years, I slept like a healthy child. I had no pains or aches and was a changed man the next morning when I arose. There were rifts in the black cloud that had seemed to cover me, and in two months I was perfectly well.

Although a great many discordant and, as the physicians had said, incurable troubles held me, every one of them was destroyed by the truth. Since my healing, I have proved that I am in perfect mental and physical condition, and was never before so free from discord and trouble in every way. My healing was a revelation to me and a transformation as well; and Christian Science has taught me, that sickness, hatred, malice, and all inharmony begin to disappear, and health, harmony, happiness, and love to take their place, as we grow in understanding of this truth that so surely makes us free.—JAMES F. BEEBEE, New York, N. Y.

At the age of eleven years I was sent to school, most of my childhood before that time having been spent abroad in a very light-hearted way and with few lessons. The sudden change to close confinement and long hours of study were too much, and I seemed to be always tired. The teacher and every one thought I was lazy, and urged me on till the middle of the second term, when I broke down. The doctor came and said it was a mental and physical overstrain, resulting in curvature of the spine. He forbade any study for a year and I was put into a plaster of Paris cast for six months, then for five years I wore a stiff felt

case, so that I could not possibly bend my back. During this time the pain grew worse and worse, long illnesses becoming frequent, until I was nineteen, when, through overstudy, I once more collapsed. A specialist was then consulted, who said that the spine was weak and not straight, but the root of all the trouble was displacement of several internal organs, caused by mental and physical overstrain when a child. This doctor ordered another instrument, saying I must never lift heavy weights or strain myself in any way, take no violent exercise and very little cycling.

In this condition, Christian Science was brought to me and I was healed of asthma of sixteen years' standing. My general health was so improved that I did not mention the internal trouble, or have treatment for it, but I left off wearing the instrument. One Sunday morning about two and a half years ago, while tidying my room, I did for the first time what the doctors had forbidden me ever to do, I carried a heavy pail of water downstairs. The old trouble all came back as bad as it had ever been. I lay down, saying to the friend with whom I lived that I had hurt myself and could not go to church. She put Science and Health by me and went out. After a little time the pain lessened and I was able to take up the book. It opened at page 209, and as I read, the truth became so clear to me, that as divine Mind governs and controls the universe, just so every organ in my body was controlled and kept in place by divine intelligence—and I was healed. I got up and dressed,—perfectly well,—and though many times since then I have lifted very heavy weights I have had absolutely no trouble.

As my thought travels back over those long years of suffering and unhappiness my heart is filled with love and thanks to God for giving to the world, through Mrs. Eddy, Christian Science which heals us of all our diseases.

MARY ALEXANDER, London, England.

In 1887, a dear friend who seemingly was not at all well, and could not get relief from physicians, medicine, or change of climate, told me she was going to try Christian Science, which was the first mention of this method of cure that I had heard. At the same time, she persuaded me to take the lessons with her, which were to be given by a pupil of Mrs. Eddy who was visiting in our home town in Ohio. My father readily gave his consent, and my sister and I attended the lessons with my friend, together with some ten or twelve others. My friend at the same time took treatment, and was healed.

I had early become a member of an orthodox church, but much that was taught there seemed inconsistent. I thought, however, it was my benighted understanding that caused my dissatisfaction, and hoped to see light some time in the future. This hope was realized when I took the lessons, and light was thrown on much that I could not understand before. Years passed, with varying degrees of interest, during which time I dabbled in mental science, theosophy, etc., but did not seem to make any progress; until in 1902 I found myself in Buenos Aires and my oldest child had a trouble which sent him to the hospital for a month, when I came to the conclusion that there was something in Christian Science which I had not got. In the mean time I had been receiving from my mother and my friend occasional copies of the *Sentinel* and *Journal*, and as I had Science and Health, I set to work to study alone as best I could, with the aid of the Bible. Shortly after my son left the hospital, we went to London, where we remained some months, and I attended services as regularly as possible at Second Church of Christ, Scientist, meeting many kind friends whose conversations and suggestions were very helpful, so that when I returned to Buenos Aires, I felt I had made some little progress, and possessed a happiness and peace of mind I had never known before. I need not

tell of the many demonstrations made in the family, but will say that when error shows itself, even the children hold the thought of divine Love.

Until a few months ago, no Christian Science services had ever been held in Buenos Aires. About that time, a family from Santiago, Chili, stopped here on their way to the States. The wife and mother of the family had been instantaneously healed of cancer in San Francisco, three years ago, and upon her return to Santiago had successfully started Christian Science work there and had accomplished a beautiful work.

These good people made themselves known to me, having received my address from a mutual friend who was also interested in Science. I at once notified those whom I knew to be interested, and we have continued to meet and read the Lesson-Sermons, and we trust the work will grow as rapidly as in other parts of the world. There is interest on the subject, as will be seen when I say that at our first meeting there were eight and at the fourth twenty. Christian Science has received a wonderful impetus in this great city, and we believe that its beneficent work is but just begun.—SARA E. McCURM, Buenos Aires, S. A.

A few days ago I was visiting some friends in whose library hung an old English quotation, "Think and Thank." Like the still, small voice of Truth it whispered to me, and I began to think, Have I been thankful enough for the blessings which have come to me through Christian Science? I then realized that I had not in written words given expression to my gratitude. In humility and with a heart hungering for more light, I thank God for all I have already received, and for the awakening which comes daily as the truth unfolds. I have been healed through Christian Science of many diseases, both mental and physical, and the gratitude I owe to our Leader, Mrs. Eddy, is as limitless as is her love for humanity. I am thankful to her for making the way so plain, through the restoration of this truth, by which I have been able to demonstrate the presence of health, happiness, and a glimpse of heaven and life eternal.

I thank the contributors to the *Sentinel* and *Journal* for their helpful words, a reflection from the divine Word which brings healing in its wings, and always answers a need in spiritual development. I am truly grateful to God for all my blessings, which I count daily, and my earnest desire is to "Think and Thank" more and more.

IDA MORGAN TRUNKEY, Chicago, Ill.

I esteem it a pleasure as well as duty to give my testimony. I had been sick all my life, had tried many kinds of material remedies and had many doctors. I was led, over a year ago, to try Christian Science treatment, by the kind words and happy life of a good friend. I write with pleasure my thankfulness for what Christian Science has done for me. I am most thankful to my heavenly Father, and to Mrs. Eddy, through whom this blessed health, peace, and happiness has come to me. When I think of the many ills I suffered from, I feel like praising God all the time. I had been more or less troubled with sore eyes from a little girl, and at times had to stay in a dark room and blindfolded. I had worn glasses for years, and even then could not see to read at all by lamplight and very little by daylight. I can now read any kind of print and do not wear glasses at all. I suffered terribly with rheumatism for years, and at times it was so bad in my neck and shoulder that I could not rise without help. I also had a disease of the hip which caused me much distress at times, and I had sore mouth and throat for years, besides a constant cough. I had also suffered from a child with constipation. I had been subject to the grip, the attacks lasting from three weeks to three months. I had a weakness which was born with me, which the doctors had said would sooner or later require an operation, and that even then I could not be strong

and well. My kidneys troubled me so that at times I was deathly sick, but thanks be to God I am now well and happy, and can do as much work as any one I know of. I have not taken one drop of any kind of material remedies in the meantime.

I now could not live without Science and Health. I have already bought two copies,—one for myself and one for a sister. Through my healing she and her husband have become very much interested in Science and they love the literature. A dear old lady reads the papers and prizes them very highly. I now mean, through this blessed truth which has been brought to me, to spread the gospel of "on earth peace, good will toward men," God helping me.

I am very glad that through Christian Science I have been made to know that my strength comes from God, the giver of all good and perfect gifts. I am grateful for this truth which makes us free from sin, disease, and death.

MISS JULIA PECK, Hornellsville, N. Y.

Four years prior to my first knowledge of Christian Science, an inner abnormal growth made its appearance. I purchased a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and read it, but not understandingly. In two years from the time I purchased the book, I was taken severely ill with erysipelas and a complication of diseases. My life was despaired of by my family and physician,—one of the best doctors in town,—and my family thought it necessary to have a consultation held. They called in another physician, and the result was the verdict that I could live but a few hours longer. Each member of my family was called in, and my two sons that were three hundred miles away were telegraphed for, but I never once believed that I was going to die. I was in bed nine weeks, and after I was able to get up, the doctor said I would need to have an operation performed, or I could not live long. I asked him if it was very dangerous, and he said it was, but that some few had lived through it. I decided that if I had to die it should be at home with my family, not under the knife. I was taken sick in February, and from from that time on till September, I struggled very hard to live, but it sometimes seemed that I would have to give up. I had a great deal to contend with, which was caused from the abnormal growth.

At last I had to give up, and I told my husband and children that I could not live many more days if I did not get help from some other source. They decided to call in a Christian Science practitioner, and when she came I asked her if she thought I could be healed. She replied that others had been, and that God was no respecter of persons. I told her if she could do anything for me, to do it, that I was so near death I could not help her in any way. I could not even read, I had no appetite, but it was not more than three days after I commenced taking treatment that I had a ravenous appetite,—it just seemed that I could not get enough to eat,—and nothing I ate hurt me. My healing was very slow, but I clung to my only hope. From the first, however, the character of the disease seemed to change, and one after another of the ailments left me, until all had disappeared except the abnormal growth, and that has almost disappeared. I have not taken any medicine since I took this treatment, which was three years ago.

These are only a few of the blessings received; the spiritual uplifting is past description. We are daily experiencing the ever-presence of divine Love, who healeth all our diseases, and we are now enabled to see God, good, reflected everywhere. A new life began for me with Christian Science. The consciousness of man's oneness with God, the assurance of His ever-presence in every detail of life, gives me a feeling of safety and of calm, a comfort and confidence which I had never known before.

I wish to express my never-ending gratitude to God, and to our noble Leader, who so patiently leads poor humanity

out of darkness into light, and makes it easier for all to know Him, whom to know aright is life eternal.

MRS. W. G. KILLIAN, Durango, Col.

About eighteen years ago I was called to Illinois to help take care of my mother, who had gone there a short time before on a visit, and had been taken sick with what the doctors called consumption. I was very much shocked when I saw her, as she was a mere shadow of her former self, and it seemed impossible that one could change so in such a short time. We thought we had done all that could be done, and must make the best of it, but God came to our aid and sent us a messenger of Truth. My aunt, being in a neighboring town, met a dear woman who told her that my mother could be healed, and arrangements were made for her to visit my mother, with the result that she began taking Christian Science treatment and was healed almost immediately, although she took treatment for some time for fear of a relapse. In a day or two after she began treatment she concluded she would go to the woods, so she started out, and in place of going to the gate she went to the back of the lot and had to climb a high board fence. When told to come back and go through the gate, she said, "Oh, no, I can climb the fence, I feel like a bird." In a few days she took a long walk to visit a sister, and in six weeks she was on her way to Lamar, Mo., a distance of several hundred miles, at which place she still lives, and is a living witness to the healing power of Christian Science. After my mother's healing I clung to Christian Science, although I knew nothing about it to speak of, only that she was healed, and that was enough.

For nine years I never read a word on Christian Science, nor met but one Christian Scientist. Nine years ago I had my first absent treatment. From that time on I began studying, and am still at work. Many blessings have come to us through this truth, and although we have been called upon to pass through deep waters, God has been with us and we have been comforted.

About two years after I came into Christian Science, our little boy was taken ill in the night, and at seven in the morning he had a raging fever and did not know his papa or me. It seemed very serious at the time, but with the help of a practitioner the ailment was met, and at ten o'clock he was sitting on the floor, eating an apple, without a trace of fever or any other discord. In addition to this we have had spasms, whooping-cough, measles, and many other ailments quickly overcome by the truth. When my first child was born I lingered from Tuesday morning until Thursday, then I wired a practitioner at Topeka, Kan., for treatment. That night every one in the house, myself included, slept well all night and at seven the next morning the birth took place and without pain. All my children were born under Christian Science treatment, and I can truthfully say without pain. When the last two came, no one was present but my husband, who is with me in Science, and we are rejoicing more and more each day in this truth that makes free. Two years ago, my father was taken with pneumonia in a very severe form, and although he was seventy-four years old, and it was very cold weather, he was not in bed one whole day. In less than a week he was out helping carry in wood and water. These are a few of the blessings that have come to me through the study of Christian Science, and I am very thankful to our dear Leader for her labor of love.—CLARA A. SEYFFERT, Joplin, Mo.

Christian Science found me in a most miserable condition physically, and mentally in despair. My husband and baby had gone from me within a year, and after that came such a physical collapse that I had to be carried in the arms for successive weeks during a period of eight long, weary months. Everything that man could do was done, and still no help came. During all this season of darkness my heart longed for God, and although prayer after

prayer seemed to meet with no response, I continued to pray. I *knew* there was a God somewhere, and somehow I felt that He knew about me; so I prayed on and on, with just as much courage and faith in finding Him, as if every prayer had been directly answered. Everything else failed me. At this time Christian Science came, and I learned that every prayer had been answered, and God was now revealed. Health and strength came rapidly, hope awoke again, and with these came a love for God and love for my fellow-beings that I had never felt before. I knew it was the Christ who had come to heal my grief-stricken heart, and had rolled away the stone from the grave of my loved ones. Ever since this revelation of Truth came to me, I have thought of them as they are—not in the grave; but living in God, just as I am living in Him.

We should never cease to be grateful for the ability to understand the unfoldings of divine Love. I have learned to love God through Christian Science, and to love the noble woman who discovered it. I love the work, because it is a joy to prove that God is ever-present Love, and because I have seen the truth taken to many dark places, leaving them illumined with light. Can we ever be grateful enough to Mrs. Eddy, that patient, God-like woman, so pure that the light had to shine through her consciousness, and who is teaching us how to live and to follow the example of the Master?—BEULAH G. HINES, Houston, Tex.

My attention was called to Christian Science through my sister's taking treatment; and because I was always suffering from headache and pain in the nape of the neck, I also asked for treatment. The pain soon ceased and my eyes improved. I now read and sew without glasses, although I am eighty-five years of age, and had always needed them before. I attend the services and meetings regularly, and I have learned that wind and weather cannot harm me. I am very grateful to God, and to our dear Leader, Mrs. Eddy.—FRAU LUISE HAACK, Berlin, Germany.

I was sick for five years and spent nearly all I had for doctors, but it did not do me any good. A friend then told me about Christian Science, and I sent for treatment. It has helped me very much. I am well now, and can work as hard as ever. Truth has healed me, mind and body, and I am trying to be a Christian Scientist.

I got a copy of Science and Health and I love to read it. In Christ, Truth, I trust for my health.

ELIAS POWELL, Ringgold, Pa.

[Written for the *Sentinel*.]

A Song of Courage.

MARY J. ELMENDORF.

SING, O my lips, in a reverent strain!
Though the night is darksome and fear seems strong,
Love is at hand, and His mercies sustain.
Light is achieved by the ladder of song!
Sing, O my lips, in a reverent strain!

Smile, O mine eyes, in expectant content!
Thy marge overbrims with a silvery shower,
Yet over thy sorrow a rainbow is bent,
Harmony hushes the pain-haunted hour.
Smile, O mine eyes, in expectant content!

Abide, O my heart, in the refuge of peace!
Though fierce be the tempest, the oaks ever stand.
Stars shall flash out as the storm-clouds decrease,
And the Voice of the Master ring through the land.
Abide, O my heart, in the refuge of peace!

From our Exchanges.

Nothing not true is good, and everything perishable, the hay and stubble of superstition and distorted myth, must be consumed by the white heat of the fire of Truth. Very timorous was the religionist of half a century ago. He could not see that nothing can harm the really true, and that nothing not really true is worth saving. Religion to him was something very precious and very delicate. It had been handed down from his father's fathers, and if carelessly handled it might fall and be hopelessly broken. To doubt that the world was created in six days of twenty-four hours was sinful heresy. Man originally was worth while, but a snake and a woman had been his undoing, and even his Creator could only be just to him by crucifying His son, who was also Himself. The end of existence was getting saved, and that was only possible to the limited number who could believe something that was unbelievable to any man who dared to think. This was the religion of the churches. How much of it is there left?—*The Pacific Unitarian*.

A god outside his finished universe, a magnified human being, a god who sits in the heavens and looks down upon the earth as a king sits on his throne, or a judge on the bench, is still more largely than any other the popular conception of how the universe is governed.

The conception, however, seems cruder, more irrational, now than in the days when blatant unbelief delighted in declaring there is no loving and conscious God. Unbelievers are more modest. They delight less in shocking the pious neighbors. It seems a paradox; but it is true that unbelief is more reverent, more conscious than it once was of the crudity of its conceptions, and the magnitude, the infinitude of the subjects it seeks to handle,—mysteries before which the little, infantile mind of man must remain prone with humility and wonder.—*The Christian Register*.

We need to utilize more fully the moral value of Jesus in Christianizing and spiritualizing all life. For long centuries he has been buried under a heterogeneous mass of theological misconceptions. At last criticism has so far done its work that the true figure is emerging into clearness of moral meaning. The metaphysics of the Nicene creed and its successors help no man to God; but the person, the character, the blameless and beneficent life of the Nazarene help every man who really knows them.

REV. DR. PHILIP S. MOXOM.
The Christian Register.

The spirit of Christianity is that rare quality that we call winsomeness, because it wins hearts. The Christian disposition is the greatest thing in the world. One Christian age was marked by the primacy of theological opinions; another, by the primacy of ecstatic experiences; the last and highest will come when the faithful shall seek above all things, and shall find, the mind that was in Christ.

Western Christian Advocate.

The *Congregationalist* says the Inter-church Conference on Federation, to be held in New York, November 15-20, promises to be one of the most important gatherings of the fall, as it will be the first great delegated conference of representatives of seventeen of the leading Protestant denominations of the country, with an aggregate membership of seventeen million persons.

The more entire the emptying of self and removal of the pride that makes one wilful and disobedient, the more fully does one experience the power of Christ's salvation and the higher does one rise in Christian joy and power.

The Watchman.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

National.

An attempt to secure laborers in large numbers to work on the Panama Canal is to be made at once. Bids will be asked by the acting chief of the office of Panama Canal Commission, for two thousand each of Chinese, Japanese, and Italian laborers. Bidders will be requested to submit separate bids as to the amount per day for which the laborers of a certain nationality will work, and also the amount the Government will be required to pay to get the laborers on the isthmus of Panama. Under the plan proposed the contractor will land his laborers on the isthmus. These laborers will personally apply for appointment. Appointments will be made out the same as in the case of every other employee of the Canal Commission. The Commission believes that the price asked for the laborers will vary from seventy-five cents to \$1.50 a day. The bids will be opened August 15.

There is a rumor that the chairman of the Eastern Yacht Club is endeavoring to interest Sir Thomas Lipton and other prominent yachtsmen on the other side in an ocean cup to be offered and raced for next year, the trophy to come either from King Edward or Sir Thomas Lipton, the Eastern Yacht Club to have charge of the affair, with the start off Marblehead.

There is also another rumor that arrangements are now going on for a series of international races between boats of about thirty-one feet length, to be raced annually and alternately on both sides, the first race to take place at Kiel for a cup offered by the German emperor.

Commander Peary says, "With the first really satisfactory vessel, and with the reasonable prospect of driving her to latitude eighty-three, which is three and one-half degrees farther north than I have ever taken before, I regard the prospect of my reaching the pole next spring as excellent. If we can reach eighty-three degrees with the Roosevelt, the distance to the pole will be no greater than I have already covered on four different sledge journeys over the

Arctic ice." He expects by the 5th of August to be in Arctic waters.

It is reported from Shanghai that the boycott of American goods is now working, but it has been agreed that the completion of all running contracts for supplies will be allowed. Meanwhile all the Chinese shops refuse to sell American goods, including Standard oil. All schools and colleges in this section have decided to discard all American books.

The Interstate Commerce Commission has instituted suits under the Elkins law against eighteen western railroads, which have ignored the order issued a year ago by the Commission, that the rates of freight on live-stock must not be higher than the rates on dressed beef and other packing-house products.

Foreign.

The Venezuelan authorities have instituted proceedings against the French Cable Company, for damages incurred by the Government for the cable company's alleged participation in the Matos revolution. This is a different action than that decided against the company on March 31, which resulted in declaring the company's concession null and void, and assessing it in damages for failure to fulfil the terms of its contract. Evidence of a most compromising nature is said to be in the possession of the authorities.

China has officially notified the Powers that she will not recognize any arrangement regarding Manchuria concerning which she has not been consulted beforehand. Before addressing this note to the neutral Powers, she sent to St. Petersburg and Tokio an identical note containing this notification. The communication is briefly worded, and is so expressed that it calls for no reply. It had been stated that China had asked to be allowed to take part in the conference between Russia and Japan.

The bill for the separation of Church and State in France has passed the Chamber of Deputies by the decisive vote of 341 to 233. The system ultimately to be swept away by the bill dates from 1801, when Napoleon and Pope Pius VII. established a Concordat by which, in return for the privilege of nominating candidates for ecclesiastical honors, the French Government agreed to pay the clergy.

The Governments of Great Britain and Spain have accepted the invitation of the Sultan of Morocco to attend the international conference on Moroccan reforms, on condition that the contents of the programme to be discussed by the conference be communicated to them beforehand.

Industrial and Commercial.

Sheffield has recently put upon the market two types of tool steel of interesting quality. In one of these, the "Unor Steel," an effort has been made to produce a tool steel of high cutting speed. In tests made with twist drills of this steel at the Sheffield Testing Works, on a railroad tire made of Commell's steel of .49 per cent carbon, forty-nine holes, each 15-32 inch in diameter and 1 7-8 inch deep, were drilled at an average speed of twenty-five seconds each, the tools used being left in good condition. The other invention is of striking character, the material produced being capable of retaining a keen cutting edge under very severe tests. Some pocket-knives made of it, and whetted to a razor edge, were tried upon a piece of hard wood containing many knots. This was vigorously slashed with the small blade of one of the knives. It was uninjured, and was still sharp enough to shave with. Another curious feature was the fact that this steel, while hard enough to cut glass, is not brittle like ordinary hard steel. Struck over a table edge by an iron bar, the blade bent to an angle of sixty degrees without breaking. Files made with this steel were found to wear four times as long as ordinary steel. This new material can be sold at a low

figure, and is likely to prove very valuable in manufacturing razors, pocket cutlery, circular saws, and similar articles.

After one hundred and thirty-three days, the great teamsters' strike in Chicago ended on the 20th in a victory for the merchants. The strike has cost the merchants ten millions of dollars, caused the sacrifice of nineteen lives, over four hundred injuries to as many different persons, nine hundred arrests, and a loss in wages of \$500,000 to teamsters. There were 4,128 men on strike or locked out. The number of firms involved was 135, and the daily cost to the city for extra police was nearly \$4,000.

The United States Department of Agriculture has conclusively demonstrated that ripe fruit, well refrigerated before shipment, will arrive sound under ordinary railroad refrigeration, even after being from ten to fifteen days en route.

The statistics compiled by the various automobile trade associations show that there are about fifty-three thousand motor cars in use in this country, the first cost of which aggregated \$70,000,000.

General.

The Victoria Falls bridge, over the Zambesi gorge in Central Africa, which has just been completed, is the highest bridge in the world. The waters of the gorge which it spans have never been fathomed, and no one knows their depth. It was over fifty years ago that the gorge and the famous Falls at their head were discovered by David Livingstone. The total distance by railroad from Cape Town to the Falls is 1,631 miles. Travelers from London are now carried to the Falls in twenty-one days, whereas prior to the opening of the line their transportation was a matter of months. At the Falls themselves there is a hotel where accommodation is provided for eighty guests.

The Royal Commission appointed in February, 1903, to inquire into the means of locomotion and transport in London, has issued its report, in which it recommends the widening of many important thoroughfares, and the construction of two great avenues, one running east and west four and three-quarters miles long, and the other running north and south four and a quarter miles long. Each avenue would be one hundred and forty feet wide, with four tramway tracks on the surface, and four electric railway tracks underground. The estimated cost is from \$125,000,000 to \$150,000,000.

According to the *Daily Mail*, Rubens' posthumous portrait of Charles the Bold, which has been missing for two hundred and sixty-four years, has been found in London. The portrait was catalogued among Rubens' effects in 1640, but it was lost in 1641. It seems that it passed into the possession of Philip IV. of Spain. It was probably taken by one of Napoleon's generals to France and thence to England.

Excavations made around Hermosillo, Mexico, have resulted in the unearthing of several old monuments bearing Chinese inscriptions. News of the finding of the monuments has caused some excitement among the archaeologists, because they are believed to prove the theory that Mexico, in past centuries, was inhabited by Orientals.

A new record for the ascent of Mt. Washington by an automobile over the carriage road has been made in the time of 20m. 59.28. The record made last year was 24m. 37.68.

London's gas-light plant has 2,116 miles of mains, sells its gas at seventy-one cents per thousand cubic feet, had in use last year 439,252 meters, and consumed 1,703,839 tons of coal a year.

The annual cost of the French army is \$135,000,000, of the German \$160,000,000, of the Russian \$200,000,000, of the English \$265,000,000.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The Declaration of Independence.

W. D. MC CRACKAN.

CHRISTIAN SCIENCE startles thought by statements of fact which are contrary to physical testimony, but self-evident in the eternal realm of beyond-physics or metaphysics. Such statements are truly scientific, although they are generally denoted as abstract or transcendental. Public opinion is still much inclined to be skeptical as to the practical value or availability of statements which cannot be propounded in terms of matter, and yet the investigator into any kind of knowledge who would allow himself to be deterred from further investigation by the abstract nature of the statements used, would make no progress at all. Indeed humanity has generally resorted to abstract statements in order to mark the gradations of its advance towards better conditions. Almost every step away from the slavery of evil in its various forms, and in the direction of the greater freedom of good, has been signalized by some proclamation of metaphysical facts, which humanity at large has by no means either proven as yet or even admitted to be true. The value of proclamations of this sort is in direct proportion to the metaphysical or spiritual truth they contain, and to their denial of beliefs which physical testimony declares to be established and obvious.

A study of the Scriptures will show that they especially abound in enunciations of the kind indicated, signaling growth away from matter and its limitations into Spirit and its boundless freedom. The Christian Science text-book elucidates the spiritual meaning of these passages, and makes them available as prayers, affirmations, and declarations of the power of good over evil.

But while public opinion may be willing to concede that it is perfectly natural for the Scriptures to contain statements of fact contrary to physical testimony, it is not generally realized how frequently statements of this same character occur in the best of what are known as secular or national documents.

Our own Declaration of Independence is a case in point. Though drawn up by the American colonists in revolt, it is in our day as highly valued by the English people themselves as by us, and by all friends of humanity everywhere. The reason is not far to seek. The Declaration of Independence contains a few statements of fact which are contrary to physical testimony, but which appeal to the spiritual sense of all men who love mankind, and thus they receive a generous stamp of approval, although the full import of these statements cannot be said to be generally understood even to-day. Viewed superficially, or from the standpoint of physical testimony, these statements in the Declaration of Independence might be called a hodge-podge of expressions of abstract hope which ignore the real facts of life, and are inexcusably beside the mark, as well as unscientific to the last degree. Hence, in spite of its historical worth and all its weight of tradition and national prestige, the Declaration of Independence has by no means escaped adverse criticism from those who cannot appreciate metaphysical truth. It was wrong from the heart of a new-born nation in the hour

of common peril, and so it has touched the heart of humanity at large, even though some of its phrases are still very much in advance of the average comprehension. Of course it is not claimed that the metaphysical statements in the Declaration of Independence can be taken as guides to heaven, harmony, or as explanatory of the Truth of being, but under the spiritual lens of Christian Science these few words in our national document do acquire a profounder meaning, and our admiration is heightened for the insight and farsight of the good men who affixed their signatures to statements so much in advance of their own times. The main body of the document consists of matter which has long since become obsolete. But side by side with this temporary and vanishing view of affairs the signers of the Declaration of Independence also subscribed to words which have the ring of immortality. They agreed in saying:—

"We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain unalienable Rights; that among these are Life, Liberty, and the pursuit of Happiness."

Not without some show of reason, objectors can say it is self-evident that all men are *not* created equal, whether they be considered from the standpoint of physique, or of social, economic, or political conditions. We are told that some are tall, others short; some fat, others lean; some are born rich, clever, enterprising, or healthy, others poor, stupid, lethargic, or sickly. When the phrase "all men are created equal" is interpreted as applying to human rights, other objectors urge that the differences between men, enumerated above, make equal rights impossible in human society. And yet the signers of the Declaration of Independence were rightly inspired when they made the statement that "all men are created equal."

It is not necessary that they should have understood the full purport of this saying, carried to its highest spiritual interpretation, in order to earn our gratitude; but Christian Science reveals in its teachings that their statement was true in a sense that does not appear on the surface.

It should be understood that the real man, to whom such statements do apply, is not a piece of anatomical mechanism, controlled by material forces and subject to physical phenomena, but that he is made in the image and likeness of God, the one Mind, Spirit, and is, therefore, mental or spiritual, and not material. The immortal ideas of God are His children, and they are indeed created equal in their immortal rights, in their opportunities, in their access to God.

But Christian Science goes farther than the phrase in the Declaration of Independence was intended to go, for it declares that all God's children are not only created with equal rights, but are also created perfect. To state that all men are created perfect does not imply that they are all alike. Imagine a perfectly kept garden, containing every kind of flower; these would differ very strikingly one from another, but each would be perfect in its way. It would be noticeable that each flower expresses an individual idea and seeks a certain environment where it would find the most congenial surroundings. It would also be found that if, for example, the little violet, perfect in its way, fragrant and dainty within the sheltering shade, and the American

Beauty rose, conspicuously lifted into the glare of light, should try to exchange places, the result would be disastrous to both violet and rose. Yet they are created equal, and each is a perfect flower.

The garden of perfect flowers is the kingdom of heaven, which is here and now, to be discerned by all men, as they awake to realize that man is spiritual and not material. In that day the perfection, as well as the equality of men, which already exists in reality, will be made manifest to all, and the statement in the Declaration of Independence will be proved in a manner which the signers of that document were not capable of explaining to the world, because they did not understand it.

Individual men have their distinctive capabilities, their special functions to perform, and they find their right places when they turn to the one Mind, Spirit, which is God, for guidance.

There is metaphysical discernment also in the declaration that all men "are endowed by their Creator with certain unalienable Rights; that among these are Life, Liberty, and the pursuit of Happiness." Interpreted by Christian Science these capitalized "Rights" are recognized to be veritable heirlooms of man, and they constitute part of his eternal birthright as the child of the heavenly Father. Christian Science teaches that God is Life, eternal Life, hence man, made in the image and likeness of God, must express this eternal Life and be immortal. Through spiritual sense we are enabled to battle with the false belief of doom and death, and to master it daily until such time as the last enemy shall be completely and finally destroyed. A right understanding of "Liberty" ensues when the material and magnetic influence of self-will is disobeyed, and liberty is learned to be not a license to do as the general human consciousness may direct, but as God, good, wills in His beneficent wisdom and loving kindness. Liberty thus interpreted means obedience. It carries with it a sense of profound gratitude and great peace.

Above all, this right sense of "Liberty" leads Christian Scientists out of the mazes of fear into the glorious freedom of the sons of God. Nor can "the pursuit of Happiness" ever betray the faithful Scientist into false positions when holiness is made the inseparable companion of happiness, and this is the teaching of Christian Science. Many weary and long-suffering patients who come for Christian healing are so broken in spirit that they say happiness is not for such as they, and imagine they belong to a class apart, to whom "the pursuit of happiness" must ever be a hollow mockery. Such people can often be helped by bringing them to a recognition that "the pursuit of happiness" is a universal right, and that Christianity means happiness now and here, as the result of overcoming contrary beliefs, fears, and a death-dealing distrust of God.

This brief examination of certain statements in the Declaration of Independence is intended to show that humanity instinctively makes its periodic proclamations of progress in the terms of metaphysics, and does not allow the obvious testimony of the physical senses to contradict such statements of fact. Therefore any criticism of Christian Science which may be made on the ground that it transcends material sense testimony and human experience, and establishes itself upon metaphysical evidence and spiritual comprehension, is rebuked even by the customary phraseology of mankind in declaring its independence from unjust conditions, outworn and outgrown.

Advancing Steps.

J. E. FELLERS.

IT is well to meet all with a cheerful smile, and to speak a kindly word; it is well to lend a helping hand to those whose lines have fallen in unpleasant places, but the very best help we can give to others is to live from day to day as

closely as possible to the great truth revealed to us in the Bible and in Science and Health. In this way we inspire others to look up and away from the things that blind them, and this is what Jesus meant when he said, If I be lifted up I will draw all men unto me. In our Christian activities we should keep a steadfast eye upon the sweet promises of our Saviour, and we should not forget that a full realization of these promises comes as successive steps are taken, and these steps must be taken from the point where we are at any given hour. Before we take the step which brings us to the top of the mountain peak, we must first take those which successively lead us to the last one, and each must be taken at the proper time.

Those who are unacquainted with Christian Science, and who look in wonderment upon its marvelous work, are asking that old question, "Art thou he that should come?" Whoever gives to humanity the evidence of a consecrated Christian life,—as described in the Sermon on the Mount and shown to us again by Mrs. Eddy,—is giving the best answer to that question. He is proving by work well done that Christian Science can do all for humanity which has been claimed for it. He has learned that while it is a wonderful thing to evangelize self, it is even more wonderful to evangelize by precept and example those with whom he comes in contact from day to day. Step by step he has attained to his present understanding of Truth, and step by step he will rise to still higher demonstrations.

* We hear one ask, "How may I learn these deep truths which make a Christian Scientist?" Just take firm hold upon the highest spiritual fact you have ever learned, cling steadfastly to that fact amid puzzling doubts, and "In the secret place of the most High" declare and realize God's allness until you are lifted to a still higher understanding.

One of our great American poets, standing upon a hill-top one winter's evening, was reflecting as to what particular line of work he should follow. He was a young man and had made no choice. He had a sense of doubt and uncertainty. His attention was attracted to the flood of light that overspread the sky as the sun went down. While contemplating the beauty of that New England sunset, a solitary bird on steady wing sailed along the horizon just above the snow-covered hills that stretched away to the west. He watched the aerial traveler until it disappeared from view. Then he felt a new hope springing up within him. Before he slept that night, he wrote the lines "To a Waterfowl," the last verse of which indicates clearly that his thoughts had risen above material sense.

He who from zone to zone
Guides through the boundless sky thy certain flight,
In the long way that I must tread alone
Will lead my steps aright.

Light.

B. H. NORTON.

The entrance of thy words giveth light; it giveth understanding unto the simple.—PSALMS.

THE word light, even when taken in its literal meaning, signifies much. Light seems to simplify our existence upon earth because we depend upon it in many ways. Take the daylight; what would our existence be without it? Not very happy, to say the least, now that we have tasted of its beauties, but how often do we stop to realize what this light really is to us? Daily should we offer a prayer of gratitude to God for this alone. Then take the beacon-light; where would the mariner be if it were not for this light to guide his craft? Is our gratitude going out to God that our brothers and sisters are being guided across the waters by these lights?

Light is an idea which we could dwell upon in a thousand ways, and see the good it produces, but there is one light we must know more of, and that is the divine light which always has been and always will be. This light is the Life

of men, their guide to eternal life, and it never goes out. It is the light of intelligence, understanding, wisdom. This light shows us how to shine out that others may clearly see the way to follow. Christian Science explains to us how to find this light and keep it ever with us, glowing in our spiritual consciousness. It shows us how to reach God while here upon earth; and where God is there is light forever, and we can never be in darkness. Christian Science dispels all dark beliefs from our state of consciousness, and lets in the light of understanding which should always be there. This light came to Paul and to others in his day, "To open their eyes, and to turn them from darkness to light, and from the power of Satan unto God."

As we are awakened from our darkened material beliefs, our eyes are opened to the real light that has always been around us, but we have not seen it, because a veil of material belief has prevented us from seeing beyond materiality.

Now, as the sense of self is dispelled and we seek the light of life, we find that we can only receive by giving. A light where no one can see it is useless, so we must give out if we expect to receive. Any demonstrations of healing that are given at the Wednesday evening meeting, no matter how small they may seem to us, will give light, and thus aid others who may be floundering for just that help, even as a ship without a beacon to guide it. I know that the mere mention of a bruised finger which was healed in five minutes' treatment, brought enough light to another to give a good testimony relative to one of his first demonstrations, made years before. We cannot afford to let our light be hid. We should not be afraid of the ridicule of any so-called friends, but should take our position and hold it even though the whole world turn against us. God is our shield and buckler.

One of the latest attempts to heal disease is by the light from radium. Christian Science heals all manner of disease by the light of Truth, and shows us how to find this God-given light, and reflect its rays through the darkened sense of the patient until his eyes are opened and the darkness disappears. In this way Jesus healed. He opened the eyes of the multitude to the spiritual light, and took them up and out of their beliefs in matter, and showed them its nothingness. The Psalmist said, "For with thee is the fountain of life: in thy light shall we see light."

We must work and walk with God in every conscious thought, to have this light and reflect it. The road may seem steep at first, but the clearing away of the stumbling-blocks will make our progress safe and sure.

Our dear Leader, Mrs. Eddy, has never swerved from her path, nor allowed her light to burn low. Her work is a proof of the light she is reflecting, and by following the teachings of her grand book, "Science and Health with Key to the Scriptures,"—each statement held within our consciousness, as one would set a diamond in a golden sunburst to reflect its rays of light,—the truth reflected by us will light the way for struggling mortals till they reach a position of absolute freedom, where they will themselves reflect God.

The Study of the Lesson.

MARY L. BEST.

"READ, mark, learn, and inwardly digest." This command I seem to hear repeatedly in regard to our Lesson-Sermons, and I know that, in proportion as I obey it, there is an increased understanding of the message contained in the Scriptures. Many incidents and experiences in my daily life and work would, probably, pass by unnoticed, and their spiritual import be overlooked, were it not for some words of the Lesson that come at the same time, and teach me just what these things mean. The Lesson thus becomes a teacher and healer, and we cannot afford to neglect it. At first reading a few of the thoughts impress us most, then others

at the next reading, and so on, until, when it is finally read at the Sunday service, the bud has developed into full bloom, and our appreciation of the flower is in proportion to our interest in the unfolding of the bud.

One morning before breakfast, I was reading the Lesson on "Mind." A section which explained the difference between immortal Mind-reading and mortal mind-reading (Science and Health, p. 83), was particularly interesting to me, and my earnest desire to discern clearly the difference, was more than usually satisfied at this reading. When the section was finished, I seemed impelled to stop and declare the truth for a patient whom I was helping at that time. Then I went on and finished my reading of the Lesson. I learned afterwards that on this morning the little girl had wakened with a violent headache, and had turned at once, with child-like faith, to God and asked Him to help her. Her prayer for healing, and mine for understanding, uttered at the same time, were both heard and answered. It was the operation of immortal Mind controlling the human mind that led me to declare the truth that morning, and her need was discerned, not by any process of mortal mind-reading, but by immortal Mind, which is ever near, and responds to every call for divine aid. Had it not been for the study of the Lesson I would probably not have received this teaching.

In reading the Lesson we imbibe more of the truth than we are always conscious of, just as the healing effect of truth is experienced even when not fully recognized. I remember once, after having seen a patient receive immediate relief, I was conscious of a great sense of gratitude. Upon analyzing this feeling, I found that my gratitude was not so much because of the healing that had been done,—not that some one had been sick, and was healed,—but rather because of the understanding that there is no sickness, and the peaceful sense I had of God's omnipotence and omnipresence. I could see that this sense was both natural and real.

The next day, on reading the Lesson, it was clear why my thoughts had followed this trend the day before; and although I had not especially noticed the references, I must have received their teaching; for they brought a clear realization of Truth's ever-presence and power.

That it is a sermon unfettered by human hypotheses is undeniable. My appreciation of the Lesson-Sermons increases daily, and I am only too glad to express my gratitude to God, to our Leader, and to those whom God uses in preparing these Lessons for us.

The Music that Carries.

I've toiled with the men the world has blessed,
And I've toiled with the men who failed;
I've toiled with the men who strove with zest,
And I've toiled with the men who wailed.
And this is the tale my soul would tell,
As it drifts o'er the harbor bar:
The sounds of a sigh don't carry well,
But the lilt of a laugh rings far.

The men who were near the grumbler's side,
Oh, they heard not a word he said;
The sound of a song rang far and wide,
And they harkened to that instead.
Its tones were sweet as the tales they tell
Of the rise of the Christmas star—
The sounds of a sigh don't carry well,
But the lilt of a laugh rings far.

S. W. GILLILAN, in *Success*.

The exclusionist in religion does not see that he shuts the door of Heaven on himself, in striving to shut out others.—EMERSON.

Chroniclings.

If the Chronicler should be favored with the experience frequently enjoyed by gentlemen in ancient folklore and modern romance, of having his animation suspended for a few centuries and "coming to" in A.D. 2405, let us say, with his twentieth-century memories, standards, and points of view unimpaired, he would no doubt find much to surprise him in his new environment. He does not think, though, that he would be greatly surprised to find all mechanical means of communication between mind and mind as obsolete as telegraph wires seem likely soon to be, mind reading as universal an accomplishment as breathing now is, every one's inmost thoughts an open book for every one else, and the secrets of all hearts disclosed. The Chronicler fully expects this to come to pass in the natural and ordinary course of human development before the history of the human race reaches "Finis." The expectation is not merely fanciful. It is based on reasons whose full statement is now unnecessary, because the mere suggestion that such a development is possible is all-sufficient for the purposes of this Chronicling. Attention, though, may briefly be called, in passing, to these facts: First, the extreme inadequacy for their purpose of all existing mechanical means, including written and spoken language, of communication between mind and mind, which suggests the inevitability of their supersession by something better, because men are not going to remain always content to be islands "shouting unintelligibilities to each other across seas of misunderstanding." Second, the obvious impossibility that men can ever attain to the realization of even human ideals of human perfection so long as it is possible for a man to hide his real mind from his fellow-men and so long as his thoughts are almost wholly free from the wholesome restraint imposed on daily actions by "a decent respect to the opinions of mankind."

But though the Chronicler would not be surprised, under the given conditions, to find himself living in an age of universal telepathy, with his crude, undisciplined, anarchistic twentieth-century mentality utterly bared to all the minds about him, he would no doubt be greatly inconvenienced and embarrassed. He even suspects that the twenty-fifth century persons about him might regard him as a criminal so dangerous, and a source of corrupting error so menacing that they must, for the continued welfare of society, relegate him to permanent unconsciousness, and that he himself would welcome his relegation as a refuge from intolerable shame. And, mind you, the Chronicler, who is by no means a self-depreciating person, has no idea that his inmost thoughts are in the least degree more unfit for publication than those of most of his contemporaries. Consider your own case, good reader. You are, the Chronicler takes for granted, a most respectable and worthy person, loved and honored by many whose good opinion you value. How would you like to live in a community of mind-readers; to be aware that every least, unspoken thought that found even momentary lodgment in your mind was known to all your neighbors and that you couldn't possibly help it? Don't you think you'd move out of that telepathic neighborhood in a hurry? You have dreamed—everybody has—of finding yourself publicly appearing in a state of extreme dishabille, unable to escape from the eyes of the multitude, unable to find aught wherewith to veil yourself, unable to reach a hiding-place. You can recall the feeling of shame and wretchedness which that rather common form of nightmare brings with it. Suppose that, in your dream, it was not merely your body, but your soul that crouched naked before all the world of those who love and those who hate you. What sort of a nightmare would that be? Is there a human being alive who can, without a touch of terror, contemplate the possibility of an invention or discovery that shall lay bare to all the world his every thought? Life would be intolerable,

impossible even, under such conditions, you say. And you are right, premising that men are as slovenly about their minds, as careless about the visitors they admit to the sanctuary of their mentality, when this supposed invention or discovery is perfected, as they are now. There is no disputing your contention, and your contention is a terrible arraignment of humanity in its present stage of development and of modern civilization. It is a confession that the world is inhabited exclusively by whitened sepulchers, inwardly full of corruption and dead men's bones of savagery, folly, error, superstitions, fears, wickednesses.

Consider the supreme importance among the facts of human life, as we know it, of man's thoughts. Humanly speaking, there are no other facts in life. What men think, that they are. Our thoughts are our lives. In them alone we [mortals] live, and move, and have our being. They make all our happiness and all our sorrow. Even in the material world about us there is not one artificial thing, great or small, that is aught but a human thought expressed in one or another material medium. In a phrase, thought is "all there is of it." . . . [Who can say that mind is] the product of certain material machinery—tubular and vesicular neurine and so on—packed within our material bodies, set going by its own inherent power, for the purpose of manufacturing thought and continuing automatically to turn out thought until it is broken or worn out, when it stops and thought ceases? Who can accept such nonsense seriously?

The brain and the nerves are no more mind than the bits of iron and brass and copper that electricians use in their business are electricity. Before the simplest and most primitive electric apparatus was devised by man, electricity was, and if every vestige of electric machinery and all human knowledge of electricity were instantly swept out of existence and memory, electricity would still be. So mind, mentality, thought, whatever you choose to call it, was when there was no such thing as a human brain and will be when there is no longer any such thing as a human brain. Before [mortal] man was and after [mortal] man has ceased to be, Mind IS.

Man habitually lets it [his thought] get in such a condition that he is afraid and ashamed to let any one see it, and shudders at contemplation of the possibility that some invention or discovery may one day uncover it for all the world's inspection, with the clear light of truth illuminating its uttermost corners. Of all that a man hath there is nothing as to which he is so careless as his thoughts. "What difference does it make what a man thinks, so long as he keeps his thoughts to himself?" is the commonest of questions; to which the correct answer is supposed to be, "It makes no difference." The correct answer really is, "It makes all the difference in the world, and no man can keep his thoughts to himself." The least thought that comes into your mind is potent and immortal. It leaves its ineffaceable mark to affect your whole life and the lives of all about you. And yet a man will worry infinitely more about a pin-scratch on his finger than the wound an evil thought inflicts on his mind. Every decent man alive spends more or less time every morning when he arises to make his body presentable before going forth from his chamber to meet his fellow-men. How many of us ever think of making our minds presentable? How often, since the day you were born, have you given your mind a bath, and made its toilet, so cleansing and ornamenting it that you would be proud to let the whole world see it? Suppose you did that every morning, so that you could go forth to your labor and your work with a mind free from all soil of evil, of malice, of hatred, of all uncharitableness, of fear, of greed, of anything that you would be afraid or ashamed to let all the world see. Suppose every one did that, as every one will have to do in A.D. 2405, if the Chronicler's expectations of that period of the world's history are realized. The world would be a very different and far pleasanter place to live in, wouldn't it? Nothing is truer

than that life's aspect for each of us is governed entirely by the individual point of view, that the world is for each of us what we make it with our thoughts, that the measure we mete shall be meted to us again, that what we give out to others we inevitably receive back from them, and evil comes to him who evil thinks and *vice versa*.

[The above article, which appeared in the *Rochester* (N. Y.) *Democrat and Chronicle*, was sent to our Leader in company with the following letter.—ED.]

Rochester, N. Y., July 17, 1905.

Rev. Mary Baker Eddy, Concord, N. H.

Dear Leader and Teacher:—As a token of how the truth you have taught is leavening thought, I think you may be interested in the following "Chroniclings," from the leading paper of western New York. It is from the Sunday issue, and this column is a regular feature. The gentleman who writes it is not a Christian Scientist, and wrote this at the suggestion of a friend, who simply named the topic.

The signs of the times are all encouraging in the work here. With love and loyalty,

Faithfully,

ARTHUR R. VOSBURGH.

Work in Sydney, Australia.

It is with heartfelt gratitude to God, the giver of all good, and also to our Leader, Mrs. Eddy, that we report the growth and activity of every branch of the church work. The attendance at our services has steadily increased, and for some time past our hall has been quite inadequate to accommodate those who desired to come.

Many difficulties were encountered in the endeavor to secure a larger hall for our services, but now we all rejoice that divine Love has met our need in this regard, and a suitable church home has been procured at Royal Chambers, Castlereagh Street, with a seating capacity for two hundred and fifty persons.

Two services are held on Sunday, the average attendance at the combined services for the past few months being one hundred and thirty-eight. Many strangers are present at our testimony meetings, where we hear numerous expressions of deepest love and gratitude to our dear Leader for this wondrous revelation of Truth given in Christian Science, whose message of healing is bringing surcease to the broken-hearted, strength to the weak, and salvation to the sick and sinful. This message of love was first brought to our shores by our text-book, and it has gladdened and transformed many homes in this land of the Southern Cross. We often hear good testimonies of healing through the reading of Science and Health. One was that of a young man saved from a suicide's grave.

Our Sunday School has made very satisfactory progress, the number of children enrolled being forty-three, with an average attendance of thirty-six. Their demonstrations prove what the understanding of Truth has done for them. The superintendent of the Sunday School and the teachers express thankfulness for the latest guidance in this important work given by our Leader. It has awakened renewed interest in feeding "the lambs," giving to these little ones some understanding of our duty to the one Father-Mother God.

Our Central Reading Room is well furnished and conveniently located in the city. Two thousand five hundred and eighteen readers visited the room during the year (apart from purchasers of literature). Many were strangers seeking information on the subject of Christian Science. Becoming acquainted with the Christian Science publications, in this way, they were led to study our Leader's works, and afterwards to attend our services.

Last November an important branch of the church work was inaugurated in providing a committee for the distribution of Christian Science literature throughout the State of

New South Wales. The church members have generously co-operated with the committee, and with satisfactory results. Very many copies of the *Sentinel* and *Journal* have been forwarded to the remote parts of New South Wales.

Fourteen libraries in the inland towns have accepted the literature, and they are now regularly supplied with *Sentinels* and *Journals*. In Sydney the two public libraries and the two daily papers receive the current literature. Copies of Science and Health have also been placed in some of the country and city libraries. The committee is now awaiting permission from other centers to present copies of our Leader's works.

Good results have been reported from the reading of the literature distributed in this way. Apart from the organized method of distribution much has been accomplished by members of our church and friends. The librarian's report shows that during the year 150 copies of Science and Health, 118 copies of other works by our Leader, 2778 *Sentinels*, 469 *Journals*, 566 *Quarterlies* were sold. The entire sales amount to about twelve hundred and thirty-three dollars. The number of *Sentinels* and *Journals* now on order is one hundred per cent and seventy-one per cent more respectively than at this time last year.

It is with interest we hear of the progress of the building of The Mother Church. It was unanimously agreed at the annual meeting to forward to the Treasurer of The Mother Church Building Fund, the collections received on the last Sunday of every alternate month. The Sunday School on hearing of this resolution agreed to do likewise.

We feel we have cause for joy in seeing the steady progress our beloved Cause is making in Australia, whose motto is "Advance Australia." That advancement we know can be best achieved by the spiritual understanding of the Scriptures so perfectly interpreted to us in Science and Health.—CLIFFORD A. NEWMAN, Clerk.

The Lectures.

Auburn, Me.

Before a large audience in Auburn Hall last evening [May 23], Judge Septimus J. Hanna of Colorado Springs delivered an interesting and instructive lecture on Christian Science. J. L. Reade, Clerk of Courts, introduced the speaker, saying in part,—

A faith which in the short space of less than a single generation has sprung into being, and works as mightily in the land as has Christian Science, must have in it much to appeal to mankind as reasonable and true, and it should, therefore, be a privilege for you to hear that faith explained this evening by one of its advocates.—*The Lewiston Sun*.

Decatur, Ill.

A good audience was present at the Opera House, Thursday evening [June 1], to hear Judge Clarence A. Buskirk deliver a lecture on the teachings of Christian Science. The speaker was introduced by Attorney C. A. Ewing, who said in part,—

Christianity is not a new thing, but Christian Science is not only a new thing but an amazing thing. It has grown by leaps and bounds, it has spread like a prairie fire, and those of us not counted among its votaries no longer sneer. If it has not convinced our intellects, it has astonished us with the rapidity of its growth.—*Decatur Review*.

Lectures at Other Places.

Eau Claire, Wis.—Miss Mary Brookins, May 30.
Kirkwood, Ill.—Hon. Clarence A. Buskirk, May 30.
El Dorado, Kan.—Judge William G. Ewing, May 30.
Springfield, Mass.—Judge Septimus J. Hanna, May 30.
Bucyrus, O.—Bicknell Young, May 30.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

"He sent his word, and healed them."

As Jesus was parting from his disciples he said, "And these signs shall follow them that believe: In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover," and it is recorded that "they went forth, and preached every where, the Lord working with them, and confirming the word with signs following." In this Scriptural record there is no hint that some of our Master's followers were to preach the word, while others healed the sick and instructed the people how to conserve their health.

To Jesus and the early Christians there was no separation of the preaching and the healing,—*"He sent his word, and healed them,"*—and the word of God is of equal force to-day, although so many of Christ's professed followers largely fear to put it to the test.

That the churches of to-day are expected to do something for the health of their people as well as for their morals, is becoming more and more apparent, and we doubt their ability to withstand for any great period this growing demand. The following editorial, which we copy from the *Baltimore Herald*, gives proof of the urgency of this demand as well as of the admitted inadequacy of the generally accepted interpretation of Jesus' teachings,—if the "signs following" are an essential part of Christianity. The *Herald* says:—

"If the proposal of the Maryland Association for the Prevention and Relief of Tuberculosis finds favor with the ministers of this city and the State, a novel campaign against the dreaded 'white death' will be begun in the fall. The pastors of churches have been solicited to open their pulpits to physicians deputed by the association to set forth to the congregations the causes, character, and the method of combating tuberculosis.

"It seems that in Montreal a Sunday was set aside for the presenting of this theme, and a widespread and active interest was engendered in the war in progress against civilized man's worst foe. There is no reason in the nature of the case why the pulpit should not be opened to the discussion of a subject of broadest humanity by the only class of persons who are competent to state the facts and to evoke inspiration in what has come to be a general crusade.

"As the pastor of a Baltimore church pointed out in an article in a religious paper—which has become the basis of the present appeal by the Maryland Association—clergymen are called upon constantly to visit homes and to administer consolation to families afflicted by the entrance of the dread disease. Why should they not then be glad to have that theme discussed in their pulpits in the interest of the lessening of the plague? Religion has to do with spirits corporate, and to-day there is little disposition to limit its ministrations to the strictly spiritual sphere.

"It is likely that the Baltimore pastors will take this view of the matter and the campaign of education proposed be carried out."

ARCHIBALD McLELLAN.

Individual Adequacy.

THE high tides of humanity which surge together upon all possible occasions, evidence the strength and universality of that social or gregarious instinct, the phenomena of which have not infrequently authorized the command, "Go not with the multitude to do evil." The dominion of this impulse is so general, and we are so accustomed to its manifestations, that the exhibition of a disposition to be alone, or to act without reference to prevailing ideas, is likely to awaken surprise if it does not beget a reputation for queerness. And yet all men recognize, in some degree, the inherent grandeur and nobility of a nature which is marked by intelligent conviction, and which, if need be, can stand alone, and firmly, for that conviction,—a well-poised selfhood that does not need the support of conventional thought; that can be content and even happy though without companionship save that of Truth; that is willing to suffer "the loss of all things," as the great apostle puts it, to win Christ.

From any point of view the picture of Daniel alone amid the lions, and in command, is deeply impressive; but we miss its chief significance if we do not read, in his calm supremacy over bestial fierceness, the story of conquest over mortal sense and self by an incorruptible knight of Truth. In the day when enemies were plotting and friends were counseling "discretion," he had "come out from among them" all and been "separate;" he had chosen to stand alone with God and solve his individual problem, and in the hour of trial he found that in so doing he had solved all problems; the harmlessness of every beast of error, in the presence of Truth, was demonstrated. The lions were no less lions, but there was no longer the scent of flesh about him, nothing that answered to their hunger. In his ascent to an exalted plane of spiritual consciousness and determination, he had left the things that feed animality behind.

Though Daniel's experience was in many ways unique, the test he so grandly met is one which all are called upon to undergo, and the days are few in which the spiritually aspiring are not required to be indifferent to some edict of custom, some generally accepted belief, long indulged habit, or presuming personality. Sooner or later each must learn for himself that the only place of safety is found when he is alone with God; in the stress and fury of temptation's tide the arm of none other can save. In writing the Galatians, Paul exhorts them to stand fast in the liberty wherunto they were called, the liberty of being a man for one's self, no longer dominated by circumstance, impulse, educational bias, or personal influence, but free, even as a Son of God. He enumerates the many and blessed fruits of this individual loyalty to Truth, and then adds, "Against such there is no law;" i.e., no lions for Daniel, nor for us!

Until we have acquired this independence of spiritual selfhood we are subject to the intrusion of doubt, false belief, and fear, and to escape their pains we turn with thankfulness to our brother for help. This is well, we could not do otherwise under the circumstances, but every Christian Scientist must realize that in so far as it becomes habitual, in so far as it delays the earnest individual endeavor to find for ourselves and for those committed to our care a healing and saving sufficiency through our own consciousness of Truth, in so far as our spiritual growth is hindered thereby. In coming to Christian Science some may be tempted to replace their past dependence upon physicians with a kindred dependence upon the personality of the practitioner. Instead of asserting their rightful inheritance and bravely trying to utilize their privilege and power in Christ, they fall into a state of chronic timidity and weakness which means enslavement when there should be freedom, retreat when there should be advance, defeat when there should be victory. In keeping with Paul's classification of gifts, we may recognize a special fitness in each for a special work; but the working out of the individual salvation in the over-

coming of sickness and sin, cannot be relegated to another. "Work out your own salvation," said the apostle, despite your fear and trembling. Manifestly God could not consent to an unideal thought or attitude in His least child, and this divine insistency, which through the faultiness of human sense has so often been denominated His "jealousy," demands that each, for himself, shall know God, Truth, as the ever-present and all-sufficient help,—the only Saviour.

We are counseled to be helpful to one another in love, but to be independent in faith and understanding; to find pleasure in every wholesome brotherly association, but to preserve our integrity, maintain our ground, and retain our peace quite regardless of others,—in a word, to be self-centered in Christ.

The gregariousness of the many means simply that the mental poverty of the individual is intolerable even to his own self-conceit. Of Thoreau, Mr. Mabie has said that "he could endure his own society indefinitely, which is rare among men bred, as most men are, to be interested rather than interesting." Manifestly it is impossible for one who is a stranger to noble thoughts and unworthy of self-respect, to find contentment in his own companionship; but he who is unselfish, who is hospitable to great ideas, and who leans upon his God,—he can never feel dependent upon others, however much he may prize their friendship and good will. He is in touch with a source of strength and inspiration infinitely higher and more satisfying than the human.

It was the offence of Christ Jesus that he made himself "equal with God." He brought to humanity the vision of the true man,—a divine idea, perfect as the Father,—and in the inspiration of this exalted sense Paul gave us the ideal pose of thought for every hour and exigency, when he said, "I can do all things through Christ which strengtheneth me."

JOHN B. WILLIS.

"Redeeming the time."

ST. PAUL's counsel to the Ephesians, that they redeem the time because the days were evil, should be pondered by all. To redeem our time, is to make the best use of it, and it may well be asked how many there are who fulfil this seemingly simple obligation, an obligation which assuredly rests upon all alike. It is not necessary to do more than point to the unnumbered instances in which men with no other capital than their time have acquired great learning and wealth; in a few short years they have gained all the earthly possessions which others have inherited from generations of toiling and hoarding ancestors. Although this is well known, we yet hear it said, so frequently as to occasion no surprise, "I have not the means to do this or that," and perhaps even more frequently it is remarked, "I have no time."

It is manifest that those who have acquired for themselves wealth or learning must have appreciated the incalculable value of time. It is also clear that they must have been animated by a definite purpose which they kept steadily in view. Whether or not the acquisition of wealth and fame is deemed a satisfying guerdon for a life's labor, is not the present question. The point is this; viz., any earthly good may be gained by those who devote their time and energies to its pursuit, a proposition no longer problematical.

In Christian Science we learn that there is, in reality, but one good; namely, spiritual being. This is no mere theory to those who grasp its profound meaning, it is a demonstrable truth which is sustained by the proof of a changed consciousness, a consciousness that soon works out a corresponding change in conditions. It replaces disease and discord with health and harmony, and is the secret of success, expressed in the Master's words, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." His rule has no place for the divisions of covetousness nor for the subtractions of dishonesty. In its unqualified declaration that all good things will be

"added unto" those who seek "first" the things of Spirit, God, this rule is final authority. In spite, however, of its lavish provision for man's need, we find those who continually defraud themselves with the delusion that they have little or no time for spiritual things. Procrastination has very properly been called the thief of time, and a subtle thief it is, for under its evil influence mortals come to believe that it is not necessary to seek the kingdom of God first, and they soon find themselves confused and impoverished even with relation to their earthly affairs. If spiritual reality be first in importance,—and Christian Scientists know that it is,—it must also be first in point of time. Time is but wasted when any duty is undertaken without a clear sense of the demands of divine intelligence, the source alike of strength and of swiftness, of energy and of endurance, the endurance that sustains thought to the end of every problem.

To give our first and best service to God does not mean that duties imposed by present conditions should be neglected. On the contrary, we can best prove our fidelity to Truth by the faithful and intelligent performance of every legitimate task. If thought goes first to God in everything we attempt, a wonderful illumination results. No time will be wasted in wrong thinking when we commune with Divine intelligence, and all work thus undertaken bears the hallmark of excellence, and promises yet greater attainments.

With the true sense of time and service the days no longer seem "evil," but good, and each affords an opportunity to acquaint ourselves with the divine Mind and be at peace, while "redeeming the time" from profitless endeavor, and learning, with the wise man, that "the blessing of the Lord, it maketh rich, and he addeth no sorrow with it."

ANNIE M. KNOTT.

Letters to our Leader.

Sydney, N. S. W., May 24, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H., U. S. America.

Dear Leader and Guide:—The members of First Church of Christ, Scientist, of this city, assembled, desire, from overflowing hearts, to express their loving gratitude to you, the Discoverer and Founder of Christian Science, for the understanding of Truth which has flowed into the lives of all through the study of your inspired book, "Science and Health with Key to the Scriptures." We do not wish to intrude on your time, but believe that it will interest you to hear from the far East that we are reaping many blessings and benefits, both physical and spiritual, and we know that they are the result of the revelation to each hungry heart that divine Love, the only power, is present here and everywhere.

Our little church is growing in spiritual understanding and adding to its numbers. At the Wednesday evening testimony meetings your name is constantly mentioned with deep reverence and gratitude for all your unselfish labors of love on behalf of the world. The Christian Science textbook is frequently referred to as the Key which has opened the Scriptures to many who had laid the Bible aside as incomprehensible, and its truth is thus bringing immortality to light. We have amongst us instances of the healing of so-called incurable maladies through the reading of your book alone.

We know that the best thanks we can express is by living purely, healing the sick, and maintaining harmony in our church, that the world may see our good works and glorify our Father which is in heaven.

With gratitude and love on behalf of the Church,

CHARLES H. GIBBS, *First Reader*.

E. FLORENCE BURKITT, *Second Reader*.

Erie, Pa., July 10, 1905.

Dear Mrs. Eddy:—Ever since last May, when I was one of those chosen to receive instruction in the Massachusetts

Metaphysical College, I have wished to express to you my gratitude for that priceless privilege, and to assure you of my appreciation of a teacher so lovingly loyal and so impersonal in his reflection of Truth that it often seemed as if our beloved Leader herself were speaking to us. That sacred season passed within the quiet walls of the building which witnessed "the dawn of Christian Science,"—to quote your loving message to our class,—and in close touch with the stately growth of that noble structure which will proclaim to a waiting and waking world its approaching "meridian," brought to me that for which I had long sought and prayed—a deeper sense of that divine Love which is "the heart and Soul of Christian Science" (Science and Health, p. 113).

Our midsummer communion Sunday was a day of rejoicing, gratitude, and consecration. It was our last Sunday service in our present meeting-place,—a hall which is in many ways undesirable for our services. We have made arrangements with the First Unitarian society to use their recently built church on West Ninth Street, and will hold Sunday afternoon services there. Our reading room is to be moved to a more accessible and central location in the Penn Building. All feel that this is a step onward and upward. The attitude of the Unitarians in this affair is exceedingly cordial and generous. Although this move places us under the necessity of paying two rentals for the time being, until we secure a tenant for the vacated hall, yet our members, knowing that the Love that showed the way will provide for each step therein, not only cheerfully faced this situation but unanimously voted that the first collection taken in our new church home, and one each month thereafter, should be devoted to The Mother Church Building Fund, so long as contributions are needed for that purpose. We had already sent our own building fund, to be added to that of The Mother Church. The addition of new names yesterday increased our membership twenty per cent and the Sunday School shows an increase of one hundred per cent for the year.

Of course I can count, as the result of my demonstration, only a small fraction of these fruits, and I know that my work will be blessed only in so far as I am loyal and faithful to you and to your message,—as I take to heart and follow your admonition to our class, "Watch, pray, demonstrate."

Lovingly yours,

CLINTON B. BURGESS.

Salamanca, N. Y., April 21, 1905.

Rev. Mary Baker Eddy, Concord, N. H.

Dear Leader:—I am impelled through a falling tear to express a gratitude which daily grows fuller and richer, until I exclaim with the Psalmist, "Bless the Lord, O my soul: and all that is within me, bless his holy name." Through your inspired writings I have been lifted from the depths of despair, from a consumptive's grave, and from mental darkness into perfect health, strength, and joy, even to the borders of heaven. The very least I can do is to lay my all upon the altar of Christian Science, and daily follow Christ Jesus, whom your life so beautifully exemplifies, as your writings so clearly indicate. I am but one of an increasing multitude, who, redeemed through the merits of Christ, Truth, to-day rise up to call thee blessed.

Lovingly your student's student,

W. WILLARD ROOKS.

Disease is but
A glimmering wraith,
No matter what
Grim error saith
In blatant tone;
And thou shalt know the power of faith
And Love alone.

ANON.

Testimonies of Healing.

On Friday, July 8, a year ago, my son, nine years of age, was accidentally thrown from a heavy wagon on an asphalt paved street, and falling between the wagon box and wheel his body caught in the rear wheel and was carried around twice; the third time he caught hold of the axle and thought, "God will take care of me," and then "went to sleep." When he recovered consciousness his mother had arrived, and he said to her, "Mamma, I am not going to be a cripple." He had a slight understanding of Christian Science and used what he had. In addition to receiving severe bruises on body and limbs, the rear wheel of the wagon passed twice over his right leg between the ankle and knee, causing what the surgeons called a compound fracture. The bones of the limb were crushed the width of the wagon tire, and the bones below where the wheel passed over had burst through the flesh so that they were exposed. Three surgeons assisted in reducing the fracture. They said it was the worst case of the kind they ever attempted to adjust, and they were very doubtful of saving the limb. The accident occurred about noon. When I arrived home in the evening, my son had come out from under the influence of the anæsthetic and was suffering intense pain. I at once telephoned the surgeon and stated his condition, and was given the comforting information that we could expect this condition to continue for at least a week or ten days, and that the only way to allay the pain was to administer morphine tablets, which he had left for this purpose. We kept the child under this influence Friday night. Saturday morning my wife and I talked the matter over. Knowing the condition of the patient, that he could not stand the severe pain, and not wishing him kept under the influence of morphine, we decided to ask for Christian Science treatment, feeling that this was our only hope. I telephoned at once to a practitioner and explained the situation as best I could, asking her to take the case, which she kindly consented to do. In the afternoon, when she called at our home, we found a rather difficult proposition before us, as we wanted assistance from both Christian Science and *materia medica*. This obstacle was removed through the mutual understanding that the only work of the surgeon was to keep the bandages properly adjusted, and that no medicines were to be given. When this was first explained to the surgeon he demurred, as he was afraid the severe shock which the child's system had received would result in bringing on a high fever, and that other complications would set in. He, however, finally consented to our wishes. Sunday morning when he called, he took the temperature, and admitted that he was surprised to find it only one degree above normal,—practically no fever.

I then had a talk with him as to his opinion of the case and its results, and was told that the matter of saving the limb all depended on establishing circulation through the crushed portion of the limb and foot. If this could not be done, the portion of the limb below the injury would die and amputation would be necessary, and in his opinion this would be the result. We advised the practitioner of this situation, and inside of twenty-four hours perfect circulation had been restored, greatly to the surprise of the surgeon. Another surprise was, that in just two weeks from the time of the accident, when the surgeons were adjusting the bandages, it was found that there was no discoloration in the injured portion of the limb, the natural color of the flesh being restored, while a small bruise on the arm was still quite visible. When we dismissed the surgeons about the first of August, we were advised not to allow the boy to attempt to walk before the latter part of December, and then only by having the injured portion well protected with bandages. He walked, however, in the latter part of September without any assistance whatever, the limb being perfect, as was its action.

Many obstacles had to be met and overcome by the prac-

itioner, in treating the case,—such as my wife and I, our trust being about equally divided between Christian Science and *materia medica*. Another, was the surgeon's opinion that there would be trouble in the action of the knee and ankle joints. This also was met and overcome by Truth. When the child was first allowed the use of the knee joint, the action was perfect and painless, as was also that of the ankle when he was allowed to use the foot. From the time Christian Science treatment began, his health was perfect and he did not suffer over an hour's pain altogether.

After such a proof of God's power, and the great blessing which Christian Science has brought to us, we can but feel grateful to Mrs. Eddy, whose pure and unselfish life God has seen fit to honor, in bringing to us her wonderful book, "Science and Health with Key to the Scriptures."

JAMES W. MINNICH, Toledo, O.

I owe every moment of my life for the last two years to God and His truth as revealed in Christian Science. Only those who have experienced the awfulness of facing death can appreciate with what gratitude I can say this. I was rescued from what seemed to me then to be death's portals closing about me, caused by hemorrhages after premature birth. I was alone in the house and not able to call any one; when my husband did come he called a physician as quickly as he could. I had been feeling ill through the day and had sent word to a practitioner, who received my letter about the same time that the physician arrived. I heard the physician calling my husband and saying he was afraid I would not "pull through." This roused me from a sort of stupor,—my heart went out in prayer to God for help through Christian Science, and I declared with all the strength I had: God is my Life. This statement of the truth, together with the faithful work done by the practitioner, so completely changed the conditions that I felt quite strong within half an hour, and the doctor left, stating that everything was right. The loss of blood was so great from the hemorrhages that I looked like a corpse and could not get warm. Notwithstanding all this, the word of Truth was all-powerful. The third day I was up about the house all day, doing the work, and within a week was as strong as I ever was and a picture of health. I have never suffered from any of the ill effects that are common in such cases.

The spiritual awakening at this time was so great that material things appeared in their native nothingness. It was surely a realization of the kingdom of heaven within (consciousness), and I have been a different woman ever since, as those of my immediate household could testify. God has indeed bound the stubborn will, and in great measure roused me from the stupid rest of materiality. I used to say that, even if I could, I would not practise Christian Science healing. Now I can say that the voicing of the truth for others brings to me the greatest joy I have ever known.

I could no longer honestly remain a member in my former church, as it denied the power of Christ, Truth, to heal in the present day, of which I have had such powerful proof. To break my former church connections was to me the greatest cross, but I knew that I ought to take my stand and acknowledge Truth, and I felt sure that if I would grow in understanding I must obey. One dark hour when I felt that I could not stand the seeming shame and persecution, I prayed to God for help to do what was right, and the burden was lifted. Since that blessed hour, I have never doubted, or felt like turning back, for I know that divine Love has directed me, and will guide me in this straight and narrow way. Being the first to bring Christian Science into this community, we were persecuted; but those days were the happiest I have known, proving the truth of the Scripture, "Blessed are ye, when men shall revile you, and persecute you . . . for my sake."

It was to tell of a demonstration of the power of Truth at the time of the birth of our baby daughter that I first

began this testimony, and I hope it may help to dispel the darkness for some dear sister who is held in the bondage of fear. Our baby was born without pain. Every law of *materia medica* was rendered powerless by the law of God. Two sister Scientists were with me, and I received absent treatment. Several hours before the birth were spent in reading the Bible, and in repeating passages from Science and Health. It was a glorious spiritual feast, and we felt God's presence with us. I was just as strong after the baby was born as I was before. I waited on myself and the child from the first; did whatever was necessary for me to do, and after the second day did my regular work, which was easy for me to do, as I felt strong and well.

I long to voice a little of the love and gratitude I feel for our beloved Leader. When I think of the great good she has done, my heart is flooded with a love that cannot be expressed.—MRS. CATHARINE JOHNS, Cotter, Ia.

Fifteen or sixteen years ago, when "other helpers" failed, the "Help of the helpless" came to "abide" with me through Christian Science. I was led to a Christian Scientist of Indianapolis to ask for help, and was lifted above the desire for material aid. After the first prayer of the Scientist I went home and threw away my last bottle of medicine, which a short time before had been purchased with my last penny. Need I state that I did not and could not find peace and rest in the way that I was looking for it, but he that seeketh in Truth's way findeth. After three weeks' visits to the Scientist, I was much benefited, and after thorough and careful study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, my desire was to help others.

Before having class instruction I had a great desire to have a copy of Science and Health of my own. Not having the money to purchase one, I gathered together what had once seemed a treasure to me,—a small library,—with my school books. I took them to a second-hand book store, and received for them just enough to get a copy of Science and Health. I think I had not read it through when I found I was no longer in bondage to a severe pain in my back, which, with many other ailments, had troubled me much. Thus I was led to know, first through suffering, then through the teaching and practice of Christian Science, that in Spirit, not in matter, is our help.

Shall we ever cease to give thanks to God, or cease to love and follow the one whom He has chosen to lead us from sense to Soul?—NANNIE B. JAYNES, La Fayette, Ind.

Words can never express the deep gratitude I feel to God, and to our dear Leader, Mrs. Eddy, for her self-sacrifice for the world. I was healed of the worst form of sick-headache, with which I had suffered from childhood, and many other ailments. The greatest of all the blessings which Christian Science has brought to me is that it has led me to my heavenly Father, and has given me implicit trust in His loving care. It has made the Bible very dear to me, and my earnest prayer is that I may live closer each day to the teachings of the Bible as it is interpreted in Science and Health.

MRS. ANGELINE E. COLBY, Charlestown, Mass.

Some time ago I was confronted with the fear that failure in my work was imminent. I had worked faithfully, but error tried hard to discourage me. For a day I strove earnestly to realize the allness of God and my relationship to Him, and finally the light came, with such a sense of the omnipresence and omnipotence of Love that all fear and discouragement left me, and I knew that all was right, even before mortal sense seemed to acknowledge any change. The demonstration was complete. In place of failure there was success.

To our Leader, who has given us an understanding of the truth which delivers us, and who has patiently pointed the way over many a rough place, my gratitude grows each day.—PHILIP S. BARTO, Champaign, Ill.

One of my chief causes for gratitude to Christian Science is the help it gives in training my children. When the first little daughter came, twelve years ago, ours was a "house divided against itself," and my husband's passive indifference to Christian Science was turned into active opposition when we were called to decide as to the welfare of our little one. My own understanding was so slight and my fears were so great, that only because Christian Science was the truth, and I had acknowledged it as such, were we carried safely through those early years of trial, both physical and mental. Divine Love triumphed in every instance, and when, two years later, another little daughter came to us, I had almost no opposition or fear to meet from my husband. Three years after that, our third and last daughter was welcomed into an atmosphere of perfect trust in the power of divine Principle, which had been so thoroughly tested and proved to be unfailing in its application to every human need, that no parental fear could hold out against it.

At first, I unconsciously expected that my children were not going to manifest any of the weaknesses or faults common to childhood, and great was my dismay and self-condemnation, when our eldest displayed strong human traits, so new to me that I found it hard to handle them. The second child came to us with the seeming heritage of a "delicate constitution," handed down from mother to child, and many a conflict did we have with different forms of sickness during the first years of her human existence, but gradually the manifestations of weakness have passed away, and to-day she is healthy and free. The third child came to us after we had been disciplined, tried, and purified in a measure by these earlier experiences, and she has been always like a ray of sunshine and the embodiment of harmony and love. At times my sense of personal responsibility has seemed so great that I almost sank under the burden, but we are taught that such a condition of thought is itself error, and that the divine strength is made perfect in our weakness. More and more do I learn that the traits we have considered strong and fine, humanly, have to be purified and brought under divine guidance, or else they fail us; while the qualities which we seem to lack, through that very sense of human insufficiency, make us turn to divine Love for strength; and these weaknesses are replaced by the stronger traits because we are so conscious that we cannot of ourselves accomplish the work,—we must reflect divine wisdom, strength, and understanding, else we fail. So it is with these children, and when I see faults or failings I can only point out the line of action for them to take, guide and aid them in every way, be thankful that I can leave them to God's care, and trust in His precious promises for them and all mankind.

LULU Y. GAZZAM, Crystal Springs, Wash.

It has been more than three years since Christian Science brought me from the depths of suffering and despair into the joy of life. At the time of my healing I was living in Houston, Texas, next door to Second Church of Christ, Scientist, and several times attended service there. I was a great sufferer at the time from asthma and chronic stomach trouble, which made life a burden to me. I did not want to live any longer and yet was afraid to die. I was without hope, here or hereafter. Both of my physicians told me in one day that they could do nothing more for me, having tried all known remedies for the disease, and none having helped me, but that a complete change of climate might bring relief. They could not, however, be sure of even this. I had insisted upon having their honest opinion of my case, for I had spent all I had for two years on doctors and drugs. I grew steadily worse and had come to have the habit of taking morphine as a last resort when the attacks came on. My physicians were fine men, standing high in their profession, and were personal friends. They had been so kind to me always, but I felt convinced there was no hope for me in medicine.

Just after this, and while ill, a friend came to see me and said, "Why not try Christian Science? Mrs. ——— had asthma ten years and say she has been cured by it." After she had gone the words kept coming back to me and when I was able to be up I went to see a practitioner. Of all the beautiful days which stand out in my life to be remembered with joy and thanksgiving, that day comes first. The dear Scientist listened to my story, then said that all things are possible to God. She gave me a treatment, and I retired at the usual time,—propped up in bed with chairs and pillows, for it had been many months since I could breathe when lying down. The next thing I knew I was awakened by the sun shining in my face, after a whole night's rest, a thing which had not happened to me in years, and I was amazed by it. I sprang out of bed, exclaiming, "What has happened?" My sister answered, "Why you have slept all night." She had been up with me so much that she was as surprised as I was.

In a few weeks my healing was complete, and from that day to this, more than three years, I have never had asthma, though I have been in all kinds of climate. Many struggles and temptations have come into my life, meanwhile, but I go on my way rejoicing in the power and glory of God, helping others, and knowing that all good things come to those who patiently wait on God. There is only one other Christian Scientist in our town, so we read together and help each other, knowing that others will come and we shall have a church in time.

A short while ago, I was in bed, seemingly quite sick. My friend came and read to me, as the pain in my head was so great I could not read for myself. After one hour all the pain left my body and I had perfect rest. Next day when she came to see me I was cleaning house.

Oh, what a blessed knowledge,—that God's power is for all His children. A just and deep gratitude goes out to that noble woman, Mrs. Eddy, who has brought to so many the light of Truth, here and now.

KATE A. BAUM, Bradentown, Fla.

I am thankful that through Christian Science I have gained a fuller knowledge of God. I thank God that He answered the prayer of my dear sister, the desire which she most faithfully and trustingly held for so many years, that the shackles of iniquity might be broken, which bound me to a belief in sin, sickness, and death. I thank Him that I have been enabled to know the omnipotence of divine Mind, through the healing of sickness as well as sin. I thank Him for lifting me out of the desolation of aloneness and raising up for me friends whose pure affection is based upon the understanding of Truth and Love. I thank Him that, to me, the land which was desolate has become as the garden of Eden. I am thankful that I am being gently led step by step into the great white light of Truth, and that some of my friends follow where Love leadeth me.

Those who are longing to bring dear ones into Christian Science, should never grow weary in this well-doing, for in due time they will reap their reward. For ten years my sister prayed for me, and four years ago she offered me Christian Science, but it was like casting pearls before swine, for it was rejected scornfully, and I went my way thinking that I had put its teaching behind me; but it was not behind me, it was right with me, and was loosening, one by one, the shackles of iniquity which bound me to the belief that I was an infidel simply because I could no longer accept the false concept of God which had been given me in my youth, and I knew no other; the belief that poor, frail, fleeting human love was my staff of support and happiness, and that I was subject to the supposed laws of *materia medica*, that I must have an operation for a second attack of appendicitis, which was healed in two treatments in Christian Science without the loss of a day's work. Now I know that I am healed indeed, because God does His work well and thoroughly. I have also been healed of many

minor ailments, but to me, the greatest blessing is the spiritual healing, the absolute restfulness in the everlasting arms of divine Love, the understanding of Holy Writ, and the trust we can safely place in God. If I love much it is because much is forgiven me, and I ask of Him that my utmost devotion may be "a burnt offering" upon the altar of Truth and Love. I thank divine Mind that one of His children in this age was endowed with that purity of thought, that unselfed love, which enabled her to give to her brethren this beautiful truth, taught in "Science and Health with Key to the Scriptures," and I breathe a fervent, God bless our beloved Leader.—ELIZABETH E. SOUZA, New York, N. Y.

I feel it is my duty to give my testimony, as it may help those who wish to know the truth. I was suffering unspeakable agony with neuralgia in my head, and pleurisy; indeed I was a total wreck, given up by a council of doctors,—left to recover, or remain an invalid. After nearly three months of suffering, Christian Science healed me, and there are no words to express my happiness in God's love. It is indeed most wonderful how divine Love snatches us from the grave, and sets us firm on the Rock, Christ. I wish to say to all that Christian Science has healed me and will heal you, if you will accept it.

MRS. WILLIAM PARDY, Plattsburg, N. Y.

Christian Science came to our home when I was very young, through the healing of a member of the family, but although this was the greatest blessing to our home and I myself received much-needed help, I did not realize until some years later the necessity of doing this work for myself. Finally, problems came into my life which I knew could be solved only through Christian Science, and I am thankful to say that at last I was persuaded to work, for without this earnest, daily striving to understand Truth, I would not have known the great mental and physical freedom that has come to me. All my health and happiness is due to Christian Science. As a child, I was constantly being taken out of school on account of ill-health, and although a college education was a cherished ambition, for some years the possibility of its acquirement looked very doubtful, until this blessed truth came and cleared away the seeming obstacles. My four years in college were filled with harmony and happiness.

I wish especially to acknowledge the great help received from our periodicals. The remarkable life of our beloved Leader fills me with constantly increasing wonder and gratitude, as I daily study and try to live the truth she teaches.—ALTA D. MILLER, Evanston, Ill.

As I look back over the past six or eight years in Christian Science, and then go back in thought over my worldly way prior to that time, there is a difference that I cannot describe. I recall the material belief that one gets pleasure and enjoyment from innumerable sources, and I will say that I tried nearly all of them but failed to get the pleasure I was looking for. I did, however, get my share of the misery and discomfort, and I am thankful to-day that I had this experience, for it led me to accept the truth, as given to us in Science and Health by our dear Leader, Mrs. Eddy. It was indeed the key for me, because it unlocked the mystery that seemed to be about the Bible, and I learned what God is, and that there is no power but God. How true are Isaiah's words, "I will bring the blind by a way that they knew not. . . . I will make darkness light before them." Truth has done all this for me, and is still doing it. It would be impossible for me to tell of all the benefits I have received, but I will mention a few for which I am deeply grateful. I was in bondage to the liquor habit, and had taken a celebrated cure for it. I did not indulge for nearly two years; but I drifted back, and the last stage was worse than the first, as is so often the case under drug treatment.

I was lifted out of this so completely that one would not know to-day that I had ever used intoxicants. I had also been a constant user of tobacco for more than fifteen years, both chewing and smoking. The habit was overcome in a most satisfactory way. I had a stomach difficulty for several years that gave me considerable trouble at times. I had tried everything I could hear of, but received no lasting benefit, and continued to grow worse, until Truth healed me.

Last winter I had an experience in the way of healing that was remarkable, and can only be known by myself and by those who were present. The case was in the nature of a fall from the hay mow to the floor, down a flight of stairs. I got up and did some work, then went to the house, realizing the truth for myself as best I could, all the time; but I seemed to need help, as I was in a distressing condition, both mentally and physically, and vomited blood quite freely. At this point a practitioner was called, and also my mother, who is a Christian Scientist. This is all I knew of myself until I awoke out of the dream, some two or three days later. I awoke as comfortable as if I had just had a nap; everything was clear and peaceful. I was healed! These are only a few of the many cases of healing experienced by myself and in our family, but I feel that I should not take up the space with a more lengthy testimony.

As I said, when I look back over the past eight years, and think of the trouble I have been freed from, it makes me more than happy; and it is comforting to know that I may go on and be freed from all that is unlike God, and become more loving, more brotherly, be more faithful, and attain to that Mind that was in Christ Jesus.

I am thankful to God, and to Mrs. Eddy, that one was so pure as to be able to lead this multitude out of bondage into the light of Life and liberty. I am also very thankful for the *Sentinel* and *Journal*, which bring us a feast of good things.—GEORGE B. PATTERSON, Watertown, S. D.

For a long time I have felt that I must tell of my healing in Christian Science. About seven years ago I was a total wreck. I had been sickly all my life and had many diseases, and some of the best doctors in our city claimed that I could never be cured, as I was failing fast with consumption. My sister persuaded me to try Christian Science, and I went to see a practitioner. After I had told her how afraid I was, she gave me a treatment, and I went home feeling very happy, as the fear of death was gone. When I reached home I tried to tell my sister how happy I was, and that night I asked her if she had noticed that I did not begin to cough at the usual hour. I went to bed and slept well all night, and found that I had been healed in that one treatment, for one by one all the symptoms left from that time. I then weighed eighty pounds and now I weigh a hundred and twenty-five pounds. I am a member of The Mother Church, and am to-day a well woman; all my diseases have disappeared and the truth has made me free. I hope always to prove worthy to be called a Christian Scientist. I am thankful to God, and to Mrs. Eddy. I study our Lesson-Sermon every day and love to read the *Sentinel* and *Journal*.

MRS. HULDAH M. HILL, Toledo, O.

Why is it every "prophet" who has been inspired by the sun spots to speak his mind tells us that something ominous is indicated by their presence? Once in a while it seems we might have a prophet to foretell cheerful things; some one to prophesy that there is to be peace and harmony and happiness all over the world, and that prosperity will wait on every man. Perhaps such prophecies would not come true; but the other sort always fail to materialize, too, if you have noticed. So if we are to be fed on idle forecastings at all, why not demand that they shall be of the pleasant kind?—*Boston Transcript*.

From our Exchanges.

It is clear that no stage of evolution, as we are able to conceive of it, presents itself as perfect. Our intuitions outrun all material concepts; and, precisely as we have been obliged, in tracing matter back to its least specialized form, to posit an ultimate power whose creation must be perfect, so, however much we specialize matter, we have simply a more complex, material organism, imperfect, mortal, and clearly lacking in that perfection which we have been obliged to posit of self-existent omnipotence.

We are therefore forced to the conclusion that any manifestation of this self-existent, ultimate power "was in the beginning, is now, and ever shall be" perfect, and, since the ultimate self-existent power could have been called into being by no power other than its own, we are obliged to conceive of it as eternally self-existent. Since, too, this power is eternally perfect, all its attributes as well must have existed eternally in all their perfection. Hence, to posit the creative attribute on the part of this power is to posit that attribute from all eternity.

Put briefly, and in the usual phraseology, whatever God does at all He must do from all eternity to all eternity; and all that He does is perfect.

Since all our material concepts of the true universe—God's universe—are confessedly imperfect, they must be, to the extent of that imperfection, false, and, because false, unreal.

Our knowledge of that universe in all its eternal, spiritual reality must come to us through the revelation of that perfection which abides from everlasting to everlasting,—the eternal manifestation from the eternal God.

ARTHUR CHAMBERLAIN.
The Christian Register.

The following news item has recently appeared: "The Pawtucket Congregational Church, of which Rev. Frank J. Goodwin is pastor, besides making changes in the form for receiving members, has eliminated from its articles of faith a statement of belief in eternal punishment. 'We believe in the resurrection and the life everlasting' is the article substituted for one which read, 'We believe in the resurrection, and in a general judgment, when a final separation will be made between the righteous and the wicked, the former to enter into everlasting life, and the latter to go away into everlasting punishment.' Only three dissenting votes were cast against the change, although the congregation is one of the largest in the city." The remarkable thing about it is that it is not remarkable! It appears as a news item simply, and hardly makes a stir in the religious world. A quarter of a century ago it would have shaken the Church to its foundations, now it is only an incident in the onward sweep of the current of liberalizing of creeds.—*The Universalist Leader.*

There is a oneness of spirit and a unity of purpose in being loyal to Jesus,—in his love for man, in his devotion to the Father, in his unselfish readiness to suffer for the people. All these are qualities of character, and should appeal to our very best selves, and tend toward the development of the highest qualities of character. When we love God with all our hearts, and love our neighbor as ourselves, we shall be one essentially, and this is of immeasurably more importance than that we should be one organically.

Pacific Christian Advocate.

Men are learning to put less dependence on the forms of theological thought, which must change from generation to generation, and more dependence on the fundamental needs of our moral nature, the enduring distinction between right and wrong, the imperishable marble of character.

JENKIN LLOYD JONES.
The Outlook.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem. Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

National.

Secretary Taft and party met an extraordinarily enthusiastic reception in Japan. The tone of the press is unprecedented in its warmth of friendliness. Tokio was en fete, the whole city be-flagged and illuminated. Such a welcome, it is said, has never been accorded to foreign visitors. The Mikado, assisted by the Crown Princess, received the party in audience and after presentations repaired to the banquet hall. A garden party followed the luncheon. The Emperor ordered his private park opened, and the Americans were driven through the grounds. The park was completed three hundred years ago and no foreigners were ever before admitted to it.

James W. Davidson of Minnesota has been re-appointed consul to Antung. This seems to indicate that the President and Secretary Root mean to adhere closely to the policy of the late Secretary Hay, of never considering Manchuria as anything but Chinese territory. Mr. Davidson was first appointed on January 22, 1904. On account of the military operations in Manchuria, Mr. Davidson could not get to his post. Finally, Mr. Davidson was temporarily made vice consul at Shanghai.

The United States National Museum is about to receive a large collection of South American moths, the gift of William Schaus of Twickenham, England, and New York. This is one of the finest collections from this region extant, containing some sixty thousand specimens and hundreds of types, mostly the result of Mr. Schaus' personal collecting.

Foreign.

The special committee appointed by the Riksdag to deal with the crisis which created the revolution in Norway, has delivered its report. The committee declares unanimously that the Government bill cannot be adopted in the form in which it was presented to the Riksdag, and proposes that the Riksdag shall signify its willingness to negotiate with Norway for a dissolution of the union if the

newly elected Storting requests a repeal of the act of union and a dissolution of the union, or if such request is received from Norway after the Norwegian people by a plebiscite have declared in favor of a dissolution of the union.

The Norwegian Government has proposed to the Storting the holding of a referendum on the dissolution of the union with Sweden. The proposal was referred to a special committee.

Coincident with China's notice to the Powers that Manchuria must be restored to her intact, whatever may be the terms of agreement reached at the Portsmouth Peace Conference by the envoys of Russia and Japan, it is learned that the Chinese Government intends to follow up this by demanding of the belligerents a big indemnity as compensation for the occupation of Manchuria by hostile armies. The amount of the indemnity to be asked will be at least \$100,000,000. This amount of damage, the Chinese Government estimates, has been done to Manchuria, a Chinese province, through the trampling down of the fields, the destruction of villages that were seized and held as bases for operations, and the losses and suffering to Chinese through the failure of the belligerents to evacuate Manchuria promptly. It is believed that the real motive in taking such a step is further to define her position with regard to Manchuria to the world at large.

A new congress of Zemstvos and municipalities will assemble at Moscow in August, in which two peasants from each province and also representatives of the numerous liberal unions will participate.

The Moscow police last week seized all the documents relating to the proceedings of the late congress. In that congress the Zemstvos introduced the text of a draft constitution. It follows closely the main principles of the Moscow municipality's draft. It proposes two chambers; the upper one to be elected by the local government electorate, which appoints the Zemstvos, the lower one to be elected by universal suffrage.

The statement issued by the Comptroller of the Currency, in view of the large subscription in this country to the Japanese loan, is of interest. In the Empire there are 2,254 banks of various kinds, the total resources of which aggregate \$953,000,000 in American money, an increase of \$69,000,000 over last year. Loans and discounts amount to \$655,800,000, bonds and other investments, \$113,200,000, due from banks \$63,850, cash on hand \$88,650,000, other assets \$31,000,000. The liabilities of these banks are: Capital, \$196,250,000; surplus and profit, \$58,600,000; circulation, \$46,250,000; deposits, \$475,500,000; due to banks and other liabilities, \$76,400,000.

Ten Powers signatory of the Treaty of Madrid have officially accepted the Sultan's invitation to the international conference on reforms in Morocco. The United States, Sweden, Norway, and Portugal have not yet replied to the invitations extended to them.

Emperor William of Germany and Czar Nicholas of Russia met at a point off the Swedish coast near the island of Bjorkoe on the 24th ult. There has been a great deal of speculation as to the object of the conference.

The population of China, in a statement issued by the Bureau of Manufactures of the Department of Commerce of the United States, is estimated at four hundred and thirty-two millions.

Industrial and Commercial.

A statement of exports from New Orleans to Panama for the six months ending June 30, 1905, shows a pronounced increase over the preceding year. The figures for eleven months ending December 31, 1904, show that various articles of merchandise and manufactures handled through the local consulate amounted to \$325,850.69, as compared with \$280,866.39 for the first six months of the current year.

The boycott of American goods by Chinese merchants seems to be assuming considerable proportions. The boycott is thought to have been initiated by students educated in Europe, America, and Japan. A significant feature of the boycott is that it is confined to a refusal to make fresh contracts. Existing contracts are being fulfilled.

Earnings of the United States Steel Corporation for the second quarter of the year ending June 30, last, were officially announced last week to be \$30,305,116.

General.

The discovery of an ocean desert destitute of every vestige of plant or animal life, and covering millions of square miles of the bed of the Pacific, is the news brought back by Professor Alexander Agassiz, just returned from a six months' cruise in the Government sounding boat Albatross. The discovery is one of the most important made in twenty years, and takes rank with some polar work and with Henry M. Stanley's African explorations. It may overturn all present notions as to deep-sea life. The ocean desert lies almost directly west of the continent of South America and, beginning about 600 miles west of that continent, covers an area approximating 2,000,000 square miles, or a little larger than Russia, extending somewhat north of the equator and south of the twentieth parallel of latitude. This ocean desert is in shallow water, when compared to the immense depth of the rest of the ocean's floor. It is, in reality, an immense volcanic plateau. The average depth was 12,000 feet. There are parts of the ocean which have been sounded to 24,000 feet; so it is apparent that this is not to be regarded as low bottom. This plateau is almost level, daily soundings showing hardly 1,200 feet variation in 2,000 miles. On this vast plain not a vestige of plant or animal life is to be found.

The Atkins Saw Works of Indianapolis has just completed and shipped a large saw containing two hundred teeth, with a Brazilian diamond imbedded in each tooth. The saw is to be used in one of the big stone quarries at Bedford, Indiana. The saw is eight feet in diameter, five-sixteenths of an inch thick, and weighs almost half a ton. This saw has almost a smooth edge. Secured across the edge of the outer rim are two hundred inserted steel holders; imbedded in each is a large Brazilian diamond. The diamond points compose the teeth of the saw, which will be used to cut Indiana limestone into desired sizes. The diamonds are about a karat in size and are very dark. Each stone is valued at \$20. Two other saws, duplicates of the one completed, are in the course of construction and represent a cost of \$10,000.

The vast edifice which is to house the New York Public Library, fronting on Fifth Avenue and filling the ground between Fortieth and Forty-second Streets, is slowly rising. Some idea of its proportions may be gained when it is stated that eighty miles of book shelves are to be supported by the stack-work in the main building. The cost of this shelf work alone will be \$916,703. In the cost of the building, the number of books, and the amount of shelving it will be equalled by few similar institutions. It is to unite the Lenox and Astor libraries, the library of Samuel J. Tilden, and the proceeds in books of a large part of his fortune.

The Blue Hill Observatory, near Boston, is conducting experiments in atmospheric soundings at great heights above the continent along the Mississippi Valley and the eastern tropical Atlantic. The Smithsonian Institution is to defray the expenses of a new series of experiments soon to be made. During the ascension last January the extraordinary temperature of 111 degrees below zero was reported at a height of rather more than nine miles, but it is expected that higher temperatures and less rapid air movements will be found to prevail in July. In the twenty-three previous ascensions, all but one balloon and instrument were recovered.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

The New Creature in Christ.

C. W. CHADWICK.

Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new.—PAUL.

THE Scriptures have not a little to say concerning the putting off of the old man and the putting on of the new; and Christian Science brings the subject very forcibly to our attention by making clear to us the necessity of doing this most important work at once. We no longer have to wait on gray hairs or decrepitude to reveal "the old man" here referred to; the young and the aged alike find themselves very intimately associated with this universal belief in the mortality of man, and they begin to-day, if they are wise, to put it off.

One of the great mistakes of the past has been the unwitting attempt to find the *new* man before taking the very first step towards putting off the old, and this has led to all sorts of erroneous theories and conclusions concerning God and His creation, so that men have groped on in darkness, trying to be good at times, trying to love the very opposite of themselves, while still believing mortal existence to be perfectly natural and of divine procurement. This well describes the inevitable result of serving two masters, whether ignorantly or intentionally, and of trying to put "new wine into old bottles."

To believe in two powers, in both good and evil, will never lead to an understanding of the omnipotence of good, nor will a belief in the reality of both mortality and immortality, both matter and Spirit, ever result in a correct understanding of either. Why is it that so many people are trying to thus believe? Is it not because of a partial compliance only with Christ's commands, preaching without healing, talking about God and the kingdom of heaven, without demonstrating the unreality and nothingness of evil? Even so, and professing Christians should give this thought most serious consideration. In the ninth chapter of Luke we read that Christ Jesus gave his twelve disciples "power and authority over all devils, and to cure diseases," and that "he sent them to preach the kingdom of God, and to heal the sick;" and there is nothing in Holy Writ or elsewhere to indicate that he gave any contrary instructions at any time. This is sufficient authority for the assertion that the Gospel of Jesus Christ was and is just as much a saviour of the body as of the soul. To deny this fact and yet expect to be endued with spiritual understanding is as impossible as it would be to separate the sun from its rays of light and still expect to have light.

Jesus made no attempt to blend mortality with immortality, nor did he try to spiritualize and thereby perpetuate materiality. His teaching explained away matter. He did not try to make an immortal out of a mortal, but rather to show humanity how to exchange its mortality for immortality. This is clearly set forth in the well-known admonition to his followers, "If any man will come after me, let him deny himself, and take up his cross, and follow me." To the Christian Scientist this problem of denying self is

no mystery, but a practical, every-day privilege as well as duty, wherein he reckons himself not "of the earth, earthy," but of Spirit, and therefore spiritual. In the faithful performance of this duty grand results are being accomplished in all parts of the world. The sick are being healed, intemperance abolished, and the sinful reformed,—not by trying to make a good man out of a bad one, but by showing the wicked man how to free himself of his wickedness; how to nullify his belief in mortality and thereby to understand the reality of an ever-present immortality; how to cease thinking that man is mortal, that he may devote his time and attention to the contemplation of man's spiritual existence as a child of God; how to annul all belief in a suppositional dual nature in man, in order to make way for the supremacy of the spiritual, the real and eternal; in other words, how to forsake and overcome the false before he can understand what is true and real.

The laborious effort to establish and maintain a relationship between mortality and immortality must prove futile, for the two do not and cannot unite in cause or effect. The attempt to make them do so will only continue to blind man to the truth of his being, and rob him of conscious control over the body.

The coming of Christ to individual consciousness is the birth of the new man in this consciousness. It is therefore evident that one of the first signs of true mental development will be the healing of what is termed the physical body, since Christ never comes without healing in his wings. This Christ-idea says and will continue to say, "Cease ye from man, whose breath is in his nostrils," and just to the extent that this injunction is intelligently obeyed, will the new man, or new creature in Christ, be in evidence, here and now.

Some of his strongest characteristics will be meekness, humility, and honesty. And never will you hear him say, I am sick; but, instead, I am well and happy, because I am God's perfect idea, the child of no lesser parentage. Examine closely into his mental structure, or embodiment, and you will discover a pure state of consciousness, wherein old things (thoughts) are passed away and all things are become new. Among his other characteristics you will find gentleness, kindness, and true Christian charity and forbearance, a disposition to think of others only as God would have him think, and he will consequently be less inclined to criticize and condemn the conduct of others, less inclined to speak carelessly or hastily upon any subject, or to do anything that would wound or offend.

Another prominent characteristic will be an active interest in things pertaining to God and His Christ, in all that makes for the moral and spiritual upbuilding of humanity, and the consequent desire to talk of such things, rather than to dwell upon the discordant things of earth, which tend to obscure the kingdom of heaven within. You will also find him a true friend and neighbor, never indifferent to the needs of others, but always thoughtful and considerate of their wishes, ever rejoicing in their successes, never in their failures, ever ready to give credit where credit is due, and to be just and merciful in the presence of ingratitude and persecution. In fine, the new creature in Christ is in a

divinely natural state of consciousness, void of all sham or pretence. He is the expression of God, good, displacing the unnatural beliefs of false human sense. He is not a mortal, nor is he in any way related to mortality. He is no post-mortem product, but is, instead, the product of right-thinking, whereby the mortal gradually melts into shadow and God and His reflection are found to be all-in-all.

We shall find this new man a faithful communicant and liberal supporter of the church, with moral courage to define and defend his faith among men, and striving in every way possible to advance the cause of Christian healing on earth. Last, but not least, we shall find him ever grateful and loyal to the Discoverer and Founder of Christian Science, for her priceless gift to humanity. May we extend to this new creature in Christ a most cordial welcome by relegating all belief in mortality to the dead past as a dream that is told.

Love Your Enemies.

JOSIE F. OSBORN.

But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you.—JESUS.

THERE is a great need to-day that this command of our Master be obeyed. If we open wide the door of our own heart to the inpouring of ever-present Love, then shall love well up with increasing flow, quenching our own sense of error and that of our brothers. The necessary work to be performed is individual, each casting out of his own consciousness whatever prevents the full and free work of the Spirit within, and it is ours to be true to the teachings we have already received. Then let us rise above all discords and dislikes, into the pure atmosphere of Spirit, where no mesmeric influence can separate the children of divine Love. How earnestly we should heed the oft-repeated prohibition, "Let none of you imagine evil against his brother in your heart." Suspicion is self-mesmerism, which sees its own shadows cast upon others. If human will power (so-called) could have power to oppose God, it would oppress and destroy the spiritual idea. The constant rehearsing of our brothers' faults,—the antipodes of the divine characteristics, is an error which should have no power over one who through his experience has learned to dwell in the consciousness of Love for protection. The conscious or unconscious holding of another under the belief of error would assert a creation from beneath, rather than from above. It is like the surgeon who, through an unskilful operation, makes his fellow-man lame. We should see error as error, a mistake as a mistake, then know the nothingness of any power apart from God. This will help to shield our brother from the downpour of evil, help to bring him to the realization that he lives, moves, and has his being in God. The tender, compassionate consciousness is enthroned in the security of Soul, and reflects the might and grandeur of divine Love. As we rise higher in understanding and manifest more love in our daily contact with others, we are brought face to face with deeper problems, which we can only solve scientifically, in the way of our Master,—by overcoming all evil with good, all hate with love, all cursing with blessing.

An ever-increasing demand is made upon us for higher proofs of our fidelity to Love, manifested in forgiving our enemies through the realization of the allness of God. We need to watch and pray that we enter not into temptation, and we should earnestly desire the Spirit of him who had such dominion over sin as to be able to say on the cross, "Father, forgive them." Have we resisted unto blood in striving against sin? The student of Christian Science learns that through enemies, so-called, more than through friends, comes the experience by which his life becomes more consecrated to God. If, when we are forsaken, betrayed, having lost all that human sense holds dear, we fall at the foot of the cross and ask with a broken and contrite heart

for aid and understanding, we thus learn the lessons of infinite Love. A true sense of love for God and man fills the heart, and through tears of humility we pray for those who have seemed to be unjust and without mercy,—for those who have driven us to God for refuge and safety, by giving us the cup of grief to drink to its dregs. It is this meeting and overcoming of the sense of hate with love, which crucifies sense and self, and we cannot expect to find harmony until the sense of evil personality is swallowed up in the realization of the allness of God. Inspiration comes, even though we suffer in the effort to forgive our enemies, and we prove this when human will-power, inflamed with distrust and hate, drives us to divine Love for refuge. In this secret place of the most High all past mistakes and errors are blotted out, and a love for our brother, soft and tender as the glow of a moonbeam, fills the heart.

Then, brother man, fold to thy heart thy brother!
For where love dwells, the peace of God is there.
Christian Science Hymnal.

Name and Essence.

A. M. P.

MANY years ago a seeker after Truth found much pleasure in the pages of a certain work, and among the thoughts new to the reader was this, that the name and the essence are one. Like a seed awaiting the hour of germination this thought lay in the memory until Christian Science awakened it to vigorous life. It was in studying the Bible in the light of Science and Health that the writer realized, not only how wide was the application of the statement to biblical writers, but also what a deep significance it has for the scientific student of the Scriptures.

The following are a few examples culled from the many which illustrate our subject. In the Master's wonderful prayer, given in John, are these words, "Holy Father, keep through thine own name those whom thou hast given me;" here, knowing in Science that the Father is no human concept of Deity, localized and vaguely spiritual, but actual Life, Truth, Love, we can see clearly how our Father keeps through His own name—essence—those who cast in their lot with Christ, Truth.

"Hallowed be thy name!" In giving us the spiritual interpretation of the Lord's Prayer, to convey the true meaning of these words of Jesus, our Leader has most beautifully confirmed and illustrated the thought that the name of God should be to us the perfect synonym of His essence. In Luke's gospel we find these words, "Notwithstanding in this rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven." What light is thrown upon this passage by Science! Not so much are we to be glad because the devils—special phenomena of sin, sickness, and death—are subject to us, through Christian Science, as because the fixed reason of our dominion is laid bare; namely, that our nature is the reflection of Spirit, and is therefore harmonious throughout. Our names are verily "written in heaven."

Paul says, "I verily thought with myself, that I ought to do many things contrary to the name of Jesus of Nazareth." Here is a self-evident illustration of our seed-thought. It conveys also the touch of irony with which the brave Paul rebuked his former concept of his duty. "Picture me," he seems to say, "actually thinking I could crush this manifestation of God, the Christ-essence and its work among men!"

In Acts we read, "And his name through faith in his name hath made this man strong." As Christian Scientists we know that it is the understanding of God's essential nature which heals, and also that there must be an absolute, child-like faith in that nature manifested, or no "mighty work" can be done.

The Psalmist says, "For Thy name's sake, O Lord, pardon

mine iniquity; for it is great." Scientifically interpreted, this means that because the nature of God, Love, involves infinitude, therefore sin has no place, is non-existent, and the mortal sense and practice of it are destroyed as that infinitude becomes apparent. It were useless to make this appeal to a name, however seemingly sacred, did it not stand for the very nature that knows no opposite to its own glorious being. Said Christ Jesus, "And whatsoever ye shall ask in my name, that will I do, that the Father may be glorified in the Son." The spiritual idea, the Christ-name or essence, is receptive of all blessing, and thus is constantly receiving good. It can truly say, "All things that the Father hath are mine."

Divine Love! thou only name, thou only essence, bless yet more the dear one who in our day hath taken of these things and shown them with sweet patience unto a weary, sin-sick world.

Harmony vs. Discord.

FLORENCE PARKER.

ONE day a clever violinist friend got into the train with me after a hard day's teaching. She was tired, and her last pupil, a boy of ten years, had given her much trouble. She told me that his latest idea was to insist on knowing the names of the intervals between the semi-tones, and when he was told that they had no names, for there were no such intervals on the violin, he insisted that as he was able to produce such sounds, they must be real, and have names; and he accompanied his words by discordant sounds on his instrument. Nothing would convince him that, even though he could produce these seeming intervals, they were wrong, and had to be avoided if he wanted to understand and express beautiful music.

After she had left me I sat thinking about Christian Science, and it suddenly came to me how much we beginners in Science are like that small boy. We insist, some of us, on believing that error,—sin, sickness, death,—is real; we have even gone so far as to give it names and places, and made it seem impossible to demonstrate harmony, because we thus allow discord to secure a foothold. We must, therefore, do what the small boy is learning to do under his wise teacher,—avoid looking for, or listening to, or believing in, things that do not exist, and then we shall slowly but surely rise into a glorious understanding of the perfect harmony of the things that are.

The Demoniac.

FLORA BELLE JOHNSON.

THE story of the man who dwelt among the tombs in the land of the Gadarenes, whom no man could tame, reveals the misery, unrest, and oftentimes wildness of the thought which dwells in a belief of life as material, tossed and torn by sin and its effects,—remorse, anguish, and all the train of evils which circle around the dominant thought of a physical self. It is limited by circumstances and bound by a sense of fatality which resolves itself into fear and dread of the unknown, and, to its sense, unknowable. The possibility of present release from this condition seems almost inconceivable to the human mind, which has submitted to these conditions with a resignation that would be heroic were it not so pitiable and so unnecessary to our enlightened understanding of the true mission of Jesus.

Jesus came to burst these bonds of thought, or thoughts of bondage, asunder, the last he rent being that of the tomb, or thought of death. He said he came that we "might have life" and "have it more abundantly," and our Leader has given to the world the Science by which we may obtain this life.

We are taught to destroy, through our apprehension of the Truth of being, the false, fleeting, destructive thoughts

which assume to be real and produce a belief of what Paul calls the "carnal mind" at war with Spirit. Each victory releases us from the tomb of mouldy and mouldering beliefs, and brings more and more of the understanding of Life indestructible and eternal.

This method of procedure sheds a radiance upon the Scriptures, and produces results which show the transforming power of Truth in the healing of the body. Paul says, "This mortal must put on immortality." We must be willing to let mortal thoughts go from us. In the Apocrypha we read, "Let go from thee mortal thoughts, . . . put off now the weak nature." The Bible teaches that according to the working in us of the Christ, the activity of Truth, this change is brought about. Our faithfulness and quickness in discerning between a mortal belief under any guise and an immortal thought, tests our worthiness to become the immortal children of good.

That mortal existence is bondage we see from the penalty attached to a belief in diet, one article of food after another being dispensed with in certain cases, until little or nothing is left, and death from starvation awaits the patient. We learn through Christian Science there is more real life in one good thought or deed than in years of mere physical life, so the patient is instructed to let his belief about diet, die, and save himself from dying with it. We thus learn what should die; namely, mortal, material thoughts; and when we learn to annihilate the false belief, substitute the truth for it, and do it patiently and persistently, then it comes to pass that mortality is "swallowed up of life." For thought has "put on immortality." Then are put on the garments of salvation and righteousness,—right thinking,—and man, clothed therein, is in his right mind.

[Written for the *Sentinel*.]

Allegiance.

MARY J. ELMENDORF.

My hands in Thine meekly I place,
Love ever nigh, Love ever strong!
Mine eyes will seek to ray Thy grace,
My lips repeat Thy rainbow-song.
Clothed in Thy light, eternal Power,
That searches wave and hill and dale,
The barrens of my heart will flower,
And sworded faith o'er doubt prevail—o'er strife prevail.

Whispering, my voice will seek Thee, soft
As down that sails the silken wind.
Surging in song, my thought aloft
Will soar, staunch as the cedar-kind.
Thy will is mine by mead or scaur,
On heaving sea or tranquil shore;
Thy message is the morning star
That gleams forevermore—that guides forevermore.

Quickened by Thee, white buds of love
I cull from longwhile bloomless leas,
And catch, earth-dissonance above,
Fragments of Spirit-harmonies.
Led by Thy word, O God, and light,
Stillling the gale and night's alarms,
My heart will know the peace and might
Of Thine enfolding arms—Thine everlasting arms!

O for a voice of power to arouse the human spirit from its death in animality, to quicken it with a fit consciousness of its own nature, to lift it to an adequate comprehension of the purposes for which the sublime thoughts of God, of duty, of disinterested love of heaven are opened within!

Peace Envoys to have State Welcome.

Portsmouth, N. H., July 26.—Elaborate plans are being made by the State of New Hampshire for the reception of the Russian and Japanese peace envoys by Governor McLane when they arrive in this city next Monday. It is planned to hold the reception in the big county court house in State Street, which is admirably adapted to such an occasion.

It is proposed to have the envoys come up to this city when they arrive here in the cruisers Dolphin and Mayflower from Oyster Bay. At the government landing they will be met by a company of United States cavalry from Fort Ethan Allen, Vermont, and escorted to the new court house, where they will be received and tendered the freedom of the State by Governor McLane, council, and staff.

It is proposed to make elaborate changes in the building to make it suitable for the occasion, and the State will spare no expense. It is also thought that one of the regiments of the State militia will be ordered here for the day, and that the street from the landing to the court house, as well as the building, will be guarded by soldiers.

After the reception the envoys will be driven in carriages or automobiles to the Hotel Wentworth and assigned their apartments, the cavalry doing escort duty to the hotel. It will be the greatest State function held in New Hampshire for years, and the governors and congressional delegations of the New England States will unite for the occasion. The event will attract thousands of people to this city, and the railroads are making great preparations for the affair. Excursion trains will be advertised.

At the Hotel Wentworth the suites of rooms for each set of envoys have been made ready, and Manager C. A. Wood is making elaborate preparations for their entertainment, as well as that of the small army of newspaper correspondents who have taken rooms at the hotel.

Concord (N. H.) Daily Patriot.

Sam Jones and Christian Science.

Editor Times:—I have just read your report of Rev. Sam Jones' lecture, in which he makes some very serious and very erroneous remarks about Christian Science, and I desire to say a few words through your good paper based upon your report and the common talk of what he said.

As to the statement that Christian Science is an evil and a fad, I submit first, Mr. Jones' own argument that no man's opinion about a fact will change a fact. Furthermore, Mr. Jones is so far from the facts in this case that he clearly cannot judge. He says, "When you have a pain, all you have to do is to think you have no pain and it is not there. I know that is a lie!" Christian Scientists quite readily agree with our critic. Such a method would not cure the toothache he spoke of having, nor anything else. Christian Science does not "start with the theory that there is no pain." It starts with the fact, "In the beginning God," or, as I am told it stands in the original, "To begin with is God," and it continues from this beginning, following very logical conclusions and none other.

Like Job's young friend, Elihu, Christian Science comes, having "yet to speak on God's behalf," and not only confessing Him absolutely first in all things, but, through its practice as religion, its followers, who number "thousands upon thousands," are daily finding new life, new hope, more and better love, and more and better health.

Those who know Christian Science by its fruits, know that it is of God and is not evil; they know that it brings people to the Mind "which was also in Christ Jesus," and is not a fad.

Those "thousands upon thousands," who have been "caught" by the healing of their aches and heart-aches, have

a right to render "unto God the things that are God's" without becoming the subject of flippant jokes, ridicule, and misrepresentation.

HERBERT M. BECK.
Fort Smith (Ark.) Times.

The following editorials appeared in connection with Mr. Beck's letter, which is given in part above.—[Ed.]

Twice it has happened, once last year and again this year, that speakers on the Chautauqua platform have seriously offended and hurt a considerable part of the audience by critical, caviling, or otherwise offensive reference to their religious beliefs. Of course the Chautauqua directors cannot be expected to know in advance what each lecturer is going to say, but, bearing in mind the fact that the patronage of the Chautauqua is drawn from people of all beliefs, it would not be exacting too much of them to stipulate that nothing shall be said from the Chautauqua platform that can wound the religious sensibilities of any one.

The Chautauqua is not the place for the discussion of dogma. If religion enters, and it properly may do so, it should be on the broadest lines only.

Certainly the Chautauqua board cannot ask people generally to come to the assembly when their religious sensibilities are likely to be wounded, and their beliefs ridiculed, and this is so even though the majority of those who heard the speaker might entertain views similar to those expressed. Charity and forbearance count for a great deal more than any harsh criticism or coarse jest that carries with it a sting and reproach.—*Fort Smith (Ark.) Times.*

In the course of his talk Saturday night, Rev. Sam Jones took occasion to cast a slur upon the beliefs of the followers of Mrs. Eddy.

Now the writer of this article is not a member of the Christian Science Church, although he has been in a position to note the effects of their teachings and practices, and has a great respect for them. The man who says "there is nothing to Christian Science" does not know what he is talking about, for even members of the medical profession admit that there is a great deal to it; and the individual who, before an intelligent audience, will talk on the subject as Sam Jones did, not only offers a gratuitous insult to the members of a cult which has hundreds of thousands of followers among the intelligent men and women of the world, but he displays his crass ignorance and abominably bad taste.

And this with all due reference to the fact that the Rev. Sam Jones said some good things in his speech of Saturday night. For let us give every man his dues.

Fort Smith (Ark.) News Record.

Christian Science classifies pain as belonging to the category of the phenomenal, and not to the category of the real. The term real is applied by Christian Science to nothing which is not of God; it is never applied to the phenomenal universe. This classification substantially follows that made by Paul: "The things which are seen are temporal; but the things which are not seen are eternal." The latest teachings of the physical scientists are largely in accord with this classification.

Christian Science, however, deals with physical pain and sickness as things which seem very real to the sufferer. In other words, like all other manifestations of matter, they seem real to our sense-perception and sense-consciousness. They do not belong, however, to the category of realities.

A clergyman is represented as having argued in a recent sermon that God sends pain to discipline and thus better mankind. Christian Science utterly repudiates such a doctrine. If God be perfect, then no imperfection can proceed from Him. If God be all-wise and all-powerful, then God does not need to use evil to bring forth good. Deity is not thus helpless.

HON. CLARENCE A. BUSKIRK.
Terre Haute (Ind.) Gazette.

Among the Churches.

Sharon, Pa.

Quietly, and with that absence of ostentation which characterizes all of their movements and achievements, the corner-stone of the handsome new First Church of Christ, Scientist, which is being erected at the corner of South Irvine Avenue and A Street, at a cost of about \$7,000, was laid at 6 o'clock Tuesday morning. This new church will be the second church building erected in the State of Pennsylvania by Christian Scientists.

The Christian Science movement in Sharon began about fifteen years ago, and has grown steadily.

Sharon (Pa.) Telegraph.

Fitzgerald, Ga.

First Church of Christ, Scientist, of Fitzgerald, Ga., with deep thankfulness to God, the giver of all good, for His unceasing care, and as a small but loving token of gratitude to Mrs. Eddy for her unselfish labor of love to this age, devoted its Easter contribution, which was twenty-five dollars, to the Building Fund of The Mother Church.

About nine years ago the church was first organized, with fifteen charter members, and in two years a church was dedicated free from debt, the first Christian Science church erected in the South. During these years cases of healing have been wrought, proving the promise of Jesus, "These signs shall follow them that believe." This is a new colony city, the population has been continually changing, and many of our members have left for other fields. However, the few who have remained are now rejoiced to see the work advancing.

Our desire is to reflect that Life which is Truth, and that Truth which is Love.—ADELAIDE M. RUBSAM, *Clerk.*

The Lectures.

Hartford, Conn.

At Parsons' Theatre, Sunday afternoon [March 19] Bicknell Young of Chicago delivered an address on Christian Science. At the hour appointed for the lecture, every seat in the theatre was taken. Mr. Young was introduced by Mayor William F. Henney, who spoke as follows:—

I am not a Christian Scientist, but a Presbyterian. As to whether there is anything incompatible in the two, I am not sufficiently informed of Christian Science teaching and practice to hazard an opinion. It is due to you and to myself, however, that I should say this much, as I have no desire to sail under false colors. I am here this afternoon, as I trust you are, to listen and to learn.

If you turn to the pages of any literature, you will find ever and again expressions of the finest minds, bewailing the fact that the lives men live are artificial and unnatural, wholly out of harmony with the laws of nature and hopelessly incapable of getting into harmony with those laws, and to this they attribute all the saddest things in human history.

It is the desire to remedy this condition that has made the hearer of a new message so welcome in every age to thinking men. It made Paul the center of an eager multitude on Mars Hill, it made St. Patrick welcome in every hovel and palace in Ireland, it makes the great inventor and discoverer the object of admiration and adulation to the men and women of our times.

The test of the culture and enlightenment of a community is its receptivity to truth, and the citizens of Hartford are pre-eminent for bringing to any subject inviting their attention an open mind and heart.—*Hartford Times.*

Portland, Me.

One of the largest audiences ever inside of Kottschmar Hall attended the lecture on Christian Science given by Judge Septimus J. Hanna last evening [May 22]. Hon. Charles F. Libby presided, and introduced Judge Hanna, saying in part,—

I cannot claim to appear before you as a Christian Scientist. I have, however, many friends who have found great help and comfort in that faith; and when some of them asked me to introduce the distinguished speaker of the evening, I felt that that was the slightest service I could perform on their account. I am glad, moreover, to be able to extend to a member of my own profession a cordial welcome to our city, and to assure him of that kindly reception which I know our citizens are always willing to give to all who are seeking to lift humanity to a higher plane of thought and to infuse a new sweetness and light into life.

Portland Press.

Alma, Mich.

The teachings of Christian Science were ably set forth in a lecture [June 2] by Edward A. Kimball of Chicago. The lecturer was introduced by W. A. Bahlke, a leading attorney of Alma, who said in part,—

There can be no question but that Christian Scientists are conscientious and enthusiastic in their faith. They accept the teachings of Jesus Christ as an inspiration of God, infallible and ennobling. Their faith constitutes a spiritual guide to their lives. It makes them better men and women, better fathers, mothers, citizens, friends. For this reason, among others, every good citizen owes to this church a debt of gratitude—it constitutes an active, positive, elevating, and moral force working for the evangelization of the world. As such it is one of the many agencies now at work for the betterment of mankind. If by it there are those who can be reached for this end that cannot or would not be reached or saved by other enlightening influences, as it seems evident to all thoughtful and observing persons there are, then without hesitation we should commend their cause and encourage them in their work.

This is but discharging the duty of good citizenship which rests upon every responsible person. The world is growing too liberal and cosmopolitan for any man to condemn any agency for good because it does not appeal to his judgment as abstractly right. Conscience can be relied upon to guide us in the right determination of these agencies. Let us, therefore, be unprejudiced, unselfish, receptive, and train our minds to become impartial, that we may receive the truth and make it a part of ourselves, from whatever sources it may come.—*Alma Journal.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Orderly Methods Needed.

ONE of the duties imposed upon The Christian Science Publishing Society is that of passing upon the eligibility of the churches and societies which seek to have their services announced in the official organ of the denomination and thus become identified as component parts of The Church of Christ, Scientist. The individuals who have this duty to perform have frequently found themselves seriously hampered in their work by reason of the loose methods and lack of proper organization which prevail in some of the smaller churches and societies. Some of these small congregations are practically unorganized, others have very crude and imperfect forms of organization, and frequently the task of deciding upon the legitimacy of their claims to official recognition is quite difficult. In some places a person simply "takes charge;" there is no election of Readers, no provision for admitting eligible persons to membership, no list of members, and no definite arrangements regarding finances, all of which omissions and irregularities usually contribute to a state of discontent that is harmful to our Cause, that stunts its legitimate growth.

We believe that every little band of workers who come together and hold services, hopes that it may prove to be the nucleus of a large and flourishing church, and in the majority of cases this hope is eventually realized. It is, therefore, the part of wisdom to lay a foundation which will support a progressive and growing organization. This does not mean, "when two or three are gathered together in His name," that they should form an organization upon lines suitable to the needs of a church with several hundred members; but whatever the form of the organization, it should be definite, and with such rules as will tend to the orderly transaction of business, permit of the growth of the society, and safeguard the rights of the individual members. If each step be taken rightly at first, much friction and misunderstanding will be prevented. In many places where confusion prevails it is simply because of a lack of knowledge.

Briefly stated, the essentials are: 1. A society which is not in conflict with the State law governing the formation and conduct of religious societies. 2. A set of rules or by-laws which conforms to the requirements of the State law and which provides for the election of additional members, the dismissal of members, the election of Readers and such other officers as are necessary, also for the holding of regular and special meetings. The fewer and simpler these rules are the better it will be for the society, but this should not be understood to mean that anything indefinite or inadequate is advocated. As the society grows in membership and importance other rules may be added, but they should be only such as the growth of the organization calls for, and their object should be to simplify the administration of the affairs of the society rather than to establish an intricate and cumbersome code of procedure. 3. A complete and accurate roll of membership; a legible and correct record of the proceedings of the society at its business meetings, and a strict compliance with the rules or by-laws, especially those relating to the election of officers. We know, of course, that rules and by-laws do

not of themselves make a Church of Christ, Scientist, but if they are definite and adequate, and are lived up to in both spirit and letter, they will certainly tend toward the promotion of harmony and thus add to the effectiveness and prosperity of the church as well as to the peace and happiness of the individual members.

While we are on this subject of church organization it will do no harm to repeat that a large number of weak and struggling churches, the members of which are not healing the sick and not giving other visible evidence of the efficacy of our Master's gospel, add nothing to the strength of our Cause, but on the contrary they constitute an element of weakness. We therefore counsel Christian Scientists to be conservative in the matter of establishing branch churches and societies. Notwithstanding the seeming paradox contained in the statement, we feel sure that more and better churches will be established by healing the sick than by hiring a hall and holding public services if little or no healing is being done.

ARCHIBALD McLELLAN.

"Treasure in the heavens."

IN the study of our text-book we are frequently reminded that an understanding of spiritual law and order must take the place of mere belief in what the world calls "the supernatural." Most persons who accept Christian Science come to see this very readily with respect to the healing of sickness, but they fail to apprehend it with equal clearness when attempting to apply their understanding of the truth to other problems of human existence. Now every schoolboy knows that if he understands how to work a problem in arithmetic he will get the correct answer. It may sometimes happen that a boy who does *not* understand, also gets a correct answer, but his chance success would be no argument against the necessity for study of the basic law and rules involved in every case. We can never become mathematicians by chance, but only through understanding.

It would seem that in many instances students of Christian Science hold mistaken notions respecting the overcoming of poverty or lack, and the tendency in some cases is to depend upon what is really blind faith,—a belief that a supply will come in some unknown way,—or else they seek to identify the material with the spiritual, and thus claim for the unreal the qualities of the real. It is true that the promises of the Bible are both definite and positive as to the supply of all our needs, but every promise is conditioned by the faithfulness of our observance of law and order. The command to seek first the things of God can never be thrust aside by any clamoring of material necessity, and in every case the condition to be fulfilled is a provision of divine Love and wisdom. The Master said to the anxious and troubled, "Consider the lilies of the field, how they grow," and this admonition has often been taken as an endorsement of idleness, a thought which is doubtless wide of his meaning. While the flowers of the field neither toil nor spin, they fulfil the ends of their being, in obedience to law and order, and that, too, without fret or failure. Surely no less should be expected of man, who, according to the teaching of our text-book, includes in his consciousness all the lesser ideas of divine Mind. It is therefore his privilege to express in his character and his activities the beauty and fragrance of the flower, the diligence and forethought of the ant, the swift, unwearied flight of the denizens of the air.

The birthright of God's man is the sole charter of our liberties. It admits of no subjection save to the supremacy of God, good. The recognition of this birthright gently loosens the frenzied grasp of mortals upon their material gods, and lifts the liberated thought up to noble achievement and true success,—the attainment of possessions which are not burdensome. A business man who has proved the

value of Christian Science on this line, writes of his experience as follows:—

"When I took up Christian Science some seven years ago, I tried to take all of my material gods with me, with the result that I was very thoroughly stripped of nearly every material possession that I had, and without the sustaining influence of divine Love, as revealed in Science and Health, I should have been in the 'slough of despond,' but by continually declaring the omnipotence of Truth, by striving to conform all my thoughts to the teachings of the Master, by becoming honest with myself, and by reading and studying the Bible and our text-book daily and with understanding, the victory was won, and my faith in God's wonderful care of His children became stronger than ever before. I found that one of the hardest things to do was to take 'no thought for the body,' what we shall eat or what we shall wear, to know that God knows all of our necessities before we do, and that if we love Him and keep His commandments, He will provide all that is necessary, for us as soon as we have earned it or have become worthy."

The Master assured us that when we ask the Father for bread He will not give us a stone. Many do not ask for bread,—they ask for a stone, and they are sorely disappointed when it is lovingly denied them. Later, they ask for bread, seek it scientifically, find it, and know it to be that which "giveth life unto the world." To one thus uplifted, the luminous atmosphere of faith reveals divine possibilities hitherto unperceived, while deepest content comes with the loving assurance, "It is your Father's good pleasure to give you the kingdom."

ANNIE M. KNOTT.

New, not Made Over.

PAUL's appealing counsel, "Be ye transformed by the renewing of your mind" (Romans, 12 : 2), as etymologically interpreted in generally accepted theology, has given rise to the belief that regeneration, the new birth, is a process in which the old man is simply cleansed and reclothed; the form, appearance, condition, and activities are all new, but the substance is preserved. That which was "conceived in sin and brought forth in iniquity," has been made pure and Christlike; the obdurate sinner is metamorphosed into a child of God!

This commonly entertained belief resolves itself into the simple declaration that evil can be fashioned into good, and the self-contenting materialist expresses himself in very kindred terms. He says, "Evil is but good in the making," it belongs to the cycle of things in which there are no absolute values, but only relative, and in which each factor has its necessary place and function. The Christian believer can but see that the logic of the materialist's position involves the giving up of moral discriminations, and he may vigorously protest, and yet if man was constituted by his Creator with the capacity to fall into sin, that capacity must be natural; *i.e.*, it must belong to the divine ordering. Furthermore, if the resistance of and final escape from sin is essential to character, effects a fine, high quality of manhood which, as we have been taught, is to be secured in no other way, then surely evil has a necessary place in the believer's cycle no less than in the materialist's, and in this respect they are legitimately classed together.

The study of St. Paul's teaching as a whole makes it clear that by "transformation" he meant the realization of that spiritual manhood in Christ which not only presents an entire contrast to the old man, in character and conduct, but which is wholly different, the change being effected not by the renovation of "the old man" but by his elimination. Again and again he emphasizes the thought that there is no good whatever in "the carnal man," and no good to be made out of him; that he is to be denied, "put off" and wholly separated from; and in all this he maintains the teaching of the Master and of the prophets, that evil is in its every

sense, aspect, and degree "an abomination unto the Lord," for which he has, and can have neither use nor tolerance.

Human consent to the admixture of good and evil is the "forbidden fruit" of Eden, whose eating was to entail an unspeakable sorrow and loss, and the outcome of this false interpretation of the meaning of "transformation" as Paul uses it, fully justifies the woeful prophecy of the early chronicler; the error is so fundamental and determinative as to bring disorder and consequent disease into every domain of human thought and experience.

In opposition to this religious teaching, which has obtained for centuries, Christian Science takes unequivocal ground in asserting that there is no transformation of evil into good, of error into truth; that it is as impossible to think that any element or feature of the man of sin can be retained and incorporated in the man of Spirit, as it is to think that darkness can be transformed into light, or a plausible fallacy into a demonstrable truth. If, we have been thinking that the shortest distance between two points is a curved line, we are compelled to give it up, *in toto*, when we come to apprehend, through mathematical processes or actual measurement, that this distance is a straight line. A false sense asserted its place in an unenlightened consciousness—that is all. From right consciousness it is utterly and forever excluded. So also in the teaching of Christian Science, the revamping of evil so that it becomes a part of good—the transference of some relic of the old self into the new—is entirely disclaimed and discarded, and for the fundamental reason that God, good, is all in all, and therefore to spiritual consciousness there is and has been no evil.

In the awakening to truth, the uncovering of error begets a sense of good and evil which leads to the interpretation of the universe and of man as of dual nature,—a view very generally accepted by those whose creed affirms the existence of but one God, who is the only cause and creator. The sense of duality and consequent struggle, so remarkably set forth in the seventh chapter of Paul's letter to the Romans, succeeds the torpidity of absorption in error, in contrast with which it is an "improved belief," but it must pass away and forever ere Jesus' prayer for the establishment of true spiritual consciousness, "that they may be one as we are one," can be realized. The idea that God's man is endowed with a dual nature and capacity is rendered impossible by the infinity of God and His manifestation, and it is further denied by the fact that in the measure of our attainment to the Mind that was in Christ Jesus, in that measure evil disappears from consciousness. It is apparent that to him who can know no evil, evil has no being. It is but a false sense, having no relation, not even that of oppositeness, to good.

The apprehension of this vital truth effects a transformation indeed; *viz.*, the appearance in consciousness of the Christ man who "knew no sin," and in whose guileless presence evil with its claim to prestige and power disappears. This is the renewal of our mind in Christ Jesus, through Christian Science.

JOHN B. WILLIS.

Letters to our Leader.

Chattanooga, Tenn., July 16, 1905.

Rev. Mary Baker G. Eddy, Concord, N. H.

Dear Mrs. Eddy:—Ten thousand dollars was given to our church on condition that we raise an equal sum for the purpose of erecting a church building. We had contributed a little over a thousand dollars towards this when, because of expressions from various members, the Directors called a meeting of the members, and in a session notable for harmony it was voted unanimously to send the contributions to The Mother Church Building Fund. We feel that it is a great privilege to prove that we are a branch of "the stem of Jesse," to show by sacrifice of selfish interests that we are members of the one body, the Church of Christ. Your

definition of gratitude, as growing in our hearts, will erect a building in Boston meet for the Master's use.

Yours sincerely,

LUCY HOLTZCLAW, *First Reader*.

First Church of Christ, Scientist, Chattanooga, Tenn.

MRS. EDDY'S REPLY.

Beloved Brethren:—Your Christian charity is building the addition to The Mother Church on the rock of unselfed love,—the rock of salvation, the foundation of divine Science.

Gratefully, lovingly thine,

MARY BAKER EDDY.

Chicago, Ill., July 14, 1905.

Dear Teacher and Leader:—We love to write you of things that will give you joy. During the first half of the present year, 1733 copies of Science and Health were sold from our Reading Rooms. I am more and more grateful each day for this truth.

Very lovingly, your student,

MRS. MARY A. PACKARD, C.S.D., *Manager*.

MRS. EDDY'S REPLY.

Mrs. Mary A. Packard, C.S.D.

My Beloved Student:—On reading your letter these words of the great Master flooded my thought, "Thou hast been faithful over a few things, I will make thee ruler over many things: enter thou into the joy of thy lord."

MARY BAKER EDDY.

July 16, 1905.

New York, July 27, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Our Honored Leader:—First Church of Christ, Scientist, of New York City, in triennial meeting assembled, has this day, in the spirit of unity and harmony, by a unanimous vote elected for a term of three years Mr. Edwin Francis Hatfield as First Reader, and Miss Sibyl Marvin Huse as Second Reader. They enter upon their duties with reliance in omnipotent Truth to meet the demands of the hour, and in loving obedience and loyalty to your great leadership. We, as members, inspired by your teachings and Christly life, and following your guiding thought, will continue to strive to demonstrate the power of the Christ-mind in the healing of sin and sickness.

FIRST CHURCH OF CHRIST, SCIENTIST, New York City.

JOHN D. HIGGINS, *Clerk*.

Moline, Ill., May 6, 1905.

Dear Mrs. Eddy:—I would like very much to see you and tell you how much I appreciate the gift of Christian Science, the knowledge that true Christianity is scientific and can be demonstrated as surely as any science can. I never had any religious convictions, and the Bible was a sealed book to me. I clung to the thought that there must be a Principle by which all things exist, and that it must be good only. I never could have known more about God and never would have read the Bible but for the understanding that has come through the study of "Science and Health with Key to the Scriptures," and the help of class instruction. It is the most beautiful thing in the world to know that we are related to God, that we cannot be separated from divine Principle; that He is ever present with us to guide us onward, and that "all things work together for good to them that love God." I can never be grateful enough for the understanding I now have, but I long to know more and to be better able to help others.

We have just had a lecture by the Hon. Clarence A. Buskirk. The Auditorium was crowded with attentive listeners, and I am sure good seed was sown that will grow and bear good fruit.

Lovingly yours,

MRS. ALICE C. WALKER.

Testimonies of Healing.

My first introduction to Christian Science was in April, 1904, when I was asked by a friend to read Science and Health. I obtained a copy and read one evening, and during that time a strange feeling came over me, one which it is difficult to describe. I suppose it was my first step in Science. I have read the book almost every day since, and would not be without it. I was a great smoker, and also liked the taste of liquor too well, but those habits left me almost at once and I have no desire for either. I have not missed the cigars at all and no one enjoyed a smoke more than I did. I have had hay fever for years, and suffered a great deal, but the customary attack has not returned. These benefits all came from the reading of Science and Health, and could I not get another copy, money could not buy the one I own. Too much praise cannot be given our dear Leader, who has been a channel for this truth by which all can be benefited. Words cannot express my gratitude for the help I have received.

F. D. LYONS, Minneapolis, Minn.

So many blessings have come to our family since coming into Christian Science, that I wish to give at least one recent demonstration, to express my gratitude. Some weeks ago, a stranger knocked at my schoolroom door and announced that my mother wished me to come home at once, as my little four-year-old brother had cut off his thumb in some way. School was about to close, so I left my pupils to be dismissed by another teacher and started. Upon reaching the house, about ten minutes later, I found my mother in a rocking-chair with the little fellow peacefully sleeping in her lap. It seems that he had been in the barn and tried to cut some hay in the feed-cutter. In so doing the thumb of his right hand was severed at the second joint. Mother, being alone, had quickly replaced the severed member, wrapped it in a towel, and began to work in Christian Science to destroy fear in both herself and the child. She asked what I thought about calling a surgeon to dress the hand, and then applying our understanding of Christian Science for the healing, but she quickly added that she could not bear the thought of having *materia medica* or its laws touch the child, so we decided in favor of Christian Science alone.

That night the little fellow slept over ten hours, experiencing no pain whatsoever. We took turns watching with him and holding his hand to protect it from harm. The next night we did so again and with the same result. For several days some one had to go about with him, and hold his hand, for he was so full of play that he would forget to be careful, but after the first two nights, mother found that she could hold his hand in her sleep. The healing was beautiful, there was never any pain after the first treatment. The nail continued to grow, and now the joints are perfectly supple. Only a slight scar remains, and the child uses his thumb and hand freely. Once a suggestion came to mother that perhaps she had not replaced the thumb properly, then the thought came, "I did not replace it; divine Mind did it, and could not make a mistake." From that time on fear seemed to be gone.

This is only one of many proofs that "with God all things are possible," and we are truly grateful to God, and to our beloved Leader, who has brought to us the light of Christian Science.—ALICE J. EHMEKE, Silver Creek, N. Y.

"Bless the Lord, O my soul. . . . Who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction." These beautiful words seem most fittingly to describe my experience in Christian Science, as they have literally been fulfilled and demonstrated as true in my case. A year ago at this time, I was, to human sense, in about the last stages of a most torturing disease, which seemed to be slowly wasting my mortal life away. I was unable to swallow food, either solid or liquid, without

suffering great torture and choking, so that I dreaded the thought of eating and went without food so much that I was reduced to a mere skeleton, weighing only ninety pounds; but I was kept alive through it all by "the bread which came down from heaven,"—through Christian Science treatment and the study of the Bible and our text-book, Science and Health. Now I am well, can eat naturally and comfortably anything I like; have gained twenty-five pounds, and am still gaining. Those who saw me last fall and thought I would not live through the winter are amazed at the change, and say they never saw anything like it before. They tell me they hardly know me, I look so much younger and better in every way. I am enjoying a greater sense of freedom in regard to the fear of cold, dampness, and drafts than I ever did before, and this means a great deal to me, as these things used to be my greatest bugbears.

All these blessings, and many more, too numerous to mention, have come to me through Christian Science, which gives us the understanding that God is the only Life and the only healer of all our disease. I am more grateful than words can tell for these blessings, and feel that only by living according to the requirements of this great truth can I ever prove my gratitude to God, and to His messenger, Mrs. Eddy, who so patiently and unselfishly has labored to show us the way out of selfishness and sin into the kingdom of heaven on earth.

MISS MARION L. SWIFT, Reading, Mass.

While reading the *Sentinel* a deep sense of gratitude and love came over me, and I resolved to send my testimony in the hope that it may help some one who is struggling with the dark mortal dream of error. Three years ago Christian Science found me a physical and mental wreck, trying every material means for help. I underwent an operation, which one of the best physicians in Chicago said would cure me of dyspepsia. It was the hardest struggle that I had, but after going through it all, I found that I was a worse dyspeptic than before, besides being weaker and having many additional aches and pains. After being in this physician's care for more than a year, I told him that I did not think he could cure me, and he answered, "It will be hard to do anything for you if you think that way." It was then that I began to lose faith in drugs, for the question arose in my mind, Why must I have faith in him if the drugs contain the power to heal? I struggled along for another year or more, waiting patiently for the health and strength which never came until I laid all material means aside for Christian Science. I went to a practitioner who treated me two weeks, and such a marvelous change as took place in my consciousness no words can express. I was given a feeling of peace and contentment such as the world had never given me, and I took up the cross to work out my salvation.

There are no Scientists nearer than eleven miles, but I often hear from "friends" through the *Sentinel*. Since coming into Christian Science I have discovered what true friendship is. In making demonstrations for my loved ones in the family circle I have had many a "hard fight" with fear, but I am learning that God has not given us "the spirit of fear; but of power, and of love, and of a sound mind."

I thank God that He has given us our noble Leader, through whom I have been helped to see the light in Christian Science.—HATTIE M. STAHL, Big Rock, Ill.

With a heart overflowing with thankfulness I wish to give my testimony to what Christian Science has done for me. In March, 1904, I was induced to take this treatment, after four years of semi-invalidism and finally sixteen weeks of complete invalidism under the doctor's care. During that time we consulted eight specialists and five family physicians, vainly seeking relief. My trouble was organic—a tumor—and my nerves had become so completely un-

strung that I was unable to focus my eyes, and thus was deprived of their use for four years, either for reading or sewing. In one treatment I found that I was able to read again, and in five weeks the glasses which had been prescribed and used were removed. I have used my eyes constantly ever since, for all sorts of fine work. All my other ills also vanished, in spite of the fact that I was repeatedly told that I would be an invalid for years and perhaps for life unless I submitted to a very serious operation. Having already had two minor operations performed without the slightest benefit, we were hesitating, and in despair as to what was best to do when the glad tidings of Christian Science reached us. I held off from it for some time, never having known any one who was healed, but finally I went to New York, and after a very few treatments, experienced what I have just related.

No words can express my gratitude, my joy, and deep appreciation of this glorious truth. It is indeed the truth that makes men free. Let me add my tribute of thankfulness to Mrs. Eddy.

ELLEN MATTESON DEICHMAN, Easton, Pa.

On June 27, 1902, I went with a little girl, twelve years old, to see a friend who lived ten miles from our home. We were in a cart, and drove a spirited little pony. As we were returning in the evening, the horse suddenly became unmanageable, and the frightened child, who was driving, dropped the lines and fell out of the cart, and the horse went dashing over the prairie, while I sat in the cart with one useless line lying in my lap and the other dragging on the ground beyond my reach. As night was coming on, and I momentarily expected to be thrown out, my first thought was that I would have to remain out on the prairie all night. My next thought, however, was that God would protect me and keep me from harm, and this thought destroyed all fear. When I noticed the pony again, we were in the road and on our way home, but oh, such a way as it was! All I could do was to hold to the seat of the cart and try to realize that God was near. There were several turns in the road, and once the cart wheel nearly struck a big rock; then we came to the bridge over the Missouri River, and while we were crossing, a train was just leaving the railway crossing over which we must soon pass.

When this much of the journey had been accomplished, I thanked God fervently, and hoped the worst was over. The horse was now trotting through town, and I tried to stop her by speaking kindly to her. Finding, however, that this made her run again, I just had to trust more fully in God. I had a mile farther to go, had to recross the railroad and open a gate leading into a field, before home could be reached. When we arrived at the gate it was closed, and the horse stopped a moment, then dashed off over the prairie at a terrible rate. We were now quite near a very large ditch, or canal, and I knew there was still great danger ahead. Realizing that God was my only help, I placed all my trust in Him. When the frantic animal had made three or four circles over the rough prickly pears, she went to the fence and stopped, panting fearfully. Feeling perfectly safe now, I quietly got out of the cart before any one arrived to assist me. I had ridden nearly five miles without lines! Once, on the way, I asked two men on horseback to stop my horse, but their efforts were fruitless. The owner of the horse soon came, and drove back to meet his little girl, whom he found walking home.

As I calmly walked the rest of the way home, I thanked God with all my heart for His tender care, and gratefully remembered our dear Leader for her wonderful teaching and her pure spiritual influence in the world. I also enjoyed a beautiful realization of the grandeur and holiness of Christian Science. Had this experience occurred when

I was in the old thought, before I knew anything of Science, I am sure I would have fainted from fear and nervousness, and in all probability I would have fallen out of the cart, but the daily study of Science and Health had taught me that divine Love is everywhere, and therefore I was preserved from fear and its attendant danger.

MRS. DAISY DOYLE CARPENTER, Toston, Mont.

Less than a year ago, when nothing but trouble seemed to encompass me, I was led to Christian Science. My mother's copy of Science and Health was always lying on the table, but I scarcely ever read it. One day, however, the mental conflict was so great I commenced reading in the hope of obtaining peace. Every day since then my companions have been the Bible and Science and Health. At that time I had a very serious eruption on my face, which had been there two years. We had consulted several physicians, and used every remedy suggested to eradicate it, but they proved useless. I had given up all hopes of its ever being healed, as the physician we last consulted, pronounced it tuberculosis of the skin, and incurable. A few weeks after I commenced reading, I was amazed to see it almost healed over, and to-day my cheek is perfectly smooth, while the scar is disappearing.

In April my baby was born with only the practitioner and a lady friend present. I suffered scarcely any pain, and the third day I went down-stairs. I am able to nurse him,—a privilege of which I was deprived with my first child. He is a picture of health, having never been sick a day since he was born.

It would be impossible to express the love and gratitude I feel for Mrs. Eddy, through whose unselfishness we are enabled to enjoy these blessings. I have not the advantage of a church here, but we read the Lesson-Sermon every day, and are striving to follow nearer and nearer in the footsteps of our Lord and Master, Christ Jesus.

KEFA E. W. LAURESON, Mt. Dora, Fla.

I wish to express my gratitude to God for the peace and happiness which have come into my life in the last few years, through Christian Science. During this time I have been healed of a quick temper and a spirit of criticism, as well as of many physical ills. With the understanding I have gained I have been able to face a severe trial without fear as to the future, knowing that divine Love would take care of me and that there could be no lack in God's provision for His children. How grateful I was at that time for my little volume of Science and Health by Mrs. Eddy. It was my ever-present solace, teaching me to lean on God alone for my support. How I wished that all who have any trouble to meet could have the same help that I received in my hour of need. I felt no worry, no sadness, simply a calm reliance on God. I wish to express my profound love and gratitude for this revelation of Truth which opens up the Bible, a book that was hitherto a blank to me.

ALICE E. CRANE, Somerville, Mass.

It has long been in my thought to say a word of loving gratitude for what Christian Science has done for me. I was afflicted for twenty years with what doctors called chronic liver complaint, nervous dyspepsia, and female trouble. I was treated by several eminent physicians, without receiving any permanent relief; I also wore a galvanic-electric belt and used different kinds of medicine, which were of no lasting benefit. I was so nervous much of the time that I could not sleep. In 1895 a lady friend of mine, who had not walked for seven years, was being treated by Christian Science, and she improved so fast that I was induced to try it myself. I learned through her that the healing was from God, and that made me more anxious for it, as I had much faith in God; but I did not know how to exercise this faith until I came into Christian Science, and I had lost all faith in material remedies. Although my healing was not in-

stantaneous, my health gradually grew better, through Christian Science treatment. I have had to ask for help on different occasions since I was first healed through the truth, but since coming into a better understanding of Christian Science I am able to help myself and others. I have not taken a dose of medicine in nine years. I used to make a god of medicine, and the Scripture says, "Thou shalt have no other gods before me." In this Science I have learned that God is an ever-present physician, the truth an ever-present remedy.

My heart goes out in gratitude to Mrs. Eddy for the work that she has done, and is still doing for the world, and I am more than grateful to God, who has guided me to this truth. I hope that these few words may help to lift some one out of the bondage of sickness and sin "into the glorious liberty of the children of God."

MRS. L. D. BELL, Olton, Tex.

I feel that if I should withhold my testimony any longer the very stones would cry out. Four years ago I became interested in Christian Science through the healing of my wife. She had been suffering from different diseases for about five years, when she took Christian Science treatment for a week and was healed, after all kinds of medicines had failed. I had given my consent for her to try this Science, not because I believed in it but because I wanted her to be cured, and after I had the proof I wanted to know the Principle. A Scientist handed me a tract on Christian Science which I read eagerly. I was impressed by its thought. I began to realize that God is my Life, and every time I declared it, I felt a sense of being lifted up, and a greater sense of freedom. After declaring the truth for about a week, a chronic case of varicocele, of five years' standing, had disappeared, and I had a sense of the power of divine Love, that heals all our diseases, and gives us *now* a taste of heaven, harmony; that passes all understanding. After I became interested in Christian Science I bought a copy of Science and Health, and I have found it the best investment I ever made. I have almost hourly proofs that there are no flaws in Christian Science, that every statement contained in Science and Health is true and can be proven.

I am thankful for all our periodicals, and yet more for our Leader, who has shown us the way by which we may follow closely in the footsteps of our Master, the great Way-shower.—HENRY R. HALL, Jacksonville, Ill.

For seven years before coming into Christian Science I was a member of an orthodox church. I used to read the Bible and get some help from it, but now I can see how little of it I understood at that time. I occasionally heard of Christian Science through friends in another city, and felt that it was right. They loaned me a copy of *The Christian Science Journal* which they had, although they were not Scientists. I wished to know more of this subject, but did not know how to gain the desired knowledge. However, God was leading me, for in June, 1903, after reading in the daily paper of the Communion at The Mother Church, the determination was formed to learn something of this religion which healed both sickness and sin. The paper told of people who were healed by reading Science and Health, and this seemed very wonderful. Knowing that there was a Reading Room in the city, I went there to buy a *Journal*. The lady in charge was an acquaintance, and she invited me to attend the church services. For ten years I had worn glasses for weak eyes; they were always necessary when reading, sewing, or riding, or when the eyes were tired. The second Sunday that I attended church, the glasses were worn, and during the reading of the Lesson-Sermon, my eyes feeling rested, I removed the glasses and carried them home in my hand. It was not until Wednesday that I noticed the glasses had been reposing in their case since Sunday; and although I had never heard of healing at a church service, I knew that my eyes were strengthened and cured. This seemed a great proof of divine Love,

and gave me a greater desire to learn more of the truth. I bought a copy of Science and Health and have been a constant student since.

All my life I had not been strong, and had taken much medicine. Later I took up the study of physical culture and hygiene, and became a teacher of these branches. I believed that this was helping humanity, but while it seemed to benefit me somewhat, it was not satisfactory, and I know now that it was spiritual help which was needed. I used to be discouraged, have the "blues," and not care whether I lived or died; now, these conditions seldom are felt and much more strength is realized. After being bound by the supposed laws of hygiene what a glorious uplifting is felt when we realize our freedom as children of God! Of course it was a struggle to overcome the material beliefs of gaining health by diet and exercise, but the results are well worth the battle. Since studying Science and Health, I have had many demonstrations of the power of Truth over error, and I am also able to help others. It is beautiful to know we can apply our religion to every problem in daily life.

One day, while playing with a dog, he became rough and bit into my thumb and forefinger. I felt it at the time, but no pain followed; however, when I entered the house I noticed that the flesh on the joint of the finger was torn and bleeding. Washing off the blood, I denied the error, but did no further work. In the night I awoke with a sense of pain in the wound, which seemed to extend to the tip of the finger. Knowing the mortal mind law regarding the bite of a dog, fear manifested itself. Without looking at the finger, I took Science and Health and began to read. In half an hour I realized that, as my life was indestructible, neither dog-bites nor anything else had power to injure it. The fear was entirely gone, and the finger healed quickly.

Each demonstration, whether over sin or disease, brings such a sweet sense of divine Love and of peace that I am more grateful to God every day for this blessed truth. I am also grateful to our dear Leader for her great faithfulness and courage in teaching us what was revealed to her.

C. LOUISE RICHARDSON, Woburn, Mass.

Six years ago Christian Science healed me of a disease which I had had for a long time and for which I was taking medicine daily. Many times since then, I have been enabled to make demonstrations in my home. I have a little daughter, two and a half years of age, and have seen her various ailments disappear in a very short time. The assurance and peace that comes with each of these victories, however small it may be, is untold. What a blessing it is to know that these little ones in Christian Science have divine Love to instruct and guide them.

Recently, with the aid of a dear practitioner, a demonstration over a severe burn was made. Had my very first thought not been a declaration of truth, I am sure I would have been overcome with the intensity of the pain, but within an hour after treatment was taken up, the pain was so nearly gone that I went to sleep and slept soundly all night. The next day I was able to perform my household duties as usual. This demonstration was, to those who were present when the accident occurred, a beautiful and positive proof of the allness of God and that He is a present help. My gratitude to our beloved Leader, for giving to us this practical Science, is indeed very great, and my prayer is that I may so live what I profess that I may truly be worthy the name a Christian Scientist.

MRS. MABELLE N. SCOBAY, Chicago, Ill.

I never was happy under material conditions. Errors from which I knew no deliverance brought me much misery, but since coming into Christian Science these have partially disappeared and I am much happier. Soon after taking up the study of Christian Science I was healed in a day of that malady, the grip. Since then I have recovered

from the disease in a few hours by applying the same remedy. I was only under Christian Science treatment a few months when I was cured of a deformity in both hands. Since then I was treated for a sprain in all four fingers of my right hand, and in four days I could bear my own weight on that hand without experiencing any pain or stiffness in the fingers. My breathing was always weak, but now I can go up long flights of stairs without being disturbed. During the last four years, prior to coming into Christian Science, my vocal organs were slightly paralyzed, and it was difficult for me to talk intelligibly, but now I can talk so that nearly all of my words are understood.

For all these benefits, and more, I give thanks to Christian Science, and its Discoverer, Mrs. Eddy.

HARRY J. STILLSON, Battle Creek, Mich.

It is with a deep sense of gratitude that I acknowledge the healing, through Christian Science, of my dear mother, who is in her eighty-sixth year. A few months ago she experienced a sudden stroke of paralysis. Our physician told me nothing could be done, that it was a matter of only a few hours. She was laid on the bed and I was told not to disturb her. It was then I turned to Christian Science for help, and telephoned to Pittsburg, Pa., for the practitioner whom I knew, and she answered that she would come. From the time I telephoned I saw a change in my mother's condition. The healing has been gradual, but words cannot express my happiness in saying that my mother is now enjoying good health. There is no appearance of the paralysis,—she has free use of her hands and limbs, and has a sweet, natural look. Her speech and memory are as they were; even better. She rides out almost every good day. We can see daily improvement. Her case is one which amazes our friends and neighbors; it has brought others to think of Christian Science. My mother had for years one large wart on her nose and two on her fingers, but during treatment they dropped off, leaving the skin clear and natural. She is bright and cheerful, and every day I am more grateful for this healing and for the spiritual uplifting that has come to us from the study of Science and Health. Words fail me when I try to express my gratitude to God, and to dear Mrs. Eddy for this truth.

JENNIE S. KERR, Monongahela City, Pa.

I wish to express my gratitude to God for the many blessings which have come to me during the past two years. For eight or nine years I possessed a copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, and after two or three unsuccessful attempts to read the book, I laid it aside, thinking no more about it until two years ago. The healing of my brother-in-law of alcoholism and other troubles brought such peace and joy to us, that I began to read and get a little understanding of what Christian Science means. For four years I had worn glasses for astigmatism, and one day, while reading in our text-book, I felt impelled to remove my glasses, and I have not worn them since. To read or sew without them used to cause severe nervous headaches, to which I became a prey. I have had but one headache in the two years, being able to overcome them in the beginning; also bronchial colds, which were quite severe every winter. I had one bad sore throat last winter and that was healed instantaneously. I have also been healed of fistula ulcers in about ten days, after having suffered all one summer; but I am more thankful for the spiritual healing and a better understanding of how to live aright.

My slight understanding has been a great help to me in my business and daily living. I am very thankful to our Leader, Mrs. Eddy, for the good work she has done and is doing for the benefit of mankind. My desire is to live and serve God to the best of my understanding.

GRACE G. LONG, Boston, Mass.

From our Exchanges.

Let us not believe that God exhausted Himself in that primal time, but rather that He is as near us as to Aaron and Joshua, Isaiah, Jeremiah, or the twelve. If any would convince us that our lives are less mysterious and awful than any in the past; that God loves us less, or can come less intimately to us; that our being is less sacred; that Christ walked through other cities and beside other seas and lakes in a land holier than ours, but is not to be found here, let us not believe him. This is to make the Christ a legend more successfully than did Strauss. This is to dis sever us from the energy, wisdom, and love of the universe. This is to leave us orphaned, praying to our Father and mocked by our own echoes.—*Western Christian Advocate*.

If one is concerned about religion, and believes religion to be a most potent force for good in human affairs, it is his business to teach the world the reason why he should believe in God. This is the most tremendous question of both philosophy and religion. If we want a solid, permanent revival of religion, we must first make present to the intellect of intelligent men the existence of God. If we can make people see and believe that such a God there is, then we have the fulcrum and the lever which religion requires.—*The Independent*.

To expect to reach God only at the end of long study and much work implies that He is a mysterious somewhat, hidden in a corner of the universe, or at best an architect who has no living connection with his work. But not so: God is an omnipresent Father, a pervading, uplifting Presence. So far from having to wait till we reach our goal in order to know Him, or to take long journeys of thought in order to find Him, He is the Life and the Love that will go with us on our way if we but open our hearts to Him.

The Christian Register.

The professing Christian who violates the law of Christ in his daily life, who is penurious when he should be generous, hates when he should love, destroys when he should save, has a way of quieting his conscience by exceeding strenuousness in matters of ceremony and belief. Thus it happens that the Pharisee appears in all lands and in every age. He is about as much in evidence to-day as he was when Jesus walked upon the earth and denounced him to his face.—*The Standard*.

Our spiritual nature grows by means of the acts of usefulness in which we engage from the love of doing good. If, then, we sincerely love others and desire to fill a sphere of usefulness in the world, our desire to do good will become a spiritual hunger, the gratification of which will give us far more delight than any mere bodily pleasure.

REV. JOHN S. SANE.
New Church Messenger.

The truly religious man must be hopeful and cheerful, for he believes in final good, and that the powers of the universe are with him in every upward aspiration. He is fearless in his mighty trust. He dares to enjoy all that life may bring. He is strong in adversity, feeling that a conscience void of offence is the greatest of possessions.

The Pacific Unitarian.

Because of the general acceptance of the great cardinal truths of Christianity, it is now becoming apparent that many of the divisions between Christian people are unreasonable, unwholesome, and hence undesirable.

Pacific Christian Advocate.

Pietism may come from the rigmarole of conventionality, but spiritual greatness demands that we strip worship of its verbiage, and strip the heart of all masks.

The Universalist Leader.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRISTIAN SCIENCE. The Religion of Jesus Christ. By the Hon. WILLIAM G. EWING of Chicago, Ill.

CHRISTIAN SCIENCE. Its Worth and Work. By Rev. ARTHUR R. VOSBURGH of Rochester, N. Y.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid . . 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

On the 5th, on board the yacht Mayflower in Oyster Bay, Long Island, President Roosevelt completed his high task of bringing together representatives appointed by Japan and Russia to treat for peace. A little before twelve o'clock the President left his summer home at Sagamore Hill and took a launch for the Mayflower lying at anchor in the harbor. Half an hour later the Japanese, who had arrived on board the Tacoma from New York, boarded the Mayflower and were received by the President. A little after one o'clock the Russians, who had been brought from New York on board the Chattanooga, came alongside and were received. Shortly after this greeting the two groups of envoys were presented to each other. To relieve any possible strain in the meeting the President very soon suggested that they all repair to the luncheon awaiting them in the cabin. During this function the President said: "It is my most earnest hope and prayer, in the interest of not only these two great Powers, but all mankind, that a just and lasting peace may speedily be concluded between them."

President Roosevelt soon left the Mayflower, after shaking hands with all, and returned to his home. Later the Japanese were taken to the Dolphin, the Russians remaining on board the Mayflower. About five o'clock these two vessels, convoyed by the Galveston, weighed anchor and proceeded slowly for the Portsmouth Navy Yard, where the conference is to take place. The party was expected to reach Portsmouth Monday morning, but fog in Newport delayed progress and the functions arranged for that day, receptions by the Navy Yard officials and the Governor of New Hampshire, had to be postponed a day.

The executive committee of the Isthmian Canal Commission has practically decided to suspend attempts at digging the canal until better preparation for the work has been made. By paying the laborers in a regular, systematic manner it is believed that the present disorganization will be overcome. Governor Magoon has informed the Government of Panama that the Canal Commission

has decided to establish commissariat stations for the supply of food, etc., for canal laborers along the zone, excluding Panama and Colon. Until now the United States has refrained from doing so on account of the protests of Colon and Panama merchants, but reports to Governor Magoon state that laborers cannot buy what they need in many instances, and for this reason are refusing to work. Refrigerators will be installed, and the railroad and steamers will import food from the United States.

The American representative in a northern European capital was recently forced to seek information from the British Ambassador in order to carry out instructions from our State Department. The late Secretary of State, Mr. Hay, learning of this, directed that plans be prepared for adequate communication, which would embrace full advices, being given to Ambassadors and Ministers concerning pending international questions, and reciprocal advices from them to Washington. The need of this has long been apparent, as American representatives in Europe seldom are apprised of the status of affairs in which they are obliged to act, whereas the British, German, and French Ambassadors are always kept informed on all questions affecting their Governments.

Arrangements have been made with the Governments of Bavaria, Saxony, and Switzerland, and the municipal authorities of Frankfurt and Nuremberg, through Professor Francke of Harvard, for important gifts to the Germanic Museum at Cambridge, should accommodations sufficient for them be provided. Included in the gifts probably will be a cast of the memorial slab and the accessory structure of Emperor Louis IV., "the Bavarian," and reproductions of Goethe's room at Frankfurt and of the house of Albrecht Duerer at Nuremberg, a chancel of a thirteenth-century church at Wechselsburg, Saxony, and a sepulchral monument at La Sarrez, Switzerland.

Information has come to the Administration that Wu Ting-fang, the former Chinese minister to the United States, has been put in sole charge of the negotiations looking to the renewal of the exclusion treaty between this country and China. His authority is reported to be direct from the throne. It has been previously intimated in despatches from the East that Wu Ting-fang was behind the present boycott movement.

The chairman of the presidential committee, which has been making a very searching inquiry into the affairs of the Government Printing Office, has completed his report. The general understanding is that a new public printer will be selected very shortly, and that other changes in the offices will occur as a result of the inquiry.

President Roosevelt, after a long conference, has declined to accept the resignation of George R. Carter, Governor of Hawaii.

Foreign.

The Madrid correspondent of the *Daily Mail* says that it has been decided to hold the Morocco International Conference at Madrid the beginning of November.

Industrial and Commercial.

A company is reported to be forming to acquire nineteen of the leading street car building companies in the United States and organize a new company with a capital of \$43,000,000. The company will acquire many valuable patents and patent rights, and by the control of these patents will avoid considerable litigation that has troubled the constituent companies.

At the recent meeting of the California Raisin Growers' Company the proposition submitted by the directors of forming a joint stock company with the packers was indorsed by a vote of 8,647 to 3,101, each vote representing one acre. The new concern is to be known as the Central California Raisin Packing Company. It is to be controlled equally by the growers and the packers, the balance of power to be held by a

neutral director. The packers are to get \$5 a ton for selling the crop, and they are assured of forty thousand tons.

It is reported that there will be a shortage of seven million pounds in the tea crop of Japan for 1905, as compared with that of last year, but the quality is away ahead of last year's crop, which was injured by heavy rains. Fully 43,000,000 pounds were imported into the United States this year from Japan and 17,000,000 pounds from Formosa, out of the total of about 90,000,000 pounds that was consumed in this country.

The Southern Peanut Company of Paducah, Ky., which has been engaged in raising large quantities of peanuts in the western portion of that State, is said to be preparing to ship a trainload of fifteen cars of this product to Philadelphia, representing the largest single shipment of peanuts ever made in the United States.

The cable ship Colonia recently sailed with 2,400 miles of cable to lay the Commercial Cable Company's additional line from Waterville, Ire., to Canso, N. S., and thence to Newfoundland.

The winter wheat yield for Nebraska will amount, according to conservative estimates, to fifty million bushels.

California produces more dollars' worth of oranges than of gold—oranges over \$18,000,000 and gold \$17,000,000.

General.

According to consular reports, a company has recently been formed in British Columbia to manufacture a toredo-proof pile covering, an invention of a resident there. A pile covered with this material was placed in a very exposed position on the water front three years ago and remains as perfect as when it was first driven, while the piles that have not been treated, and which surround it, are honeycombed by the toredo's work. It is said that a coating is not subject to corrosion like copper covering and costs about one-third as much. It cannot be diluted or washed out by sea water, as invariably happens with paint and carbolic washes.

The foreign trade of China during the calendar year 1904 aggregated 583,000,000 haikwan taels, as against 541,000,000 for the year 1903, according to the annual publication of the Chinese customs authorities. (A haikwan tael is equal to \$1.01.) The principal countries participating in the commerce of China are Hong Kong, 228,000,000; Japan and Formosa, 88,000,000; Great Britain, 72,500,000; Russia about 9,500,000; the rest of Europe, 68,000,000; the United States, 56,250,000; India, 34,666,000.

A party of Government astronomers, consisting of Professor G. A. Hill, assistant astronomer of the Naval Observatory; Professor E. J. Yowell and J. A. Andrews of the Naval Observatory; Dr. N. E. Gilbert and Dr. L. E. Jewel, in charge of Captain J. A. Norris of the United States Navy, has sailed on the cruiser Dixie for Algiers for the purpose of observing there the total eclipse of the sun on August 30.

In this year's exhibition of the Chicago Municipal Art League are nine landscapes painted by William A. Harper, the Art Institute's negro janitor. He comes from Houston, Texas, where he taught drawing in the public schools. Saving his money, he got a brief season of study in Europe. He is still saving his money and still studying. The Chicago artists are said to take a great interest in him.

An express train which makes no stop between London and Liverpool has been introduced by the London and Northwestern Railway Company. The 201 miles are covered in 208 minutes.

Soil brought from a depth of 326 feet in one of the Belgian coal mines is said to have grown weeds unknown to botanists.

From our Contributors.

Evil without Excuse.

SAMUEL GREENWOOD.

THOSE who have advanced the theory that evil is "undeveloped good," or that it is "good in the making," have not enlightened us as to the probable time required to complete the process. Sixty centuries have already been recorded since evil, according to popular belief, began its dominion over mankind. The number may be six hundred, and yet there has been no discernible change for the better in the original product. Imagination might continue with the course of evil to the end of time without detecting the first sign that hate could evolve a single grain of love, or that venomous envy could transform itself into sweet charity. There is no case on record of an individual's becoming righteous by any other means than the forsaking of sin, and this leaves mortals scant ground for expectation that they can ever gain goodness in any other way.

While the proposition that evil is a sort of spiritual protoplasm out of which good is eventually made, is much too grotesque to be taken seriously, it illustrates the shifts mortals make in finding excuses for the existence of evil. No apology that has ever been offered has lessened the vileness of its nature, nor made of it anything better than it is, the would-be destroyer of man's godlikeness. To have repudiated it in the first instance, in the name of the infinite creator, had been wise and true; but to associate its introduction into human experience with the name of God, who made all things good, is the extreme of blasphemy.

The ancient traditions regarding creation, which human enlightenment has discarded, are quite as reasonable as the alleged metamorphosis of an angel into a devil. Yet those who would resent the former as an insult to their intelligence will advance the latter belief in all seriousness, notwithstanding its implication of God in the subsequent perpetration of evil upon mankind. Every good quality in human nature recoils from the belief that God permitted His children to be victimized by a demon, and then turned over their descendants to its diabolical rule. The human father who did thus with his children would be abhorred by his fellows, a fact which should effectually blot out the charge of God's participation in the supposed advent of evil.

To excuse evil on the assumption that God has permitted it, is an evasion of the claims of righteousness, whose tendency, when aggressively maintained, is towards the commission of crime. There can be no more excuse for the presence of evil in the universe than there is in an individual. A good man who allowed evil to enter his consciousness would cease thereupon to be a good man. And likewise God must cease to be wholly good if evil were permitted a place in the Divine consciousness and creation. These are self-evident truths which only an ultra-materialist would consider open to controversy. Evil is thus excluded from the true idea of God and of man, and must take refuge in falsity, a false idea of God and of man; and we can find it nowhere else. Its claim to be the truth is no more than the claim

that any lie makes to be true, but which no one admits who knows the facts.

The Christian Science teaching that evil has no right to exist, and has no excuse for its action, is practically sustained by the law of the land, although the legal definition of evil does not include all that is implied in that term. The laws of every civilized country declare to the individual citizen that he must not allow evil, as defined and specified by the law, to operate through him. He may theorize as he pleases as to its supposed origin and existence, but so far as the law is concerned he is called upon to act as if there were no evil. Criminals are punished for making evil a reality and a power, while the law demands in substance that they deny it. The truth behind all criminal codes is that the consenting to evil, instead of its denial, is the beginning of transgression, the door through which evil enters and controls the individual thought and will. Thus, in order to obey even human law one must repudiate evil so far as its practice is concerned, a fact which should justify the wisdom of rejecting it in theory as well. To escape the punishment for certain transgressions, an individual must deport himself towards these specified evils as if they were non-existent. The court will not accept the plea that any form of evil under the ban of the law is too strong for him, for the basis of the rulings in every court of justice is man's ability to resist evil,—to make it unreal to himself. Thus the evil of which the law takes cognizance stands in every civil court of Christendom without an excuse, absolutely without any authority for its existence or its supposed control over mortals. Shall theologians and religious teachers be more lenient toward this arch-enemy of mankind by admitting its plea of reality and power and by finding excuses for its existence? Shall they virtually abet the criminal and the sinner by arguing for the impracticability of treating evil as if it were not true? Every time one resists the temptation to sin he does this very thing, and both law and gospel sustain him in so doing. How then can Christian Science be justly criticised for applying the truth, as accepted in law, to the whole question instead of to a part of it, and declaring evil in every instance and from first to last an unreality, a monstrous lie against the omnipotence and omnipresence of God? That which should not be practised should not exist, and it does not exist in the perfect idea of being.

Evil can be a possibility and a power only to the evil-doer, since there is nothing in a good man to respond to it. The covetous longing for the things of another appeals to dishonesty, but it has no existence in, nor can it enter, the honest thought. There is nothing in love of a kindred nature to malice and hatred, and hence in the loving heart these evil conditions are not permitted. In such a case evil has proved itself impossible, even as darkness, its prototype, has no possible place in light. Whatever evil may seem to accomplish in an erroneous sense of man, it cannot contaminate good. Honesty cannot be corrupted nor purity defiled, since God is the preserver of these. His own qualities, in man. It is always the opposites of these which recognize and respond to temptation. Men know that so long as they retain their thoughts pure and honest it is impossible for them to sin. This conviction is not the result of any belief, but is an intuitive consciousness of man's divine origin, which separates him from evil. Thus evil in

every instance is thrown back upon itself for recognition and belief.

That evil is the negation of truth, or that a bad man is the reverse of what a man should be, is recognized in our courts of law; and the law moreover insists that this theory, so far as its definition of evil is concerned, is not only practical but must be practised. The fact that man can resist evil, can refuse its control, and keep it out of his life altogether, proves evil to be an absolute nonentity apart from human belief. Christian Science teaches nothing regarding evil that may not be substantiated in every individual's experience. In recognizing it only as a temporary human error, a mistaken sense of being that can be corrected and destroyed, all that belongs to it is admitted. The demonstrations of the unreality of various forms of evil, which students of Christian Science have been able to give, on the basis of its teaching that God, good, is all, point to the ultimate awakening of mankind to this great truth. It may be difficult for mortals, while influenced by material evidence, to accept the statement of the unreality of evil, but this will become apparent to each individual as he ceases to obey it.

Christian Science in Business.

ISIDOR JACOBS.

THOSE investigating Christian Science sometimes ask whether the application of its teaching to business and finance, which are material, is not making an improper or selfish use of its sacred law. That which elevates and improves does not lend itself to a selfish motive, but the teachings of Christian Science, when understood and rightly applied, bring about a higher standard of commercial morality, even though the immediate object of business and financial affairs is the gaining of material wealth.

A higher standard of commercial honor brings with it a more lasting and more substantial sense of wealth. The Scriptures tell us that when Solomon prayed to God he asked only for wisdom; but all earthly possessions were granted unto him as well. Wisdom brought with it the knowledge that divine Love supplies all our needs. Christian Science demonstrates to us, in business and finance, that when we acquire understanding we realize that divine Principle must govern our actions, and as we acquire spiritual knowledge, our worldly prosperity comes with it, success crowning our efforts in the right direction. The road is frequently long, narrow, and rough, but understanding brings with it patience, perseverance, and determination in the right. In all Christian Science demonstrations the material sense of self must be put into the background,—must give way to the spiritual.

Some business men think results must be as they wish. They want things to come about their way and they work from that standpoint. Business cannot be permanently successful on these lines. Business and financial matters can only be handled from the knowledge that divine Mind governs. There must be implicit reliance on Truth, and when this becomes fixed in our consciousness, fear and worry give way to confidence, and confidence, which is based on the operation of divine Principle, brings character and ability, and these bring success. The writer has seen so many successful business and financial demonstrations through Christian Science that he could not doubt if he would. In the course of his business experience he has come into contact with so many men who have evolved success out of failure by the proper application of the teachings of Christian Science, that its rapid spread among mercantile men does not seem surprising. It is the only force in business circles which successfully defeats hypnotic or mesmeric influence. There is no error more necessary to combat than the subtle tendency to influence the actions of another by these means. The "Rule for Motives and Acts" (Church

Manual, p. 56) teaches us the importance of daily watchfulness and prayer. If every business man, whether interested in Christian Science or not, had this rule always fixed in his mind, and made it his rule for motives and acts, what vast and marked results we would see in the commercial world. We would then understand how necessary it is to overcome mesmerism or hypnotism in ourselves. To allow fear and worry to influence our actions is one of the worst forms of mesmerism, and results in much of the disaster and misfortune we find in the business and financial world.

Many people, in their enthusiasm over the benefits received in Christian Science, allow their sympathy to influence them to help others in business matters, without looking fully into their capabilities, etc. This is but a form of mesmerism. We should look into business propositions or investments from a business standpoint, and we must guard against allowing personal considerations, or the desire to help a brother Scientist in business, to influence our actions. Business and financial transactions must be looked at from the standpoint of Principle rather than sentiment.

Christian Science teaches that divine Mind is the source and foundation of all being, hence the only reality. All the ills from which we suffer, whether in business or in our physical condition, are purely mental, and we will get relief only as we are able to demonstrate that Truth and Love guide our actions. It is frequently asserted that the commercial code of ethics is on a very low basis, so far as business honor is concerned. To-day, however, Christian Science is having a vast influence for good. It is bringing out in thought as well as in deed the Golden Rule, "Do unto others as ye would that they should do unto you." This is resulting in success where before was failure. Competition in business may be ever so keen, yet when Christian Science is understood, instead of competition making enemies and resulting in losses to all, the thought "Love thy neighbor as thyself" results in our losing our enemies. We have enemies only so long as we permit them to exist in our consciousness.

As a result of the rapid spread of this truth among business men, those known as Christian Scientists are frequently singled out, and their acts should at all times stand as a credit to their community, an honor to the Cause. Only success can result from the understanding and the proper application of the truths taught in Christian Science. These truths applied to business and finance are proven by results to be practical common-sense. We see the co-relation between business or financial demonstrations and physical demonstrations. A sick physical condition frequently evolves a sick business condition, and *vice versa*. This is purely a state of the human mind, and Christian Science alone holds the solution of the difficulty, changing poverty into prosperity, sickness into health, sorrow into joy, and death into life. On all sides we find successful business men giving Christian Science the credit for their prosperity and happiness, for in acquiring an understanding of its teaching they receive the wisdom which results in the increase of human good. When fear, worry, and their many concomitants are driven forth, the Christian Scientist in the business and financial world can rest secure, with confidence in the operation of divine Principle, and harmony and success is thus assured. He then looks business problems squarely in the face, if they arise. He does not shirk his duty, but when he meets error in any form he recognizes it for what it is, and puts it behind him.

Christian Science brings us to Principle, and teaches us that when divine Mind guides our every motive and act, success is certain. Words cannot begin to express the debt of gratitude due to Mrs. Eddy for giving the world the understanding of this truth which makes men free, and which is to-day leading the race to a higher civilization, not only in elevating the standard of commercial morality, but in bettering every phase and sphere of human existence.

What is Obedience?

JAMES B. MERRITT.

UNQUESTIONABLY the greatest theme presented in the sacred writings is that of love, but closely allied to this is the thought of obedience; indeed, the one without the other is impossible of manifestation. Jesus said, "If a man love me, he will keep my words," so obedience was to be the proof of love; and he said further, "My Father will love him, and we will come unto him, and make our abode with him," thus promising the sweet presence and consciousness of Love as a reward for keeping his sayings.

Unless we are daily striving to live in obedience to the demands of Truth and Love, it is obvious that we cannot be in any measure of harmony therewith. We shall bear no good fruit unless we abide in the vine. "The Son can do nothing of himself, but what he seeth the Father doing" (Rev. Ver.), and if we are seeing through a glass darkly, because of our lack of love and obedience, which would dispel the clouds of sense, although the Father's work is forever being done, and His kingdom is continually coming, we can have no part in its manifestation. If we would have our part in bringing about the world's at-one-ment with Truth and Love, we must press along the same pathway as has our beloved Leader, Mrs. Eddy, and in loving devotion to the same Principle, we must look beyond all personal sense and discern the true Saviour, the spiritual life-link between God and humanity.

What folly it would be for any army, no matter how strong it were numerically, to go into battle even with a weak foe, if each soldier had his own ideas of how the fight should be conducted, what sort of weapon he should use, and should insist on attacking the enemy whenever and wherever there seemed a chance to strike a blow, regardless of what his comrades were doing or what the commander saw was the wisest course to pursue. Such an army would ultimately be destroyed.

Suppose that all the energy which has been expended in alleged Christian effort had been intelligently directed against the common foe, following the lead of the great Captain, who has given us explicit directions and every assurance of victory if we but obey his commands. The only weapon that can possibly be of use to us in this warfare is "the sword of the Spirit, which is the word of God." Thus directed and thus armed, we would be able to withstand all the thrusts of error, and turn it back to its own destruction.

The warfare that Jesus inaugurated has no element of hatred in it, and nothing in the right direction has ever been or ever will be accomplished by using the weapons of invective and persecution. The suppositional forces of evil had all the world's weapons, but Roman sword and rabbinical malice, alike, were powerless when matched against divine Love, as reflected by the Master.

God always has led His people wisely, and the experience of the ages has shown that so long as they followed in loving obedience, peace and plenty attended their way; but when they deviated therefrom, failure invariably followed. Moses was directed to simply speak to the rock the word of Truth that should supply the need of water, but instead he upbraided the people for their murmurings and angrily smote the rock with his rod. God did not punish the people for that which was no fault of theirs by withholding His blessing and prolonging their thirst, but He did punish Moses and Aaron for their disobedience; they were not permitted to enter the promised land. The Scriptures throughout teem with promises of blessing in reward for obedience, as well as warnings of punishment that must surely follow our failure to heed the demands of Truth and Love.

In listening to the dictates of the personal senses, we close the door to the utterances of Truth and find that we are not entertaining the angels of His presence, but deceitful

sirens whose alluring songs of pleasure in materiality lead us away from the right path; and thus we have to learn our lessons over and over again, until we grow into that understanding which hears and heeds only the true voice and intuitively discerns and follows the heaven-bound way.

Having received so many blessings from Christian Science, we can but feel a deep sense of obligation to our Leader and Teacher, Mrs. Eddy, for the wonderful light and joy that has come into our lives as the result of her opening to us the Scriptures. We can only hope to make recompense in some measure by following as closely as we are able in the way she has shown us, thus giving her assurance that she has not labored in vain. The deepest and most reverent love of which we are capable is hers by right, and unbounded is our gratitude to God for a life so pure and an aim so high as to trace thus closely the footsteps of Jesus the Master.

The apostle Ignatius, in his epistle to the Ephesians, writes, "It is good to teach, if what one says, he does likewise. Let us therefore do all things as becomes those who have God dwelling in them, that we may be His temples, and He may be our God." It was this proving of their words that crowned the lives of Jesus and his apostles with success and glory, and it is the same demonstration of spiritual understanding that has made the influence of one humble, God-fearing woman so potent in the lives of hundreds and thousands of people in this present time. Is it wonderful that we, as Christian Scientists, should confidently follow a Leader who has shown us the way out of so much suffering and falsity, and is ever pointing us away from personality, away from every human model to the Divine ideal,—the only goal worth striving for?

The truly obedient never judge their fellow-men according to human standards, nor cast unchristian reflections upon the work of their fellows, but in righteousness they judge their own errors and endeavor to remove them.

We can follow only so far as we apprehend. Obviously, then, the only obedience we can show is to walk as nearly as possible in the way of Truth, and by a life full of love and good works study to show ourselves "approved unto God." Our obedience must be natural and spontaneous, not forced or perfunctory. It must be a constantly flowing stream,—a living fountain of love.

Gratitude.

DOROTHY S. STEWART.

CAN we ever be grateful enough for the blessings we have received in Christian Science? We think we are grateful when we thank God, but do we praise Him by loving our neighbor as ourselves, and by relinquishing error for truth? Are we grateful enough to our beloved Leader for her unceasing prayer and years of labor in our behalf? We think we are grateful when we speak of her in loving terms, but do we thank her by endeavoring to live up to her teachings to the best of our ability? We are transformed from helpless sufferers to strong and healthy men and women; yet, sad to relate, some of us take our reformation for granted. We can never hope to receive benefits unless we deserve them; we can never deserve them if we deny Christ. "Whosoever shall deny me before men, him I will also deny before my Father which is in heaven." Faith and works can move mountains, but either one alone is like the boat with but one oar. Think what we would be without this great truth—rudderless ships on the sea of error, dashing against the rocks of despair. Let us therefore show our gratitude in glorifying God by walking "in the paths of righteousness," as taught us in Christian Science.

It is by doing always and everywhere the best we know, that doing becomes the natural, easy, and pleasant habit, and character is formed. . . . Exactness in little duties is a wonderful source of cheerfulness.—FREDERICK W. FABER.

Selected Articles.

A True Word.

There may be cranks among these Scientists, as in every religious sect, but it is by no means made up of cranks, for some of the most prominent people in the city are devout worshipers and are regular attendants at both the midweek and the Sunday meetings. The congregation of this church is very cosmopolitan. It embraces people in every walk of life, from lawyers and manufacturers to the Jews on Ferry Street. There are laborers and merchants, not their families alone, but the laborers and merchants themselves. In fact, it is a misapprehension that women Christian Scientists greatly outnumber the men worshipers. At a Wednesday night testimony meeting fully as many men as women will be found in the audience, and they testify as frequently.

While the testimony given at the Wednesday evening services is remarkable and almost unbelievable, it must be given consideration, for it is offered by serious, upright men and women, and not fakirs. When a man gets up and testifies that after wearing glasses thirty years, his eyes were cured by Christian Science and that now he no longer wears them and can see better than ever before in his life, one becomes skeptical until he sees the earnestness and sincerity of the man himself. These people are absolutely sincere, and take their religion into their every-day life, as worshipers of the generally accepted religions do not. When a woman testifies that, after six surgeons had declared she must be an invalid for life, a few weeks of Christian Science treatment cured her absolutely, one gulps hard to swallow such a statement. But when the woman is intelligent, womanly, alert, and active, her words must be given serious attention. These are actual testimonies which were given at one of the Wednesday night meetings, in addition to many others of a startling nature. The congregation listens placidly and calmly to these statements, sure that the religion can work miracles.

The Scientists claim that their religion is as able to cure organic diseases as it is mental affliction. They are constantly fighting the popular theory that it is mental distress alone for which it has healing power. "Spirit controls everything," is their watchword. Healing is only one part of the religion. The other is a sort of striving for an ideal life, and the pushing out of selfishness with unselfishness. The standard of living seems to grip hold of the young members of the church as well as the adults. At a recent testimony meeting a girl, not much more than a child, got up and stated with clearness and force what Christian Science meant to her, and without any cant or prating.

The faces of the men and women, boys and girls in the Wednesday evening meetings are somewhat remarkable. They are placid and sweet. They look as if nothing could ruffle them, and as if they had forgotten what nervousness and irritability mean. They seem to be utterly without self-consciousness and unafraid of life. The practical side of the religion is also apparent from the testimony, one evening, of a man and his wife, that altercations over the promptness with which breakfast should be served had come to an end, since Christian Science came into the household.

Springfield (Mass.) Homestead.

Let us be Just.

Editor Register.

Dear Sir:—In commenting upon the recent Supreme Court decision regarding the practice of Christian Science, you say, "If the child dies under Christian Science treatment, no fees being exacted by the healer, when it might have been saved by the ordinary practice of medicine, in such cases are not the parents guilty of murder?"

Your question is hypothetical, and we would suggest that still another question arises at this point: Since thousands die daily under the care of the most skilful physicians, a very

large percentage of these victims being children: and, moreover, since according to recent investigation seventy per cent of the cases considered incurable by the medical fraternity are cured when placed under Christian Science treatment as a last resort, why should we not assume that the child in your hypothetical case would have died sooner if left entirely to medicine and deprived of Christian Science?

We can readily understand that those who have only a superficial knowledge of the results of Christian Science practice might consider a dependence upon this Science and the discarding of medicine a neglect rather than a help. It therefore behooves such, before criticising, to consider the successes of Christian Science practice as well as its failures in order to be able to make a just comparison.

Inasmuch as the average success of Christian Scientist practitioners exceeds that of medical practitioners, there is no ground upon which to assume that a child who dies under Christian Science treatment is neglected, much less that it is "murdered."

Not long ago a Christian Scientist was arrested because in a family wherein he healed four others, and wherein three children had previously died under medical treatment, he lost one case. If the Christian Scientist who lost one case was guilty of manslaughter, what shall we say of the medical practitioner who lost three cases in the same family? The charge that the Christian Scientist was guilty of manslaughter could not have been made on the basis that his average success was less than that of the medical practitioner, for he healed four cases while he lost but one, and the medical practitioner lost three.

It is not proper to assume that resorting to Christian Science is equivalent to doing nothing, since vast multitudes are alive and well to-day who had made no progress toward health until they had been placed under Christian Science treatment, and this fact may be stated concerning children as well as adults. Investigation will disclose that the children of those who are now believers in Christian Science have much less sickness than formerly, and the rule is that under Christian Science, the threatening of contagious disease is destroyed in its incipency and very seldom finds any noticeable development. It is also a matter of fact, not of speculation, that the children of Christian Scientists fare much better without medicine and with Christian Science than they formerly did with medicine and without this Science; therefore, to force them to a dependence upon medicine while curtailing their privilege under Christian Science treatment, would be a very great injury to them.

Sandusky (O.) Register.

Christian Science Cures.

Physicians admit unreservedly that Christian Science is the only successful treatment in combating maladies which have their seat in the brain, for no medicine can alleviate imaginary pain. In this respect Christian Science scores over pills and tonics.

There is yet another feature about this Science which must demand respect even from those who scoff at the religion in general and on general principles—and this is the beautiful home-life led by the followers of Mrs. Eddy. In these homes the atmosphere is free from care or worry, small bickerings, and the little things which, ordinarily, rub the fur the wrong way and create unhappiness. These two cures are needed in many a household.

Editorial in Seattle (Wash.) Times.

Still in thy right hand carry gentle peace,
To silence envious tongues. Be just, and fear not:
Let all the ends thou aim'st at be thy country's,
Thy God's, and truth's.

SHAKESPEARE.

The Lectures.

Tacoma, Wash.

A large audience filled the handsome auditorium of First Church of Christ, Scientist, last night [June 18], to hear Mr. Clarence C. Eaton of Tacoma in his initial lecture on Christian Science. The speaker was introduced by Allen H. Armstrong of Seattle.—*The Tacoma News*.

Hoopeston, Ill.

In the New McFerren, July 2, Edward A. Kimball of Chicago lectured on Christian Science. He was introduced by Miss Stella Sabin, who said in part,—

Christian Science is the proof to this age and at this time that the Master's words are true. It brings a message of joy, of peace on earth, good will to men "like that which the angels sang at the birth of Jesus." The fruits of Christian Science prove that the healing works which he wrought and commended to his disciples are possible here and now.

The Herald.

Anderson, Ind.

Mrs. Sue Harper Mims of Atlanta, Ga., lectured at the Grand Opera House in this city Tuesday evening, June 6. The introductory remarks were by the Hon. W. R. Myers, ex-Congressman and ex-Secretary of State, who said in part,—

Thirty years ago the Rev. Mary Baker G. Eddy gave to the world what is now known throughout the confines of enlightened civilization as Christian Science. It immediately attracted the attention of large numbers of enlightened and cultured men and women of the Anglo-Saxon world, and to-day there is scarcely a city on the globe where the English language is spoken, in which there is not an organized body of intelligent men and women who believe in and practise its tenets. By the world at large it is regarded as a new religion; while its devotees claim it is as old as the New Testament. Whether it is truth or not, one thing is certain, it has not been "crushed to earth," and it now seems to be in a fair way to ascend and grow in the estimation of many honest searchers for truth.—*Correspondence*.

Easton, Pa.

The lecture on Christian Science at Able Opera House, Thursday evening [June 1], attracted an audience of about six hundred townspeople and visitors. Mr. Porter of New York City introduced the speaker of the evening, Mr. Bicknell Young, and said in part,—

Friends:—Every heart-throb, every pang of suffering finds responsive action in the progressive thought which has for its object the improvement and uplifting of humanity. Christian Science has been borne in upon a waiting consciousness in response to the plaintive cry of humanity, in response to the world's great need.

From the music of creation's dawn until the glory of the present time, man's toil and struggle have been to know God aright. We all, you and I, have held our varying concepts of God, according to our different points of view; but the cry, the toil and struggle, the ceaseless longing of humanity in all ages, has been to know God aright, for, since God hath created man in His own image and likeness, it follows naturally and with inevitable logic, that we must first learn something about God in order that we may know something about man.

It is one of the great missions of Christian Science to tell humanity something about Him, whom to know "is life eternal;" and it is not unnatural, therefore, nor surprising that in teaching what God is, Christian Science should heal the sick and reform the sinful, that it should increase longevity and happiness.

If it be true that Christian Science is accomplishing all that is claimed for it; if it is healing all manner of sickness and disease; if it is reclaiming men and women from every stage of despondency, degradation, and despair, and restoring them to positions of confidence, love, and honor; if it is making men and women we meet every day, better men and women in every way; if these things are true,—and that they are true is evidenced by the testimony of a countless multitude of healed and redeemed people,—then I believe that we all will agree with the statement that this great thought of Christian Science, which is to-day stirring the heights and depths of human consciousness, presents a subject which invites, nay more, demands the earnest, careful, unbiased investigation and consideration of every individual of society whose objects and aims in life rise above the mere necessities of existence.—*Easton Argus*.

Taylorville, Ill.

A fair-sized audience gathered at the Baptist Church Sunday afternoon [June 18] to listen to the Christian Science lecture delivered by Hon. Clarence A. Buskirk. The speaker was introduced by Judge Rufus M. Potts, who said in part,—

Man is the architect of his own destiny, and the greatest triumph that he can achieve is to be master over himself. When Solomon prayed to God to endow him with wisdom he prayed for man's most precious possession, since through wisdom and a capacity for being master over one's self, he can obtain all that sweetens, brightens, and ennobles life. While life to many is a battle, yet life is neither a battle nor a mystery to those whose very existence is merged into a progressive education, self-possession, wisdom, and the Science of life.

These people have become united into a society, and we have met here to-day to listen to the teachings of those who have passionately searched for truth, and the ascension of reason and justice; a people who have watched, prayed, and demonstrated; a people who are with phenomenal success uplifting the human race morally, mentally, and physically; a people whose belief is not the result of inheritance, but of investigation; a people whose lives and acts are emblematical of their teachings.—*The Courier*.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Letter to Mrs. Eddy.

[THE following letter displays such a keen appreciation of our Leader's work that we take pleasure in giving it prominence.—Ed.]

The Sherman, Washington, D. C., August 1, 1905.

Beloved Leader:—I am led to express the joy which comes to me in knowing that the worthy and chosen workers who are with you at Pleasant View are having the sublime lessons in Divine Science from its Discoverer and Founder. The sole sense of regret which some young students have had is, that instruction directly from the great Teacher of Christian Science seemed impossible.

After graduation in 1891, I was impelled to go from Virginia to New England in search of Truth. I fell short of Boston, and entered Yale Divinity School. Your time is too precious for details. After seeking Truth in other universities, I found the Principle in Science and Health, and have been demonstrating this divine Principle exclusively for six years. The work is full of joy and love, and I am so grateful to God and to our Leader for this Science, and for your wonderful work in establishing the kingdom of God, good, on earth. The kingdom of God had been the central concept with me in the study of the Bible, and I was collecting ideas to embody in a book on that subject when Science and Health was handed to me in 1897. Needless to say, the book was never written, as I have been busy studying and proving the teachings of our text-book ever since.

Your word, that the present period is peculiarly the time for "quick" and thorough-going healing, is the order which we are now marching under. Truly there is unspeakable joy in this service.

Faithfully and reverently,

WILLIAM H. JENNINGS.

Rev. Mary Baker Eddy, Concord, N. H.

A Favorable Decision.

THE following quotation from the *New York World* of August 8, marks the closing of a case which occasioned much sensational comment in the latter part of 1902, and which was quite extensively reported in the newspapers at that time. The *World* says,—

"After three years of fighting in the courts, County Judge William H. Platt, at White Plains, handed down yesterday a decision sustaining the demurrers against the indictments found against John Quinby, his wife, Georgianna Quinby, of White Plains, and John C. Lathrop of Manhattan, Christian Scientists, for allowing the Quinbys' young daughter, Esther, to die from diphtheria without calling a physician.

"This is a victory for followers of the sect who contended that they had a right under the Constitution of the United States to care for the sick as they thought best.

"The Quinbys and Mr. Lathrop were indicted by the Westchester Grand Jury on October 31, 1902, for manslaughter in the second degree, and they immediately filed demurrers. After various motions to dismiss the findings of the coroner had been made, they were charged with

wilfully, wrongfully, and with culpable negligence failing to provide medical treatment for the child."

It is an interesting fact in connection with this case that two other members of the family were stricken with the same disease and that they recovered under Mr. Lathrop's treatment. That the faith of these parents in Christian Science and their lack of faith in medicine were justified by previous experience, is shown by the testimony of Mrs. Quinby, which we copy from *The Christian Science Journal* of January, 1903, and the fact that previous to the family's acceptance of Christian Science three children had died under medical treatment. Mrs. Quinby's statement of her own case is as follows:—

"Five years ago, I was healed through Christian Science of valvular heart disease and dropsy of twenty years' standing. At the time of my healing I was immense in size.

"When first taken down with these troubles, I became very low, and a consultation of doctors was called. One said that there was no hope; I remember that another said that while there was life there was hope. I became better for a time, but never well, and could never do as others did. I was obliged to be very careful; the doctors forbade me to run or over-exert myself, telling me that if I did, I was liable to pass away at any time. There were days and weeks in which I would suffer intensely. I took the most powerful remedies given for those ailments, and I was continually under a doctor's care.

"About six years ago, I was again taken down, and was considered past all help. At times it seemed almost impossible to keep life in my body, and for a period, all were but waiting for the passing away. During this darkest hour, a dear aunt sent me a copy of *The Christian Science Journal*, from the reading of which, I stopped taking medicines.

"Two weeks from the day I stopped my medicine, I was strongly tempted, and I again took one kind of drug, but only for a week. Never since that time have I taken a drug of any kind. I was convinced that if this healing was for others, it was also for me. A practitioner was then brought to see me, who took my case, and in six months I was a well woman. Soon afterward, I regained my normal size, and from that day to this I have been able at all times to undergo bodily exercise of all kinds, with natural strength and endurance.

"The physical healing was wonderful, but the spiritual healing has meant far more to me; for it has shown me strongly that God is All-in-all to me.

"I never can fully express the love I have for our dear Leader, Mary Baker Eddy. Each day my heart goes out to her with loving thoughts, and I thank her for the precious text-book, which has done so much good in my home."

A fact to be borne in mind in connection with all such cases as the one under consideration is that—notwithstanding the occasional failures which have occurred in Christian Science practice—a very large majority of the thousands of adherents of this faith have been healed by this system after fruitless endeavor upon their part to regain their health through the medicines and other means prescribed for them by the most skilful physicians. Christian Science has won its way to public recognition by its success in healing the sick and reforming the sinful, and all attempts to belittle the work of its practitioners, and to discredit them before the people, should fail as this attempt has failed.

Judge Platt has done his duty, and we congratulate him that he was not moved by public clamor to take hasty action in so important a case as the one just decided.

ARCHIBALD McLELLAN.

A Matter of Discrimination.

THE recognition of the naturalness, the need, and the Scriptural authorization of spiritual healing, is becoming so general that it no longer begets surprise, but while admitting the legitimacy of the position of Christian Science in

this regard, many religious writers display a zeal in their effort to find occasions for reserve in accepting its teaching, which evidences the force of their prejudice, as well as the intensity of their fear respecting the results of the ever-increasing influence of Christian Science on public thought. They are quite willing the world should be healed, if it be done without lessening in any degree the present and prospective sway of their own beloved beliefs.

The pastor of a Christian church in the West is reported to have said in a recent sermon and interview,—

"I am well satisfied that the healing wrought by Christ and enjoined by the apostles . . . is the manifestation of a force not limited to the personal ministry of Jesus and the apostles. People of all religions concede that Christ healed the sick and that he asked of them only faith in him. He intended his work to live after him, and to-day, if we believe, we can be healed."

Commenting upon this, the editor of *The Christian Evangelist* says,—

"The proper attitude for the Church to maintain toward all alleged new discoveries of truth, is to 'prove all things, and hold fast that which is good.' It is unwise for Christians to set themselves in opposition to everything that is new, because it is new. There are plenty of things which none of us have yet found out. . . . To the question, What attitude ought the Church to assume toward those of its members who claim to have been healed through the principles taught by Christian Science? our answer would be that so long as they do not permit the teaching of Christian Science to interfere with their faith in Christ, and with their religious duties and obligations in the Church, they should not be disturbed in their fellowship nor be put under suspicion. They are acting within the limits of their Christian liberty.

"With reference to this matter of healing, it does not follow that, if some cures are wrought through faith, we may expect all ills of the human body to be thus cured. . . . The fact that Christian Science antagonizes modern science and surgery, in the treatment of human ills, is proof of its unscientific spirit, and of a serious defect in the philosophy which underlies it."

These statements are not more interesting in view of the kindness of spirit shown, and the extent of the concessions made, than for the queerness and illogic of the criticism expressed. The teaching of Christian Science lays supreme emphasis upon the necessity of faithfulness to Christ,—the recognition of the divinity and authority of the great Way-shower; the re-living of his life and the fulfilment of his commands,—and it is probable that this would be said of any and every system of Christian thought by those who accept it. Christ Jesus is the world's Exemplar, and all Christians are endeavoring to solve the same problem; namely, the attainment of his more exalted life by the overcoming of sin, sickness, and death, and the true means of determining their success is given in Jesus' words, "He that believeth on me, the works that I do shall he do also." If, therefore, Christian Scientists are looking unto Jesus as the author and finisher of their faith, as they surely are, and if they are effecting the healing which, as conceded, it is incumbent upon all Christian believers to do, then their understanding of Christian truth is approved by its efficacy, and they who caution that Christian Scientists be retained in church fellowship only so long as they hold to a "faith in Christ" which does not heal the sick, place a greater value upon an inadequate theological belief than upon that apprehension of the Master's teaching which meets the practical test he imposed! This astonishing attitude evidences a reserve and timidity in following the truth which practically amounts to an Egyptian bondage.

The further criticism that the faith of Christian Scientists in the power of Truth to heal "all manner of diseases" is unwarranted and presumptuous, applies with equal force, as all must see, to the faith of Jesus and his disciples. If

the knowing of Truth once effected the healing of every type of abnormality, then we may put the Pauline query, Why should Christian people think it an incredible thing for God to raise the dead and heal the sick to-day? If Jesus disclosed and demonstrated a law of spiritual regeneration and physical betterment, that law is surely applicable to every possible condition of human need, and the Christian believer who classifies diseases and insists that God can heal only certain varieties, is making it appear that his God is both incompetent and peculiar, and that the disciples were unorthodox and disorderly in healing without regard to this classification.

The determinative question in the whole matter is this: Is Christian Science healing in demonstration of the Christ-truth? If the answer is affirmative, then certainly no limitations can be placed upon it by those who believe in Christ. This question of the identity of Christian Science healing with that of the Master and his disciples, has come to many a thoughtful Christian Scientist, as well as to the critics of this faith, and he has found his peace-begetting answer in his consciousness of unreserved loyalty to the teaching of our Lord, in his longing for the things of the Spirit, and in his increased dominion over fear, sickness, and sin. The appearance of the "fruit of the Spirit" in his life, and the ability, in some degree at least, to do the works of Jesus,—these facts which have attended his more spiritual understanding of the Word, bring the satisfying assurance that he is in harmony with the thought of the great Galilean.

The declaration that Christian Science "antagonizes modern science" and is therefore unscientific, is unsound in its premise and therefore valueless in its conclusion. With mathematics Christian Science has no contention, nor has it with the so-called natural sciences so long as they confine themselves to their legitimate fields; viz., the discovery, aggregation, and classification of the facts of human experience, and the study of their relations and utilities. When, however, the physical scientist enters the domain of theory, and on the basis of sense-testimony ventures to speak dogmatically respecting the nature and qualities of being, he is sure to go astray, and it is here that Christian Science, reasoning from the nature of God and His relation to the universe and man, as revealed in Christ Jesus, corrects the false assumptions of a material philosophy and reaches a conclusion which is capable of practical proof. Christian Science not only indorses, it embraces all that is scientific; that is, all demonstrable truth.

JOHN B. WILLIS.

"Prove all things."

THE present age gives promise of true progress, for the scientific impulse has entered all fields of human experience, and is making constant demand that every theory and every undertaking shall be subjected to scientific tests, that their value to mankind may be accurately determined. It is inconsistent with the law of progress, either to reject a theory because it differs from popular belief, or to retain one because it has long been generally accepted. Paul's counsel, "Prove all things," is being heeded as never before, and with good results. Students of the Bible must see that a divine demand rests upon all professed Christians to seek proof of the genuineness of everything offered for their acceptance, and that this demand requires of them the demonstration of their own rightness as well as of their sincerity.

In Malachi we read, "Prove me now, . . . saith the Lord of hosts," and we begin to do this when we accept and experience the healing power of divine Truth. We are constantly reminded in our text-book that it is our privilege to prove for ourselves every statement of truth, even as the Master furnished proofs of them, and the only fair inference from the loving counsel above quoted, is, that unless we strive to prove the allness of Truth for ourselves, and thus incidentally prove it to others, we "rob God" by virtually

denying that divine Love and wisdom provides for all human need, even for our illumination in a time of doubt. A single condition is imposed upon all who would realize these blessings,—“Bring ye all the tithes into the storehouse, . . . and prove me now herewith, . . . if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it.” Herein is revealed the infinite Giver, who bestows upon us life and health “and all things,” who ever calls to us, “Prove me now.” Thus appealed to, we may well ask ourselves, Are we bringing all the tithes into the storehouse, or are we robbing ourselves by withholding that which rightfully belongs to God? If we fail to receive an outpouring from the opened windows we will surely know the reason therefor.

Because Love blesses us hourly, we must needs bring the tithes of love in return,—love for Love, for the Christ, for the Cause of Truth, and for each other. For the riches of Truth we must bring tithes of truthfulness in thought, word, and deed,—tithes of whatever expresses substance and good to our present highest sense. To withhold in a single particular that which is due to divine Love may hinder our advance until this demand is met. Man has no separate interests from God, though mortals blindly imagine that he has, and in seeking to advance such interests they lose sight of the true way,—the provable way,—in which alone every blessing is to be obtained. There is nothing uncertain in Truth, and Christian Science teaches how we may get rid of all that is doubtful as well as undesirable. Good is positive and potent, it rebukes and destroys every manifestation of evil, it is scientifically provable, and always attainable by the honest, pure thought. If healing, or any other blessing seems to be withheld, we need to apply to ourselves the severest tests, and rise to the demands of the occasion, knowing that divine Love has left nothing unprovided for, and that our duty is disclosed in Paul’s admonition, “Prove the sincerity of your love.”

ANNIE M. KNOTT.

Letters to our Leader.

Boston, Mass., June 27, 1905.

Mrs. Mary Baker G. Eddy.

Beloved Leader and Teacher:—Permit me to tell you how happy I am that your biography has appeared in “The Book of the Presidents and Representative Americans.” I have just read the news in this morning’s paper, and hasten to write you of my pleasure over this further evidence that the world at large is learning to set a higher value upon your life-work, and thus upon your position in history. In the fact that this mark of recognition has been extended to you as a woman, I see a growing breadth of view in public thought. I am also led to believe that the incorporation of your biography in this beautiful work is a sign of gratitude towards one whose sole ambition it is to serve.

May your message be furthered by “The Book of the Presidents and Representative Americans.”

Your grateful student,

W. D. McCrackan.

London, England, July 26, 1905.

Beloved Leader:—Knowing your unfailing love for, and interest in this and all other branch churches, we write to let you know of the step we are about to take. On Sunday, the 6th of August, we shall enter the first half of our new church building, and, with no special outward ceremony, hear for the first time the Lesson-Sermon read within its walls. While feeling a great sense of joy and gratitude for the work carried so far, and for the lessons and experience gained thereby, we know that much still lies before us, but we look forward to its accomplishment with the ever-growing confidence in the power of divine Love which we are gaining through the teachings of Christian Science.

We pray that this divine Love may enable us meekly to

press along the way, to demonstrate selflessness and unity, and thus, in the strength of Spirit, to present to humanity true Christian Science. We pray to seek only divine guidance and to show forth only the fruits of Spirit.

With a sense of love and gratitude to you which can only be learned from Truth,

We remain, lovingly and gratefully,

The Board of Directors, First Church of Christ, Scientist,
London, England.

W. A. BOSWELL, *President*.

Chicago, February 23, 1905.

To Reverend Mary Baker G. Eddy.

Our Dear and Loving Guide:—What may a willing disciple of the blessed truth you have loved and lived say to express her unbounded gratitude for the possible at-onement with the living God? That I knew no God when I came to Christian Science, and that no material persuasion could have had any effect whatever upon my thought, and that the demonstrable truth, as taught in Science and Health, and the spiritual vitality your own pure thought established therein, has indeed been the balm of Gilead for my hungry and famished sense, is surely true. My gratefulness must be lived, thus giving God His own recompense.

Yours most fervently,

MRS. MARY ELIZABETH R. LEVINGS.

Readers Elected in New York.

A RICH, retired New York business man has been chosen First Reader in the new Christian Science Church at Ninety-sixth Street and Central Park West. He is Edwin T. Hatfield, who has been a student in the New York City Christian Science Institute under Mrs. Augusta E. Stetson.

His assistant, or Second Reader, will be Miss Sibyl Huse, daughter of the late Colonel Caleb Huse of West Point. Miss Huse has been a sister pupil of her elderly superior in the Christian Science school.

According to the by-laws of the sect new Readers are elected for each congregation every three years. Those retiring this year are Miss Laura C. Lyman, First Reader, and Stuart C. Rowbottom, Second Reader.

Mr. Hatfield is the son of a noted New York clergyman, who officiated for some twenty-three years at the Seventh Presbyterian Church, at Broome and Ridge Streets, and afterward at the North Presbyterian Church, at Ninth Avenue and Thirty-first Street.

Mr. Hatfield’s business life commenced in the office of his uncle, Moses Taylor, who was one of the ablest and most respected merchants of his day. He was incidentally associated with Cyrus W. Field in financing the laying of the first Atlantic cable.

Later in life Mr. Hatfield became president of the Lackawanna Iron & Coal Company, of Scranton, Pa. He has long since, however, retired from active commercial business.

Mr. Hatfield is one of the oldest members of First Church of Christ, Scientist, New York, and has been chairman of its board of trustees for more than fourteen years. He also held office at one time in the capacity of Second Reader.

The New York Evening Journal.

List of Members.

The List of Members of The Mother Church, including those admitted June 6, 1905, is now on sale. Single copy, 50 cents; six copies to one address, \$2.50; twelve copies to one address, \$4.50. Address all orders to The Christian Science Publishing Society, 250 Huntington Avenue, Boston, Mass.

Testimonies of Healing.

It is with a sense of duty to God as well as to my fellow-man, that I undertake to write this testimony, hoping that it may give cheer to some one who is now discouraged. About the beginning of last summer my little girl, thirteen years old and our only child, became ailing, and in spite of all we could do for her continued to grow thinner and weaker. Her school was only a few steps from our house, and she was very anxious to finish her school work, but I was ashamed to see people turn and look at her on the street. She was so thin and weak it did not seem as though her poor little limbs would hold her up. When at home she would not eat anything to speak of, and when she did she would throw it right up. The last of June the school closed, and she seemed to give quite out and wanted to lie down all the time. At night she was delirious. On July 4 we went away, but had to return, she was so sick, and I had to carry her from one train to the other, as she could not walk. Friday, July 8, the physician that we called in made an examination, took her pulse and temperature, and said, when he came from the room, "I am sorry to tell you that you are going to lose your daughter. Her lungs are both gone, or at least one is entirely affected and the other nearly so." He told us she had quick consumption, and that it would be cruel to make her take medicine that could do her no good, but that he would leave her something to make her sleep nights.

We were desperate. I had, however, been reading some Christian Science literature for a few months and believed in it, as I had seen a little girl, afflicted the same as my own was, restored; so I at once sought some who were acquainted with it, and such words of comfort and love as they spoke to me I shall never forget. They directed me to a practitioner, whom I went to see, and I was told by her that we must not use the opiate. I went home to talk it over with my wife. All this time my dear child was coughing and raising constantly. I went to the Wednesday night meeting, July 13, and after the meeting I requested the practitioner to give my daughter treatment. When I got home she had stopped coughing and I do not think I heard her cough again. The next day she commenced to eat, and it seemed as though she could not get enough. She would get up in the night and eat. July 20, just one week from the time she was treated, there was to be a picnic twenty-seven miles away, to which she wanted to go. I said, "God will take care of her," so she and her mother went. She came home feeling fine. She got weighed that day and her weight was fifty-nine pounds. To-day, November 26, she weighs seventy-nine pounds, and is a healthy child. About a week after I requested treatment, I went to the meeting, at the close of which I handed the practitioner the customary fee for one week's treatment. She insisted on my taking all but one dollar back, as she said she had given but one treatment, and said that the rest did not belong to her.

I am very grateful to our loving Father that this dear child has been spared to us, and I am also very grateful to that loving, loyal woman, Mrs. Eddy.

PERCIVAL M. NEWCOMB, Stoneham, Mass.

[The following extract is from a letter just received in answer to an inquiry respecting the above testimony.—ED.]

My daughter has continued to be in the very best of health since her healing. Before this we had to be very careful of her, winters, as she was subject to bronchitis, but this last winter she has gone out in all kinds of weather, waded in the snow, got wet, has come in, changed her clothing, and gone out again. We have been happier and healthier since we have learned the truth by reading the Bible, and our text-book, written by Mrs. Eddy, that good woman whom we have all learned to love. We have had some other

demonstrations which to me seem wonderful. I hope that her case may encourage some poor sufferer.

P. M. NEWCOMB.

I wish to express my gratitude for Christian Science, and for the many blessings that have come to me and my family from this blessed Christ-truth, revealed to our age through Mrs. Eddy. I had been an invalid since my last child was born. I went through an operation, but instead of getting better I got worse. I tried five different doctors, and was in a hospital several times, taking treatment, and was so miserable that I did not know what to do. I tried medicine, but all to no avail. I learned that no matter how many diseases we have, they can all be cured if we only let go of our false gods and turn to the one God,—divine Love. I had severe uterine trouble, besides liver, stomach, and bowel troubles, but thanks to God who healeth all our diseases, we did not have a drop of medicine in the house after we came into Christian Science. We have three children and they are all learning to demonstrate the truth for themselves. We study the *Sentinel*, *Quarterly*, and *Journal*.

My heart is filled with love to our dear Leader, Mrs. Eddy, for bringing us this blessed truth that makes us free.

MRS. MARY WIECK, Grand Mound, Ia.

Nearly eight years ago Christian Science was first brought to my attention through the healing of my sister, who had been a semi-invalid for several years previous. On witnessing this sudden emergence from darkness into light, I naturally became interested, sought help, and in one week's time was greatly benefited both physically and mentally, being healed of sick headaches, to which I had been subject as far back as I can remember. Other physical ailments have also been destroyed through the application of Christian Science. One in particular I would like to mention, as it may give some seeker for the light encouragement to press on and be not weary in well-doing. I was attacked with a form of rheumatism whereby I was greatly hindered in walking, and at two different periods (about six days apart) on awaking in the morning it was with the greatest difficulty that I could move. I managed within a short time to get out to a practitioner, who lived near where I then resided, and a treatment in each instance put me on my feet in more ways than one, and the ailment was entirely destroyed in a short time.

I could never enumerate the many proofs I have had, and do have every day, of God's care and protection through the study and right application of Christian Science; the ever-present help it is to my loved ones; the ailments that have been destroyed through absent treatments; the knowing that we can lift the burdens that beset humanity, and the peace it brings to us in relieving such as desire to live rightly, lovingly, and purely; and to realize all the good that is for each and every one.

I am very thankful that I have been privileged to gain this true understanding of God,—this demonstrable truth, given to us through the untiring devotion of our dearly loved Leader, Mrs. Eddy, who, as the Discoverer of Christian Science, is enabling so many weary, diseased, and heart-sore pilgrims to find their way into the consciousness of man's unity with his Maker.

MISS KATHERINE G. DILLON, Chicago, Ill.

Shortly after rising one morning, I was attacked by a sharp pain which seemed to encircle my waist; it was so severe for a time that, when stooping or sitting, I could scarcely raise myself up. I was striving continually to affirm the facts of being, mentally, while performing my morning duties about the house, and did not, by word or action, show to those around me the struggle I was going through, but I was unable to sit down for any quiet work until about ten o'clock that morning. I then took up my study of the Lesson-Sermon for that week (it was the

lesson on "Spirit") and it contained this reference, "What? know ye not that your body is the temple of the Holy Ghost?" I knew at once that I had found my help, for as I read the words I had a clearer sense than ever before that the real man is spiritual,—not for a moment subject to matter nor to any of the limitations of so-called material law. Gaining immediate relief from this realization, I continued joyously along this line of thought. The task was a delightful one and brought to me many helpful lessons, for the ray of light I had received brought out, in the words I read in the Bible, things I had never before seen, although I had of course read them many times. This demonstration over a sense of suffering was very helpful and beautiful to me.

MRS. ADELA S. HAWLEY, Seattle, Wash.

My gratitude for Christian Science cannot be expressed in words. It is eleven years since I first heard of it, and up to that time I depended on *materia medica* as my help, but since then I have learned that God is our only help. I have been healed of many diseases through Christian Science, and for these demonstrations I extend my sincere thanks to Mrs. Eddy for revealing this wonderful truth to the world through "Science and Health with Key to the Scriptures."

I feel very grateful that I am among those who are fighting against error, and I find that the more I do for God and His kingdom the more blessings I receive. The *Sentinel* is a great help to me, for the testimonies make me the stronger to do as Christ Jesus commanded, "Preach the gospel" and "heal the sick."—CHARLES E. CUMMINS, Newark, O.

About five years ago I became interested in Christian Science through reading our text-book, *Science and Health* by Mrs. Eddy. After reading the book for about three weeks, I was convinced of the truth it contains, and knew that I had no other desire than to work for this great Cause. Learning that one could be instructed in Christian Science, I felt I must go to America and be taught. My father is one of the oldest pharmacists in the city where I live, and when I spoke of my desire I did not receive any encouragement. However, I started to read the Lesson-Sermon with others who were interested, and after three years, working as far as I could understand the text-book, the way was opened for me to visit America. I found from *Science and Health* that error could not keep me from learning how to demonstrate the truth, and one by one the obstacles disappeared, the last though not least of which was a dread of the sea. I had been so afraid, that I could never enjoy the pleasure of boating on our own calm lake, but when I started on the long water journey my thought was filled with messages from the Bible, of God's loving protection. The fear of seasickness was overcome immediately by reading in *Science and Health*, page 259, lines 23 to 26. Words will never convey the gratitude and love that I feel towards all those I met in Boston. I had the privilege of seeing our dear Leader at Concord, and of attending the dedicatory services there on July 17, 1904. To attend the services in the dear Mother Church was an experience to awaken greater love for God, who has revealed this truth through Mrs. Eddy. Christian Science has certainly changed my darkness into light, and taught me what constitutes true happiness. My heart is full of love and gratitude to God, and to our Leader for this revelation of Truth, and for the countless blessings I have received. My earnest desire is to reflect Truth and Love always.—EDITII MALYON, Ballarat, Australia.

I wish to express, in a small way, my gratitude for Christian Science. The truth was brought to my notice by an osteopathic physician, over a year ago. I was in my senior term in osteopathy and had also had experience with medicine, being a graduate nurse with some experience, and was

quite prejudiced against Christian Science. I had known this physician all my life and knew him to be a close student and an honest seeker after the best way to help suffering humanity.

It was during my vacation and when I was treating some of his patients that he spoke to me. I listened to what he said, read his copy of *Science and Health*, and was relieved of a headache that was almost constant, year in and year out, being most severe at times. Just before returning to school I purchased a copy of *Science and Health*, and tried to study it. I found myself unable longer to accept what my osteopathic instructors had to say, and I was finally compelled to give up my school work.

Soon after, my wife was healed in Christian Science of a trouble which medicine and osteopathy had failed to cure, and my prejudice was overcome. I have had a struggle with the question of financial supply, but I clung to Truth, and with the aid of some good Scientists and the help of church services, so much has been accomplished that I cannot express the gratitude I feel at this time. I have learned to make many demonstrations for myself, and find something new each day for which to be thankful. One experience which proved helpful occurred two months ago. I received a severe blow upon my thumb-nail. I knew enough of the truth to stop the pain and soreness completely that day, and I have had no trouble or inconvenience from the injury, although I lost the nail and now have a new one. Twice before I have had similar injuries, losing the nail both times and suffering considerable pain. One of these two injuries was no more severe than the recent one, but I had only partial use of my hand for about three months after the injury.

R. G. SUTHERLAND, Des Moines, Ia.

What Christian Science has done for me in the last eighteen months, it would take too long for me to tell, but I will relate some of the benefits I have received. My eyes were badly affected, so much so that at times I could not see large print; but through reading *Science and Health* and making a study of the same, my sight was restored. It is stronger than it ever was before. This was my first proof of the truth in Christian Science.

My second experience of the power of this truth was on a voyage from the west coast of South America to Hamburg, Germany, when my steward became violently insane. This condition was brought on through fits, which he had very often. He became so violent that it took three men to hold him. Christian Science treatment was given him by a lady on board ship, and in less than four hours the man was in perfect health, going on with his duties; and to my knowledge he has never had a return of the insanity or the fits. This was about twelve months ago.

My third experience was on the same voyage, when we were blocked in the ice nine hundred miles southeast of Cape Horn. It was winter, and we had but a few hours' daylight. To mortal sense it seemed that nothing I could do would save the ship, with all on board, from destruction. Before night set in, I went into my chaff-house and asked God, in spiritual prayer, to guide me out of this danger. I received my answer, which was contrary to all nautical experience, but I acted on it at once, and when daylight came I then had the proof that God had saved the ship from destruction. Daylight revealed to all that the course which the ship had sailed over was completely blocked with icebergs from five hundred to a thousand feet high.

These three experiences have proved to me that spiritual prayer is always answered. Before I became a Christian Scientist I was a member of an orthodox church, and as one of my relatives was at one time head of that denomination in England, I considered well before severing my connection with it, but I had always felt there was something lacking in its teaching. This caused me to attend the services of other denominations, both in England and in nearly all parts of the world, and to my idea I have never found any teaching

to equal that of Christian Science. I cannot be too thankful to our Leader, Mrs. Eddy, for bringing to us this great truth.—CAPT. R. H. BLACKMORE, Liverpool, England.

About a year after I was healed of pulmonary consumption by Christian Science, I had a severe attack of pleurisy, and no practitioner being within reach, I strove to demonstrate for myself, but without success. After many hours of suffering, I decided to try my old material remedy,—the counter-irritant,—which had never failed to give relief in times past. I used it thoroughly, but was surprised that I received no benefit. I asked myself, What do I lack? Am I trusting in God? Evidently not, or I would not have used the counter-irritant, and besides it was midnight, and I was sitting up holding my aching side. Surely my position was not that of one who trusts in God. I retired at once and tried to realize God's spiritual creation. As I closed my eyes to materiality, the beauty and reality of spiritual being dawned upon me, and for some minutes I feasted upon a contemplation of spirituality. It was plain to be seen that all was love, joy, peace, and happiness. At last it occurred to me that my pain was gone. Certainly God is Love, and He was very near to me at that moment. I took a deep inspiration, with no pain, then a complete exhalation, with no discomfort whatever. I was astonished. At other times it had required several days after so severe an attack of pleurisy before I could take a full breath. I cannot express the gratitude I felt at that moment for my deliverance.

One thing remained, however. God was with me; surely He would show me how I could prevent a recurrence of my past painful experience. Spiritual intuition pointed to the Word of God. I seized my Bible, opened it and read these words: "Stand fast therefore in the liberty wherewith Christ hath made us free, and be not entangled again with the yoke of bondage." How strange that I should turn to these words, and how well they fitted the circumstances.

Truly, in our gratitude to God, we should not forget her who has toiled so unremittingly to replace a vague sense of truth with practical Christian Science.

J. MARSHALL KING, S. Frankfort, Mich.

In my hopeless endeavor to put out a fire caused by exploding alcohol, I found, after the firemen had gone, that my hands were badly burned. For a few moments the pain was terrible. It seemed as if my hands were gone and nothing was left but burning pain. Almost instantly, I remembered the three Hebrews in the burning, fiery furnace and how they came forth unhurt. Then the words of our hymn, "The flame shall not hurt thee," seemed to ring in my ears. This was followed by a great peace which passed all understanding, and in ten minutes the pain had gone, never to return.

MARTHA KEEP SINCLAIR, New York, N. Y.

My heart goes out in thankfulness to God for the revelation of Truth as it is given to us in Science and Health, knowing by experience that it brings to us life, liberty, and love. In the proportion that we understand Christian Science do we indeed become the children of God, endowed with the wisdom and power which enable us to be masters of every situation. It is now about twelve years since I first heard of this Science, which was very distasteful to me at that time; but I soon saw some healing which I could neither deny nor forget, and after several years I began to read Science and Health. When I saw that it contradicted the evidence of the material senses I gave it up, because this was about all I had to go by at that time, yet it was very unsatisfactory. I tried hard in my material way to be good and kind, and when this did not meet with a response from personality, I felt greatly hurt. After repeated trials and failures, when I knew not which way to go, I became very skeptical and suspicious, while worldly success

seemed too selfish to be worthy of any great effort. In this way I drifted on for several years more, and then I got to a town where there was a Christian Science service, which I attended, and the kind reception given me there, the happy, contented people who showed real interest in me, convinced me they had something I did not have, neither had I ever met anything just like it before. They seemed to have absolute faith in something, and their quiet, contented way, which was yet vigorous and active, brought to me a sense of peace. In this way I was led to study Christian Science for myself, and I got much help; still, when reading in the Bible of the great things done in former days, it seemed like a fairy tale, because I could not make its teaching applicable to my daily life and in my business. I did not understand that Life is spiritual, that all material seeming is false, and that it must be denied and overcome. We can read hardly a sentence in Science and Health without being told what to do, and that all our work is mental; that we need not fight with personality, but with our material sense of personality. These great truths I did not then understand, so Christian Science was laid aside and I drifted into materiality until utter darkness was my lot, not one ray of light shone on my path. Failure and ruin on every side seemed the inevitable. My earthly means failed, and my physical energies were not equal to the occasion. My condition could not have been worse, but this was the schoolmaster to bring me to Christ.

In this condition I again took up the study of Christian Science under the kind guidance of a faithful practitioner, and the spiritual understanding which has unfolded to my consciousness is unspeakable. I have learned by experience that divine Love never fails to meet our every need. I used to think that unless the divine light showed me the path in advance, I could not take the next step, and thus darkness came in, but I have since learned that this was error. What a revelation it is to know that evil, sickness, and death are not realities! I have been led out of darkness into light, from doubt and fear into freedom,—better health and purer morals,—and in this Science I find a rule for the solution of each problem in social and business experience. I can find no words to express my thankfulness to God, for the revelation of Christian Science through our Leader, Mrs. Eddy. It is indeed the manna which comes down from heaven and feeds a hungering world.

F. B. LEAPER, Withee, Wis.

There is so much for which to be thankful, but just now I was thinking of what it means to me, to be free from sensitiveness to climate, atmosphere, and immediate environment. Then my thoughts go out to our Leader, Mrs. Eddy; whenever I think upon her life, I want to try harder than ever to be lovingly obedient to our Father-Mother God.

C. L. HARRIS, Boston, Mass.

[Written for the *Sentinel*.]

The "New-Birth" Day.

V. K. S.

PILGRIM, as the years roll by,
See God's beauties all unfold;
Age is gain for those who try
To leave the dross and guard the gold.

Never pause to think of time,
Nor sigh and falter: It is night.
Look to the eternal prime;
Look for the immortal Light.

Years are steps by which we rise
Nearer youth, and lose decay:
Grow more loving, strong, and wise,
Thus unfolding in God's day.

From our Exchanges.

In the light of twenty centuries of Christian teaching; in a more general recognition of brotherhood; in the kindlier spirit introduced through the progress of a higher civilization, it is inconceivable that Christian nations should believe war to be justifiable under any condition. There may appear to be great principles involved in national disputes, but to say that those principles cannot be maintained except by war, is an open contradiction of the very heart of Christian teaching. It is from human weakness and hate that wars and rumors of war continue through the generations, but this does not argue their justification. Whatever may be our declarations as to the desirability of peace measures, so long as we allow war to continue, we are in league with the fiercest spirits of hell. Standing in the calm of the teaching of Jesus, how strangely inconsistent for Christian nations to accept as matters of necessity the decisions of cabinets and political leaders, which plunge nations in awful carnage and strife, with unspeakable suffering and swift death. Bloody battlefields are held in honor because humanity has glorified a hateful superstition. We condemn the murderer and consign him to oblivion. We uphold and make honorable the deadly strife of contending arms. We hang the man who shoots down his fellow-man in the pursuits of daily life; we cheer the battle-line and admire those who can effect the greatest sacrifice of life. War, what virtues do we attribute to its hellish horror! What a perversion of every principle and claim of righteousness! What folly for men who believe in peace to act as though justice could find no arbitrament except in the fierce conflict of death!

The Standard.

There must be a sense, both on the part of the business man and the politician, on the part of those who have and on the part of those who desire to have, that power is a trust and not a privilege; that life is to be valued not for what it enables us to get out of the people but for what it enables us to give to the people in the way of service. This was Christ's message nineteen centuries ago. This is the message of every true prophet. This has been and must be the message of the Church whenever the Church is a power among the people.

PRES. ARTHUR T. HADLEY.

The Independent.

Jesus was a *real* king. Not a puppet of robes and diadems, but Lord of the land by virtue of the qualities of his character and rule. He was the only man to whom the title ever came who realized the aspiration of the nation's soul. Of all who ever wore the crown not one ever had such authority as he, not one so touched the deeper chords of feeling in the heart of Israel, nor saw so clearly the goal of her ideal. For he alone is King who gathers in himself the history, the self-consciousness, and the hope of those over whom his authority extends. —*The Universalist Leader.*

What would happen to religion and theology if an ethical revival of the right kind were carried on? Would not faith, hope, and charity take care of themselves? If there were a rising tide of righteousness sweeping through the highways of our towns and cities, without reference to doctrine, would there not be an eager desire awakened to know more about the eternal sanctions of righteousness?

The Christian Register.

As men give themselves up to practical morality, and understand the saying, "He that doeth the will," they find themselves treading in the footsteps of the Master. The renaissance of morality is the revival of religion that we need. No one can speak of Christianity as outgrown when, as yet, "it has never been tried."

PROF. FRANCIS G. PEABODY.
The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

• STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science, 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

More than one million acres of the Uintah reservation in northwestern Utah are to be opened to location on and after August 28.

Secretary Taft and his congressional committee and accompanying friends have reached Manila.

Foreign.

The Federal Court of Cassation, Venezuela, has given final judgment in the matter of the proceedings instituted against the French Cable Company, confirming the dissolution of the contract of the Government with that company. On March 31 last, President Arnal of the highest court decided that the French Cable Company had forfeited its contract by failure to fulfill its terms. The present decision was rendered by the full court.

The Federal Court of Cassation, on appeal, has also given a final judgment confirming the dissolution of the Hamilton contract, with costs. The asphalt concession was originally granted to Hamilton and was acquired from him by the New York and Bermudez Company. The whole matter will be investigated soon by Special United States Commissioner Calhoun, who is on his way to Venezuela.

The Arctic steamer *Terra Nova*, which went to the relief of the Fiala-Ziegler polar expedition, has rescued Anthony Fiala and his party of thirty-seven. The ship *America*, which took out the expedition, was crushed in the ice early in the winter of 1903-1904, and lost, with a large part of her coal and provisions. The expedition has been severed from communication with the outside world since July, 1903. The party sailed for the North Pole June 24, 1903, from Norway, and expected to be absent not more than two years. Their destination was Franz Josef Land, from which they were to make the pole. Since that time two expeditions have been sent out to the relief of the American party.

The Chinese Government is said to be negotiating for the purchase of the Hankow and Canton Railway and the concessions for further construction. Negotiations have

been hampered by uncertainty as to whether the provincial or the imperial government is the proper party with which to deal.

The Norwegian people, in a referendum taken Sunday, pronounced in favor of a dissolution of the union with Sweden. Of 450,000 voters, 320,000 cast ballots. Returns show that about one person in three thousand voted against the dissolution.

It is rumored that Lord Curzon, Viceroy of India, may resign. Relations between him and Lord Kitchener, who has recently been given enlarged powers in Indian military matters, are said to be strained.

The promulgation by the Czar of an imperial edict granting a National Assembly to the Russian people, which was promised for Saturday, August 12, was not made, but is expected later.

The Russian cruiser *Pallada*, which was sunk at Port Arthur, has been refloated.

Industrial and Commercial.

At Sault Ste. Marie, Mich., on the 2d and 3d, the fiftieth anniversary of the opening of the ship canal around the rapids of the St. Mary's River was celebrated by naval and military parades, races, public addresses, etc. The canal was constructed by the State of Michigan, and was transferred to the Federal Government in 1870. Its traffic exceeds in quantity and value that of any other artificial waterway in the world.

The Geological Survey reports that the production of salt in the United States during 1904 was 22,030,002 barrels, valued at \$6,021,222. The value of the clay products amounted to \$131,023,248. Of common brick, 8,665,171 thousands were produced; of vitrified paving brick, 735,489 thousands; of front brick, 434,351 thousands; of fire brick, 597,760 thousands. The value of the pottery was \$25,158,270.

A valuable cement mine has been discovered under New York City. It is at the foot of East 34th Street, where a shaft for the Pennsylvania tunnel is being sunk. The mine is over one hundred feet below the surface of the street.

Cuba exported only 705,000 tons of sugar up to June 30, compared with 806,073 tons for the corresponding period of 1904. There was on hand June 30, 1905, 351,879 tons, and 161,819 tons on June 30, 1904.

During the past three fiscal years, ended June 30, 1905, from the ports of Europe, 1,932,934 steerage passengers embarked for New York.

According to a bulletin of the Census Bureau, the commercial value of the railroad property in the United States is \$11,244,852,000.

During the recent music festivals at Dieppe 85,000 postcards were handed in at the post office in two days.

General.

It is understood that negotiations are in progress for the purchase by an American of Titian's portrait of Cardinal Bembo for \$125,000. It is also said that Titian's portrait of Aretino will be sold to the National Gallery in London for \$150,000. Sir Casper Purdon Clarke, the newly appointed director of the Metropolitan Museum of Art, of New York, is reported as saying that the portrait of Cardinal Bembo is one of the finest Titians extant, and that, if it is bought by a private American, it ought to be placed in a museum. He points out that on the average fire destroys one valuable collection of paintings in England annually, for which reason many English collectors now have copies of their pictures in their homes, confiding the originals to the keeping of the public galleries.

At Cheboygan, Mich., is the largest sawdust pile in the world, and strangers often

walk out to gaze with astonishment at its proportions. It is a veritable hill, 1,080 feet long, 875 wide, 3,625 in circumference, ranges from twenty to fifty feet in height, and covers twelve acres of ground. It is the accumulation of the lumber company since 1877. Early in its history the company tried to burn the pile, but the outside only would burn, the flames refusing to penetrate the closely packed interior. Since then chemical uses have risen for sawdust, and the huge pile increases year by year, pending conversion into charcoal, ethyl, alcohol, or oxalic acid.

At Coney Island recently, Baldwin's airship, the *California Arrow*, sailed up two hundred feet from the Boer War enclosure, and made a trip in the air around the Brighton Beach race-track, then along the ocean front toward Manhattan Beach, returning to the Boer War grounds in perfect safety. The driver said: "The ship was under my control from the time it left the aerodrome till I returned, and I had no difficulty in describing curves, descending or ascending while in the air."

Norway's coast, along its outer belt of rocks, measures about seventeen hundred miles, but its entire shore line, including the fiords and the large islands, is close to twelve thousand miles in length, enough to reach half way around the world. Norway is about two hundred and fifty miles wide in the south, and in the north a little more than sixty miles; its area is 124,129 square miles. Its population in 1900 numbered 2,230,880, and Sweden's in the following year numbered 5,175,228.

The Island of Sakhalin, which the Japanese have recently captured and occupied, contains about 25,000 square miles and is about the size of Ireland. It is 670 miles in length, has a river 250 miles long, and mountains which reach an elevation of 5,000 feet. It has been used by the Russians as a penal colony for political prisoners. It contains coal, not easily mined but abundant, dense forests, regions rich in oil, fur-bearing animals, and valuable fishing-grounds.

Money is more evenly distributed in France than in any other civilized country. According to the taxation returns fewer than 20,000 persons have property valued at \$200,000. Of these only 6,000 have fortunes exceeding \$350,000, while not more than one hundred have \$2,000,000 or over, and there are just ten persons with more than \$25,000,000.

Placed end to end in a continuous line, the streets of London would extend from the Mansion House across the entire Continent of Europe, and beyond the Ural Mountains into Asia. The number of inhabitants exceeds the populations of Paris, Berlin, Vienna, and Rome put together.

It is stated that a private limited cotton company in the Rossendale district, England, has come out with one hundred and fifty per cent profit for the half-year, while another boasts of seventy-five, and a third of fifty per cent. The Great Harwood has just paid a dividend of fifty-nine per cent on the original share capital.

It is reported from London that the popularization of the American soda water fountain and American iced drinks is going on rapidly. Ten years ago a soda fountain in England was a rarity. Now they are to be found everywhere.

Diving operations are proceeding at Tobermory, where the Admiral of Florence, the treasure ship of the Spanish Armada, is supposed to have been wrecked. Sufficient proofs have been obtained to show that the divers are in proximity to the treasure ship.

The contract for building the new Manhattan bridge, which is to parallel Brooklyn bridge, has been awarded. It is to cost \$7,284,000.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Some Observed Conditions.

HON. CLARENCE A. BUSKIRK.

THERE is an army now engaged in "the good fight" for Truth, and it is largely made up of heroes and heroines. The writer has come to know many of them during the last twelve months, and he believes that honor ought to be accorded where honor is due, that deserved words of recognition and encouragement are wise because deserved. Scattered throughout the world are heroic men and women who are braving ridicule and misrepresentation,—persecution of varied forms,—supported only by their gratitude for Christian Science and their consciousness that they are serving God and humanity. Around them are many others who owe quite as large a debt of gratitude to Christian Science, but who lack the courage and fortitude to enroll themselves openly under its banners. If all who are thus indebted were under our banners, our numbers in many communities—probably in nearly all communities where Christian Science has had an opportunity to do its works—would be greatly increased.

In our larger cities the time has not passed when it requires moral heroism openly to avow oneself a Christian Scientist, and in our smaller cities and towns the time has not begun to pass. In these latter communities the strident voice of Mrs. Grundy has always been too notable an authority, and the fear of her criticisms, where every person comes under the surveillance of the entire community, is often a very unpleasant test of one's courage. Christian Scientists in the larger cities have their own difficult problems to solve; but they sometimes fail to appreciate the difficult environment of their brothers and sisters in those smaller communities where everybody is known to everybody. There is no harsher critic than he, or, still oftener, she, of a small city or town. In the large cities there is far more personal independence in both opinion and conduct. In our towns and smaller cities, the genius of progress is constantly confronting "time-honored" customs, opinions, beliefs; and the man or woman who fails to bow deferentially to these "time-honored" survivals needs to study the story of Gulliver when he was found asleep by the Lilliputians, on his first introduction to their country, and bound to the earth as a prisoner in their absurd but unpleasantly effectual bonds. The truly granitic nature of rural conservatism is scarcely appreciated in our progressive cities.

In inhospitable places, throughout the United States and the Canadas, heroic little bands of Christian Scientists, sometimes a dozen or more of them, and sometimes only three or four, have been engaged for years in sowing the seeds of truth, and the parable of the sower has been repeating itself. Sometimes, without any fault on the part of the sowers, the seeds have as yet failed to sprout. Once in a while a Christian Science worker voices a sense of wonder why the progress seems so slow in his or her particular part of the vineyard. But the work is not deserted. The eyes simply have a more earnest look of determination. The

writer has enjoyed the happy privilege of talking with quite a number of our workers under such conditions. They are of a metal that rings true. They are sowing better than they know. The influences of their own bettered thoughts and lives is more widespread than they are aware. Their influence is slowly but surely making its way into the consciousness of those around them. Respect is taking the place of ridicule; kindness the place of intolerance; inquiry the place of opposition. And often some poor heart who has been delivered from a den of lions through the blessed ministry of Christian Science, but who has remained mute and seemingly ungrateful, stands forth and publicly proclaims the fact. It is true that gratitude in some people is a plant of altogether too slow a growth; but we must remember to be patient. Already the horizon of this twentieth century is budding, thickly budding, with radiant prophecies.

The wonder to the writer is, not that Christian Science has made so slow a growth in many inhospitable communities, but that it has grown at all, or even persisted in remaining alive. The only possible explanation is the eternal and indestructible nature of that which is true.

In our large cities the problem to be met by Christian Scientists is different. There the battle is already raging, and must continue to rage still more vigorously, between Christian Science, on the one hand, and modern materialism, on the other hand. In every street, park, and alley, in palaces and dives alike, the despairing, and therefore degraded, voices of materialism are crying out, "Let us eat, drink, and be merry, for to-morrow we die!" Public and private corruption seems to have honeycombed almost every spot, and Christian Science is the only efficient antidote in existence against the poison of materialism. Truth is the only influence that can save our Sodoms and Gomorrah. Great is the darkness, but the rays of light can scatter it. Stand firm, O pioneer army of Truth, with unyielding fortitude for your shields and loving energy for your swords! The arrows of opposition will fly thick and thicker, but victory awaits you. The rewards of such a struggle are more honorable than any badges or medals ever bestowed by the world's greatest military captains. Your good fight is for Truth and for humanity!

Heretofore, ridicule came against you, with its aggravating sting; but that hornet has been crushed. Now the huge octopus of materialism is to be encountered, the monster with unnumbered arms and antennæ, that lurks in the darker caverns of the sea of human consciousness. His strength seems vast, his endurance marvelous, his cunning demonic, his ferocity pitiless; but the swords of Truth are in your hands, and it is your glorious and heroic work to smite error, hip and thigh, until every falsity and every wrong shall be utterly vanquished and cast out.

Convincing Evidence.

EDWARD M. YOUNG.

MANY essays and books, more or less convincing, have been written with the purpose of proving the truth of Christianity, a subject of the greatest importance to all mankind.

Copyright, 1905, by Mary Baker G. Eddy.

In courts of equity those whose duty it is to sit in judgment are supposed to give in their verdict in strict accordance with the evidence. Should the evidence conflict, more credence is given to the circumstantial than to any other. However diverse opinions may be in all other matters, there is little if any difference expressed concerning the ideality and perfection of the life and teachings of Christ Jesus; but to realize its practicability, to experience and manifest daily that exalted life which he demonstrated, has always been considered impossible of attainment by others. After the remarkable transformation which comes to the faithful student of Christian Science, he becomes aware that, in common with many others, he had previously entertained a very faulty sense of the nature of God and of the work of Christ Jesus, and that his concept of holiness was a thing apart from that of wholeness. Jesus' words, "Be ye therefore perfect, even as your Father which is in heaven is perfect," and Paul's injunction, "I beseech you therefore, brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God," these counsels have seemed quite useless if not preposterous, and an individual who suggested the possibility of their fulfilment has been declared visionary, to say the least. Jesus was not an ascetic. He came eating and drinking, and was most accessible to people of all classes. In many respects he was a non-conformist, but he lived the two commandments on which hang all the law and the prophets, yet he claimed nothing for himself which he did not also claim for all his brethren.

In spite of Jesus' life and teachings, God has been worshiped as a being afar off, and it remained for another age and another inspiration to produce unmistakable circumstantial evidence that man is in reality at-one with his Father. A rapidly increasing number of Christian Scientists, who were blind but now see, who were lame but now walk, who were sick with divers diseases but now are manifesting health and happiness, having returned like the prodigal to the Father's house, witness to the genuineness of the discovery of Mrs. Eddy. They are living testimonials to the benefits of her life and labors, and they present a body of circumstantial evidence which the court of the world's judgment can neither ignore nor reject. If Christian Science is to be judged by its fruits, then the unbelievers are placed unmistakably on the defensive. True, even though one were raised from the dead, some would not believe. There is a religious conviction that Christ Jesus is the way, the truth, and the life, and it was he who said, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

Christian Scientists have great cause for rejoicing in the convincing evidence that Christianity is real, practical, and abiding, and that a new and inspiring meaning has been given to the words, "I am the resurrection, and the life: he that believeth in me, though he were dead, yet shall he live." It is manifest that one cannot be wholly conscious of living, moving, and having his being in God unless the body be harmonious.

The unprejudiced who take the pains to investigate and weigh the evidence, the teachings, and results of Christian Science, will find that, when weighed in the balance, it is not found wanting. How long a time must elapse before we realize fully the truth of Jesus' teachings, demonstrate the facts of scientific being, "knoweth no man, no, not the angels which are in heaven, neither the Son, but the Father." In these words of the Master we have a definite statement concerning the limitations of human sense, but in the light of his glorious career we have abundant encouragement to "press toward the mark for the prize of the high calling of God in Christ Jesus."

"Thy will be done in earth, as it is in heaven."

DORA M. KNAPP.

CHRISTIANS expect to be well and happy in heaven, for they believe it is God's will that they should. It is also generally believed that God has provided blessings untold in this spiritual abode for those who love Him, all according to His will; and yet how many there are, who thus pray and believe, and who yet accept any adversity or disease that may come upon them as being God's will! Many also believe that any resistance or lack of resignation to affliction would forfeit their admission to the kingdom of heaven, where, according to God's will, their woes will cease. Is this consistent? Is it not in direct contradiction to the petition, "Thy will be done on earth, as it is in heaven"?

If it is God's will that His children shall be well, happy, and partakers of divine blessings in heaven, does not the Lord's Prayer ask for the realization of the same conditions here? Would our Master have given a prayer to be used by all who believe in Christ, Truth, which contains any impossible or contradictory requests? Could God, "the same yesterday, and to-day, and forever," have one will here, and another in heaven? Is not heaven the state of consciousness in which God is made manifest as All in all, and in which everything and every one manifests the eternal glory, harmony, peace, happiness of infinite Love, and where no sense of sickness, fear, sorrow, sin, or anything that maketh or worketh a lie can enter? The petition really means, then, that every good thought and thing which one could desire or expect to receive according to God's will in heaven, should be desired, expected, and received here.

Christian Science teaches us how to know God's will, and that this divine will is universal, impartial, infinitely kind, loving, satisfying, and unfailing in its bestowal of good to man. It teaches us that as the false, material concept of God and man is removed, and the spiritual understanding of the first commandment is actually demonstrated in our lives, we can and do daily receive the blessings and the impress of the divine will here and now. Each victory over sickness and sin is proof that Christian Science reveals the way of salvation from all error, and that an error which is spiritually overcome here, is overcome for all eternity, and we can truly say, with thankful hearts, God's will is done in earth, as it is in heaven.

After Thy Likeness.

E. L. L.

As for me, I shall behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness.—PSALM 17: 15.

BEFORE I heard the welcome message of Christian Science, brought to us by the inspired writings of our Leader, when I read this passage from the Psalms it only spoke to me of that state of bliss to which we had been taught death alone was the door. The awakening was believed to be the unclosing of our eyes after we had passed through death, upon the Paradise that lay on the other side of this strange and awful sleep. The true beauty of the passage was therefore obscured to me, and as I possessed an intense desire for life, I was disappointed that the longing for death was not uppermost, in order that I might awake with His likeness.

How differently do I read to-day, after studying Science and Health, which is indeed a "Key to the Scriptures." Now I know that death is not the gate to Life, and that we need not wait for it, to obey the command, "Be ye therefore perfect, even as your Father which is in heaven is perfect," for this is surely the same as awakening in His likeness. Each day as we step forth joyously in the morning light, we can awake with the likeness of our Father, for now we know that the one infinite Mind, God, is all, and that as we have His likeness imprinted on our character we daily bear

witness to the fact that we are awakening, that we bear the indelible impress of our Father's likeness *now*, for God made man in His own image and intends him to reflect the divine nature. We must realize and show forth this glorious truth in our daily life and conduct, and thus comprehend the satisfaction of which the Psalmist speaks.

If we would find the true way to be satisfied, let us glance for a moment at the gospel narrative and see how the Master's days were spent. We read that he "went about doing good," he healed the sick of all manner of diseases. The keynote of his daily life was the overcoming of sin and disease, thus awakening man to his likeness to God. Because evil, discord, sin, and sickness had no place in the thought of Christ Jesus, he overcame them, and restored the likeness to God, health, and holiness. We know that in the presence of a little child, or a pure man or woman, the evil jest or impure conversation is silenced; so with the Master, evil and discord were rebuked by his presence and put to silence, so clearly did he manifest God's likeness. This, then, should be the daily endeavor of all who are enrolled under the banner of Christian Science. Each morning should be an awakening to do good, to walk in the steps of the Master, to silence evil and cast it out, to overcome sickness and sin by the realization of the wonderful truth that "God is all in all." Thus shall we be fulfilling the command, Be ye perfect; thus find our utmost satisfaction; and the peace which passeth understanding will be ours.

Daily Manna.

ADA J. MILLER.

IN our journey out of sense into Soul we have provided for us, each day, the "manna" we need. Each day's study brings a new unfolding of truth and these revelations are our daily bread. Through them we have "meat to eat" that the world knows not of, hence our sustained energy, sustained strength. Sometimes we murmur, as did the children of Israel; then the moral courage that leads us into the Promised Land hears the voice of Truth and calls, "Come near before the Lord," and the glory of Spirit appears through the cloud. Moses heard the message of Truth, and said to the people, "The Lord shall give you in the evening flesh to eat, and in the morning bread to the full." To-day, as truly as when the corporeal Moses led the children of Israel toward Canaan, we hear the voice of God, receive the message, and see the promise fulfilled.

In the evening we have meat. When the light of divine Love seems dim, we need the stronger statement, the more satisfying revealing; in the morning, when light is breaking, we have bread,—the life-giving, strength-giving revelations of Truth. Sometimes we murmur because we do not discern the truth more quickly, more fully. We forget that we are supplied daily with all that we can assimilate, and this daily supply must be of our own gathering,—our own discerning. The command to Moses was, "Gather of it every man according to his eating. . . . take ye every man for them which are in his tents." The thought of this daily supply destroys all sense of fear, gives courage to press on, strength to overcome our enemies,—the mortal mind beliefs and fears that would obscure the glory of the Lord, and rob us of our daily manna.

The Lecture Work.

BY A MEMBER OF THE BOARD.

THIS important branch of the service should be thoughtfully considered by the Field. The convenience and best interests of both the churches and the lecturers should be taken into account. The Field should realize that there are only fifty-two Sundays in each year, and therefore it is not possible to have Sunday lectures only. They should also remember that October and May have only thirty-one

days each, and therefore it is not possible to have all the lectures in these two months. Judging from the many calls for Sunday lectures and for dates in October and May, the lecturers might easily suppose that the Field had overlooked the above points.

The lecturers have a wide territory to cover. When a lecturer starts out on a trip his desire, very properly, is to utilize his time to the best advantage, both for himself and the churches. He could not do this successfully if he lectured only on Sundays and were idle the remainder of the time, for often he must go a long distance from home to give a lecture. Again, if all lectures were to be given in October and May the number of lecturers would have to be greatly increased.

The lecturer must arrange his trips long in advance, usually three or four months. He must consult time-tables, calculate distances, and allow for uncertainty of railroad schedules in many localities. As a rule he has arranged his dates before starting out, so that he cannot respond to way calls. When it is learned that an appointment has been made at a given place, other near-by places often send in calls for lectures about the same time; but the lecturer most likely has already given dates beyond this one, so that he has none open. Hence the importance of making early application. While in some places it may be desirable to have the lecture in an opera house, it is not always necessarily so. The writer has found that as good an attendance is had, and as good results obtained, where the lecture has been in a church or a hall of some fraternal society.

As to the above, and many other points which might be mentioned, the letters received by the lecturers often indicate a lack of thoughtfulness relative to the whole situation and the character of the work. These words are written with the hope of awakening a more careful consideration of both sides of the question, that the work may be done at less cost of time and correspondence and to the greater advantage of all concerned.

Perfect obedience would be perfect happiness if only we had perfect confidence in the power we were obeying.

Lay your whole life open before Him that He may control it. Do not let there be a day nor an hour in which you are not consciously doing His will and following Him wholly.

A personal service to your Lord, such as this, will give a halo to the poorest life, and gild the most monotonous existence with a heavenly glow.—H. W. S.

[Written for the *Sentinel*.]

To a Mocking-Bird.

ANNIE DINSMORE MC CLURE.

SWEET child of joy, that waking ever pourest
Out from a heart of love to Love's own heart thy lays,
Fitting and perfect.—He whom thou adorest
Hath wakeful ear for thy perpetual praise!

Morning, or noon, or midnight, list'ning mortals,—
Watcher or worker,—failing not to keep
The gates of Spirit, that beyond their portals
No treacherous foe within the fold shall creep,

Hearing thy hymn above all earthly clangor,
Filling the fragrant dark with melody,
Shall own thee first of all who ever sang or
Prayed, most constant worshiper to be.

High Priest of Love, before His altar swinging
Thy censer sweet of spicy, dewy sprays,
And, emptied of all else, His glory singing,—
Would I were like thee, little heart of praise!

Selected Articles.

A Decision Favorable to Christian Science.

In 1902 in New York, for the first and only time in this country, an indictment for manslaughter was found in consequence of the death of a patient under Christian Science treatment.

A great many people will remember the incident. Little Esther Quinby was taken ill with diphtheria and her parents placed her under the care of a Christian Science healer, Mr. Lathrop, and refused to permit any regular physician to prescribe for her. When the patient grew worse popular indignation was manifested, but the parents adhered to their belief until the little girl died. Then the indictment was found.

The case never got beyond the county court, and was decided the other day by Judge Platt in the defendant's favor on a demurrer. As the State could not appeal, the opinion of the higher courts will never be known. The decision was that the facts as set out in the indictment did not describe a crime under the laws of New York, because the parents had a natural right to prescribe treatment "within reasonable bounds" for their children in illness, and probably also because there was no malice and no intention to kill.

It is difficult to see how the court could have reached any other conclusion. The State has a right to punish manslaughter that results from culpable neglect, but to punish a person who causes a death in a loving effort to prevent death would be a mockery of justice. Theoretically at least the Quinbys loved their daughter more than they did their own lives, and did what they honestly believed was the only thing that could save her life. To punish parental fondness for making a mistake in such a case would be monstrous.

Another reason why deaths under Christian Science healing should not be punished, is that if the State begins to meddle with the treatment of disease it must go much further than this. If it condemns Christian Science it must also pass on the medical schools, such as homoeopathy, allopathy, osteopathy, eclecticism, and what not, and this would be a fatal *reductio ad absurdum*.

It is singular what indignation is produced by a death under Christian Science treatment as compared with a death under medical treatment. All the schools of medicine are expected to lose a patient now and then, but the moment a Christian Science healer loses one the community is up in arms, although in the long run Christian Science may be as successful in healing as any of the medical schools.

We are opposed to bigotry, either in religion, in politics, or in medicine. This is a free country and a free age. People who are as sane as we are must be as free as we are, even if they seem to us to embrace dangerous errors. Error is harmless as long as truth is left free to combat it, and no doctrine or theory was ever yet eradicated from people's minds by persecution and oppression.

Christian Science is no more scoffed at and persecuted than homoeopathy was when it was first introduced, and for all we know Christian Science treatment may yet become as popular as any school of medicine whatever.

Editorial in *Chicago Chronicle*.

Sermon against "Fear."

To the Editor of *The Press*.

Sir:—In your columns of Monday appeared a report of the baccalaureate sermon delivered to the graduating class of the Boys' Central High School on "Fear of God," the text for which was, "The fear of the Lord is the beginning of wisdom." To the undersigned it seems a very unfortunate proceeding, this inculcating of a sense of fear, or the developing and enlarging of an already established sense of fear in the minds of young men just about to go forth in the full strength of youth, with minds naturally trustful, sanguine, optimistic, and buoyant.

Solomon may have said, "Fear God," but Jesus the Christ taught that God is love, and often said, "Fear not." And he, better than any one before or since, knew the laws of physics, physiology, psychology, and metaphysics. He also knew the effects of fear upon the human mind and body. Aside from hatred and jealousy, fear is the most destructive of any of the mental states. In fact, hatred and jealousy have their root in fear.

Fear paralyzes the will, depletes the nervous system, and is the breeder of many forms of disease. It saps the vitality, befogs the mind, deprives one of ambition and success; it breeds distrust and faithlessness; it is the great destroyer.

The speaker said, "By fear a child learns to escape danger." On the contrary, fear entails and creates danger. One of old said, "The thing which I greatly feared is come upon me;" and another, speaking from bitter experience, said, "Fear hath torment."

It was also said in the sermon, "Fear is an element of social safety." "Without fear this would be a desert universe; there would be dulness and drunkenness of mind." "Fear of God gives one an understanding into the variety, the color, and movement of life, a wisdom and power of discernment and insight into human nature, a reverence of God and a deep affection and open heart for mankind." All of which statements seem untrue when considered in the light of the deeper understanding.

Fear is an element of social danger; not social safety. For it destroys; it arrays man against his fellows. Fear is cowardice. Fear repels; it separates. . . . It never cements or anneals, never attracts, and attraction is what makes the universe one. Fear produces rather than destroys dulness and drunkenness of mind. Instead of giving, it deprives one of the understanding into the variety, the color, and movement of life. Its presence blurs the sight, dims and distorts the vision.

The fearful man never sees people or things right. He is all out of balance himself and all he beholds seems distorted. All things and objects about him lose their beauty, attractiveness, and proper proportion. He misjudges and condemns his fellow-man. His heart is closed toward others. He loses friendship and caste, for no one enjoys the company of the fearful. The teaching of the fear of God is far from being an evidence of wisdom. It is the forerunner of nearly all other forms of fear. No one fears a friend, a parent, or another whom he knows loves him, and if one fear not his earthly father and human love, why should one fear the heavenly Father, divine Love?

Let the doctors of philosophy and doctors of divinity beware what they attempt to teach the sons of God.

H. BRADLEY JEFFERY.
The Philadelphia Press.

The following kindly words are quoted from the pen of Rev. L. C. Swallow, editor of the *Pennsylvania Methodist*.

"It was the pleasure of the editor to attend a Christian Science meeting on last Sabbath morning. We went because interested in the study of any claimant to popular favor that proposes to make people better by spiritualizing the senses, as opposed to the ever clamorous materialistic forces around us.

"The singing was participated in by all, and evidently came from the heart. The responsive readings were heartily rendered, and there was nothing in the teachings of Mrs. Eddy, as read at that service, out of harmony with a fair interpretation of Scripture, or with an enlightened reason.

"At the dinner-table, after service, we asked a Lutheran lady what she thought of Christian Science. She replied, 'I know but little about it, but from a somewhat extended acquaintance in the East, I am persuaded that its adherents lead most loving and lovely lives.' After all, 'A tree is known by its fruits.' There is much about Christian Science that we like."

Among the Churches.

Church Opening in Chanute, Kan.

The opening and communion services of First Church of Christ, Scientist, were held yesterday [July 9] at their new edifice recently completed on N. Forest.

The Scientists are greatly pleased with their new home, which is a very neat structure, nicely finished and prettily furnished.—*Chanute Blade*.

Advance in New York City.

Third Church of Christ, Scientist, took title last week to the old building of the Harlem Presbyterian Church, at Madison Avenue and 125th Street.

The membership of Third Church has grown so much of late that its present place of worship at No. 80 West 126th Street is inadequate, and it was determined to obtain larger quarters. The opportunity came recently, after the decision of the Harlem Presbyterian Church to erect a new building at Mount Morris Park West and 123d Street.

Negotiations for the purchase of the property were entered into, culminating yesterday in the transfer of the church at 125th Street and Madison Avenue to Third Church.

Third Church will occupy its new home some time in August.—*New York Tribune*.

Prison Work in Sioux Falls, S. Dak.

The first Christian Science service in the South Dakota Penitentiary was held Sunday morning, July 16. The attendance is optional with the prisoners, but nearly all (about two hundred) were seated in the spacious audience room before the service began, and all listened attentively and many of them joined heartily in the singing. Five copies of Science and Health have been put in the prison library and all are in constant use, while the copies of the *Sentinel* which have been supplied are eagerly read. The warden gave us every consideration possible, furnishing a carriage for us and attending the service himself. He expressed his satisfaction and invited us to come again, whenever our turn should come, among the other religious denominations which hold services there alternately.—FRANK G. MORGAN.

New Church Opening in Halifax, N. S.

Yesterday morning at eleven o'clock the Christian Scientists of Halifax, a steadily growing body, met for the first time in the building which they have recently purchased and which was formerly a part of the Starr estate. The service, which was largely attended, was era marking in the local history of the Christian Science movement, and the large number present, among them people of critical culture, would seem to indicate that interest in Christian Science has come to stay in Halifax as it has come to stay in London, in Boston, in New York, and all the great metropolitan centres. The service, which is the usual one of the body, was ideally simple, Mr. Howard Wilson being the First, and Miss Ethel Dimmock the Second Reader. Major Standen was the organist.—*Halifax Evening Mail*.

Infirmiry Work at Cleveland, O.

Starting in a quiet way Christian Scientists of this city have been carrying on a work at the city infirmiry which they hope in time to extend to the prisons, asylums, hospitals, and other similar institutions under the direct or indirect control of the city.

It was some months ago that a few of the Christian Scientists conceived the plan of carrying their work among the inmates of the city infirmiry. At that time they

did not desire any publicity, saying rather they desired to wait until their efforts in this particular direction had developed to a definite point. Now, after nearly half a year, during which time the work was carried on by the consent of the city authorities, it is given to the public that "most encouraging results have been obtained."

The work was started in a single room, a Christian Scientist says. Many infirmiry patients became interested, and the regular attendance largely increased. The authorities finally granted the use of the upstairs chapel. Since then it is stated that an average of over one hundred have attended each meeting. Those especially engaged in the work have reported as follows: "Many cases of healing have resulted, including cases of paralysis, erysipelas, diseased bones, and alcoholic and drug habits."

It is further stated by an active Christian Scientist that men who seemed utterly hopeless with disease and disaster have brightened up and now see that there is something in life besides the blackness of despair. It is explained that the Christian Scientist workers have gone among the inmates with bright, cheery faces fairly impelling many of the patients to throw off "their delusions of sickness and sin."—*Cleveland (O.) Plain Dealer*.

Washington, D. C.

One year ago First and Second Churches of Christ, Scientist, of Washington, D. C., established a union Reading Room, to supersede the rooms previously maintained by the two churches separately.

This year of united work has been a very successful and satisfactory one. The sales of literature amounted to \$2,451.21. The number of copies of Science and Health sold was two hundred and eighty-two. A large number of visitors also came to the rooms, many of whom were either strangers to Christian Science or strangers in the city.

As the outcome of this first year of work there has been sent to Mr. Chase the sum of two hundred and twenty dollars for the Building Fund of The Mother Church. To be able to have this part of the work identified with the building of The Mother Church is a cause of joy to those who are engaged in this service.

MARY B. CAMPBELL, *Librarian*.

Plans for a New Church, Lincoln, Neb.

Plans for one of the most expensive and beautiful church buildings in the city have been adopted by the congregation of First Church of Christ, Scientist. The new structure will be located on two lots now owned by the society at Twelfth and L Streets, and when it is completed will have cost in the neighborhood of \$60,000. As soon as the necessary arrangements can be made, work will be begun on a temporary building, which will be erected at a cost of between \$6,000 and \$7,000. This building will consist of the Sunday School room of the permanent building, roofed over temporarily.

The Lincoln congregation was organized in 1902. Today [July 9] twenty-five new members will be received into the church, making the net membership, deducting those who have moved away and severed their connection with the local congregation, two hundred and six. The congregation has been increasing in size so rapidly that the members are anxious for a building of their own, and have been looking forward for a long time to the new church home which is now assured.—*Nebraska State Journal*.

Serene will be our days and bright
And happy will our nature be
When love is an unerring light
And joy its own security.

WILLIAM WORDSWORTH.

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

Mrs. Eddy Buys Land.

SAYS the *Boston Herald* of to-day: A transfer of more than usual interest has just been concluded in Brookline, and deeds filed at the Norfolk registry, Dedham. The transaction conveys to Mary Baker G. Eddy of Concord, N. H., three tracts of land aggregating 171,622 feet, practically four acres, bounded by Holland Road and Seaver Street, and in one of the finest locations in Brookline, on Fisher hill, being a part of what was once the old Hancock estate. It is on a high section, overlooking the Brookline and Chestnut Hill reservoirs and the Beacon Street Boulevard. The property was acquired from three grantors: Charles H. Pearson, 50,346 feet, taxed on a valuation of \$22,000; William B. Rice, 13,150 feet, \$5,000, and Frank E. Simpson, 108,126 feet, \$42,000, making a total valuation of \$69,000, but the price paid was considerably in excess of this. It is understood that the new owner purchased the property merely as an investment. The title was passed through Mittie A. Whitcomb, and the broker was Henry W. Savage, Mr. Simpson being represented by Meredith & Grew.

The Boston papers of this morning declared that Mrs. Eddy's purchase in Brookline was for the purpose of building a residence for herself. In answer to an inquiry from the *Monitor*, as to the truth of this report, Mrs. Eddy made the following statement:—

"Nothing of the kind is contemplated. I purchased the lot to save some Christian Scientists from meeting a financial disaster."—*Concord* (N. H.) *Monitor*.

Editorial Courtesy.

It is a noticeable fact that editorial mention of Christian Science has become more frequent than formerly, while the tone of such comment as now appears in newspapers and magazines is much more kindly than heretofore, and we believe this is due in a large measure to the better understanding of the subject which has resulted from the work of the Board of Lectureship as well as that of the Publication Committee. One of the latest examples of this tendency toward a just and unprejudiced attitude in the discussion of Christian Science is the editorial which appeared in *Among the Clouds*, the interesting newspaper published on the summit of Mount Washington.

The occasion of this appreciative mention of Christian Science in "the only newspaper printed on the summit of any mountain in the world," was the lecture delivered by Judge Ewing last Sunday under the auspices of the little church in the White Mountains. The editorial is as follows:—

"It is with pleasure this morning that *Among the Clouds* devotes so much of its space to the address of Judge William G. Ewing, on Christian Science, delivered at The Mount Pleasant yesterday.

"The summer is the happy time of year. It is also, perhaps, the least serious of all the seasons. The out-of-door life, with its multiplicity of diversions, the coming and going of friends, and the flitting about to places, leaves one un-

mindful—or if not so, then with little opportunity—to visit his soul and learn anew those deeper truths which are the bases of all appreciation, enjoyment, and right living. So it seems especially fitting to pause in the onward march of summer events and to 'think on these things.'

"Whether it be the creed of the one church or the other, what all men are seeking is freedom from bondage, emancipation from all that retards progress, no more in the things of the flesh than in the life of the spirit. And certain it is that a more potent haven cannot be found in the minds of the people to-day than is Christian Science. It has taught that all power is within; that our inheritance is goodness, and our possession of it depends wholly upon our recognition of this truth and the denial of evil. With this faith the trials of a day leave no impress and even the vicissitudes of a lifetime bring no wound that the balm of perfect trust cannot soothe. Fear is eliminated. In every experience comes the question of Pilate, 'What is truth?' and as surely comes the answer: 'He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty,' for 'truth is within ourselves, and 'to know' rather consists in opening out a way where the imprisoned splendor may escape, than in effecting entry for a light supposed to be without.'"

ARCHIBALD McLELLAN.

Divine Guidance.

To be always sure of divine guidance would give courage in the face of asserted danger, but the sense of timidity and uncertainty which is so prevalent shows that mortals generally do not understand how to avail themselves of it. An experienced pilot, in speaking of the religious beliefs of seafaring men, said that many of them pray fervently when the winds blow, but through fear and a lack of skill in seamanship, they often take down their sails at the very time that the greatest progress might be made. In the last *Sentinel* (August 12) there is an interesting testimony, given by Captain Blackmore, which shows the value of spiritual understanding in a time of threatening danger. In describing the conditions to be met, he says,—

"We were blocked in the ice nine hundred miles southeast of Cape Horn. It was winter, and we had but a few hours' daylight. To mortal sense it seemed that nothing I could do would save the ship, with all on board, from destruction. Before night set in, I went into my chart-house and asked God, in spiritual prayer, to guide me out of this danger. I received my answer, which was contrary to all nautical experience, but I acted on it at once, and when daylight came I then had the proof that God had saved the ship from destruction. Daylight revealed to all that the course which the ship had sailed over was now completely blocked with icebergs from five hundred to a thousand feet high."

In this case the courage needed to go boldly forward was no mere bravado, but it sprang from the assurance of divine guidance and protection, based upon the understanding of the power which stills "the raging of the sea." Before such a recognition of Truth, danger departs as darkness before the light. This understanding of God's ever-presence and all-power brings a wonderful lucidity of thought, which enables us to go forward in every emergency, with calm reliance upon divine wisdom. The experience referred to recalls that of St. Paul, when on his way to Rome. Here nautical skill neither foresaw the danger nor was able to cope with it, but the brave apostle was divinely guided, and though only a prisoner, in passage, he was able to give the counsel which saved the lives of all on board. His stirring words to his associates in peril may well arouse to higher issues those who have a waning sense of faith in God. He told them of a divine promise of guidance and safety, and said, "Wherefore, sirs, be of good cheer: for I believe God, that it shall be even as it was told me."

Until the troubled waters of material belief are passed, we may encounter storm and tempest. Sickness, sin, sor-

row, or threatened loss may darken our way, but Truth is ever near, to guide us to the haven of peace,—the safe shelter of divine Love. Guided by wisdom, we shall know both when and how to emerge from our troubles, how to advance without loss of time or wasted effort. With each successive experience we shall learn to value more highly the lessons of Christian Science, which enable us to discover the way and appreciate the discipline of divine Love. Mortal sense laments over supposed afflictions, while spiritual sense, illumined by Science, sees the divine guidance and the assured deliverance. Thus awakened we shall be able to realize the promise, "Then shalt thou call, and the Lord shall answer; thou shalt cry, and he shall say, Here I am . . . and the Lord shall guide thee continually."

ANNIE M. KNOTT.

Letters to our Leader.

Stamford, Conn., January 30, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—My heart goes out to you with unbounded love and gratitude for your untiring efforts in bringing to us this blessed truth. I was an invalid for a number of years, and through one of your most loyal and faithful students my eyes were opened, and I was not only healed, but through his beautiful teaching I have gained enough understanding to help others. I feel that I can only show my deep gratitude by consecrating my life to benefit mankind. It has been my privilege to start two churches, each in a place where Christian Science was entirely new. Three years ago our first service was held here in Stamford, in a private house, with five people in attendance. Now we have the most desirable hall in the town for our exclusive use, with a membership of over forty, and an attendance which is about double that number. Our annual meeting, which took place two weeks ago, was a very harmonious one. New Readers were elected for the next three years, also other officers for the church work. God raised up those in our midst who were well qualified to fill these positions, for which we are thankful. During the three years we have had many trials, but divine Love guided us over every wave of error, and we have learned that each trial has made us stronger. At times I have been tempted to feel a sense of loneliness and inability to meet these problems without help, but my teacher—whose address is Chicago—was so far away that I could not go to him, and I have thought so often of you, our dear Leader, how alone you have stood for the truth. "The Mother's Evening Prayer" (Miscellaneous Writings, p. 389) has been my prayer.

Words are inadequate to express my sincere love to you for showing me the way to heal the sick and to feed the hungry. I want to tell you of a lesson that you taught me under most peculiar circumstances. You may recall the incident, although it happened five years ago last October. I had at that time been interested in Christian Science about five years, and during those years had a most ardent desire to see you, but as my home, which was then in Indiana, was so far away, I had not had an opportunity, until this time. The street in front of your home was being macadamized. I drove past and then turned to go back, and as the carriage was exactly in front of your gate there was a blockade of work-teams, and I was forced to stop. Your carriage was at your door, waiting for you, and I thought, Now I can see Mrs. Eddy when she comes out. Just as you came out, the blockade was broken and my driver started, but to his surprise the horse could not go, something had happened to one foot, and he could not step. He plunged and the driver told me to get out on the sidewalk. A crowd of men gathered around, and they used a knife to see if anything had lodged in the hoof, but nothing was found that could have caused the trouble. I stood there humiliated, for I knew it a breach of etiquette to stop in front of your gate. You leaned out of your carriage and

looked as if to ascertain the cause of the trouble, and then bowed to me as you drove off. Almost immediately I felt a sense of rebuke, that in my desire to see you I had forgotten to treat the horse, and something said to me, "Are you about your Father's business?" I felt the rebuke keenly and turned to the horse at once, but it had already been relieved. The healing thought had gone out from you; the horse was healed, and so was I, of a sense of personality. The driver said that he had never experienced anything like it before. Jesus said, "What went ye out . . . for to see?" I went to see a woman, a noted woman, and I saw love, love beyond the description of words. On my return home I was enabled to heal, in a short time, a severe case of illness which I had been treating for some weeks.

I have had many beautiful lessons taught me, but nothing that ever awakened me so quickly from the dream of matter to Spirit, and my earnest desire is for that Mind to be in me "which was also in Christ Jesus."

Faithfully and obediently yours,

MRS. ELIZABETH R. RIDDELL.

[Cablegram.]

London, August 6, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

The congregation of First Church of Christ, Scientist, London, England, joyfully unite in sending our dear Leader loving greetings, at close of this our first service in new building.

Paris, July 10, 1905.

Beloved Leader:—It is with a sense of the deepest love and gratitude to you that the members of First Church of Christ, Scientist, in Paris, France, are forwarding to-day to the Building Fund of The Mother Church, a draft for two hundred and ten dollars, the amount of a special collection taken at our Communion service on July 9, just past. We feel it a great privilege to have any part in the completion of The Mother Church, which is near to your heart. We hope that it may give you pleasure to know also that all translations of Science and Health in the church in Paris were discontinued the first of June last, and that free English classes had previously been opened, in order that those French people who were already interested in Christian Science might be enabled to read our text-book in the language in which you gave it to the world. We felt sure that any seeming loss to them, owing to the discontinuance of the French services, would be more than compensated by making it possible for them to do their own work through the direct study of Science and Health. In taking this step we have been actuated solely by the desire to follow you with absolute loyalty and obedience, not only in the letter, but in the spirit.

Yours affectionately,

ELIZABETH S. RACKEMANN, *First Reader*.

FRANK KING CLARK, *Second Reader*.

MAUDE O. CLARK, *Chairman of Board of Directors*.

Dublin, Ireland, July 12, 1905.

Rev. Mary Baker G. Eddy.

Beloved Leader:—For the last seventeen months we have sent the collections from the services on the first Sunday of each month (altogether £55 16s 11d) to the Building Fund of The Mother Church. Through this demonstration our faith has been strengthened and our gratitude and love have increased. In response to the article in the *Sentinel* of May 27, we called a special church meeting for June 9, and then decided to open a subscription list, to enable members to send in further contributions. As a result our treasurer has received £93 13s 6d. This sum he is for-

warding to-day, together with our building fund, amounting to £7 6s 5d, to Mr. Chase.

As a branch church we want to express our deep love and gratitude to you, our beloved Leader, for having given us the great privilege of doing our part towards the building of The Mother Church.

Yours lovingly,

LOUISE KING, *First Reader*.

First Church of Christ, Scientist.

Ochiltree, Texas, June 3, 1905.

Dear Mrs. Eddy:—After several attempts, I will tell you how Christian Science is blessing and making happy our home. I will also tell you something about this country. It is thinly settled, a level plain, and it is known as the great western cattle range. All the water is supplied by wind-mills, and it is a very pretty country. Every few sections there is a family, and they are all striving to get as big a herd of cattle as possible, but the winters are so very hard here that all have great difficulty in getting their cattle through. Last winter everybody around us lost heavily, and some were nearly broken up; but we never lost one head of ours, and it was all because I denied every claim of error that came up.

My dear husband has begun reading the Lesson-Sermons with me. We have three little girls, and last summer I had a grand demonstration with the baby over cholera infantum. I shall never forget that trial and the bravery the little one expressed in truth. It was in this demonstration that I realized what a blessing your work is to all mankind. Now everything is bright and sunny, and we enjoy more and more the true way. I could quote many passages from your works that have helped me on my way. I enjoy singing and playing from the Christian Science Hymnal, and our little girls sing "Shepherd, show me how to go," and say their prayer every night from "Miscellaneous Writings." I hope this is not too long, and I trust that I may live as near you as possible.

IONE ASHBY.

Hamilton, O., July 19, 1905.

Rev. Mary Baker G. Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—I feel impressed to write and let you know how much good this beautiful truth, as taught by you, has done me. My whole life has been transformed. I have been "born again;" in my home is happiness and harmony, where all was discord and strife. Then why should not my heart overflow with love to God, and to you, dear Leader, for this newness of life. Let me relate a little experience which came to me a few days ago. I seemed to be so burdened with an affair I could not shake off. I hardly knew what to do, or which way to turn, and being in that state of mind for a few days, I happened to turn around and my gaze rested on a little frame on my wall. It contained your article, "What Our Leader Says." I began reading,—fairly drinking it in,—and when I came to the words, "Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort;" also, "His thoughts can only reflect peace, good will, health, and holiness," such a calm and peace came over me, I knew I had received what I seemed to need. I had been letting in unkind thoughts, and right then I consecrated myself anew to God, desiring always to keep my thought pure, to try and reflect love and good will.

I thank you, oh, so much, dear Leader, for that message; it now means so much to me. I thank you again for all your writings. Sometimes the thought comes to me, What would I do without Christian Science? I silence it with, What am I doing, or what can I do for Christian Science? Much, I hope.

Yours gratefully and lovingly,

MRS. LULU MAY CLARKE.

Testimonies of Healing.

At the time Christian Science was first presented to me, six years ago, I was a miserable, unhappy person. Having undergone a number of surgical operations, I was indeed a very sick woman, both mentally and physically. A copy of "Science and Health with Key to the Scriptures" by Mrs. Eddy, was loaned to a friend of mine, and occasionally, when calling on me, she would bring the book and read to me. I seemed to be in such a disturbed mental condition that I was at first able to comprehend only a little, but I will always remember how the words, "God is Love," sounded to me, as my friend read them. I never could believe in a personal God who dwelt beyond the skies, and my only prayer had been that God would guide me aright, and now my prayer was answered. Whereas I was miserable and overwhelmed with fear, I am now happy and well, and the joy that I experience is not due alone to my own healing, but is also due to the knowledge that we can assist others who are in bondage to sin and sickness, by the right understanding and application of the teaching of our dear Leader.

About two years ago my little niece was ill with scarlet fever, for several weeks. The case seemed hopeless, and when the attending physicians finally informed my sister that they could do no more, she then turned to Christian Science. The dear little child was so emaciated that she was a mere skeleton; both sides of her throat had been lanced, rendering her unable to eat anything at all. Three days after turning to Christian Science for help, she began to talk and asked for something to eat. She gained rapidly and was soon strong and well again. Christian Science has filled me with a constant desire to know more of God, and has led me to study and love the Bible. As I learn to live its teachings, which are made clear by our text-book, *Science and Health*, I am able to realize that God is an ever-present help in time of trouble. I am thankful that the truth was given to us in this age.—MONNIE E. DAVIS, Joplin, Mo.

The Psalmist bids us "give thanks unto the Lord; . . . make known his deeds among the people." About a year ago I lost the sense of hearing in my right ear. I was greatly embarrassed many times, and also inconvenienced in my work on account of this seeming calamity, but divine Love protected me from any remarks, or from notice being taken of this condition. I had come to recognize the fact that we must hold to the unchanging harmony of being, whatever be the material evidence to the contrary, and I knew that this recognition of reality would prove the healing power of divine Love, for I was learning that man has not two bodies, or lives, one of which is to be made perfect. I found great help in the statement given in our text-book (page 306, lines 25 to 28), and in about six months I was healed.

As I look back over the past four years, and dwell upon the countless proofs of God's loving care manifested to me, I know that these words, "The eternal God is thy refuge, and underneath are the everlasting arms," are true, for to know God is eternal life, and to understand this, even in a small degree, is to be subject only to divine law. About three years ago it was manifested to me that electricity is powerless to harm us if we hold firmly to Truth; and that life is never at the mercy of matter. At that time I was employed as stenographer in an institution on an island. Among my duties, I had charge of a local telephone switch-board, and a city telephone or small switchboard. The local board had about twenty connections, but the wires were not properly grounded, so the electrician informed me afterwards. The city board was rightly installed and considered perfectly safe during thunder-storms. One Wednesday, when all was quiet in the little office, and the elements raged outside during a severe thunder-storm, I was reminded that the material sense of life is like the storm, but Science, the Word of God, the "still, small voice" that Elijah heard, had whispered into consciousness that man's life is in Mind.

As I had nothing else to do at that time, I began writing my first testimony for the *Sentinel*. In the midst of my writing there was a terrific explosion and a large ball of fire burst at my feet. Two men instantly came into the office and seemed astonished to find me unhurt, telling me that I had certainly had a very narrow escape. They both remarked the very strong odor of sulphur and seemed surprised at my calmness. The wires and fuses of the local switchboard were all burned out, as was also the city telephone, and the latter had to be replaced with an entire new instrument. My chair was situated between the two instruments and my back was against the local board. This experience absolutely proved to me the correctness of our Leader's statements on the subject of so-called material force. (Science and Health, p. 293.) That night I testified in our meeting respecting my experience. "He shall thrust out the enemy from before thee; and shall say, Destroy them."—NELLIE ROSE NIXDORF, New York, N. Y.

I wish to express my gratitude to God for all the blessings that have come to me through Christian Science. About five years ago, I was forced to resign my position and go home,—a physical wreck,—suffering from dyspepsia, catarrh, and female troubles. These, coupled with intense mental suffering, made life seem not worth living. After drugging and dieting for some time, I lost all faith in material remedies, and turned to Christian Science without knowing much about it, but determined not to accept any more than the physical healing.

I was wonderfully healed, physically, morally, and spiritually, and in less than two months I returned to work, and have not lost a day or an hour through illness since.

The truth has been a great help to me in times of trouble and persecution, and my prayer is that I may live nearer the true Life. I give thanks to Mrs. Eddy for Science and Health.—LILLY MORTON, Kingston, Ont.

In thinking of the many blessings for which I am grateful, I would like to tell others of the following case, which is an especial cause for gratitude. One morning, about five years ago, the 91st Psalm was my first thought upon awaking, and as I repeated, "There shall no evil befall thee, neither shall any plague come nigh thy dwelling," I felt very thankful. I little knew how soon I would be called upon to prove this declaration. At half past eight that morning, a member of my family spilled some ammonia over her face, also into her eyes. It seemed so terrible to mortal sense, that I made an audible declaration of truth,—repeating again the 91st Psalm, also the "scientific statement of being" (Science and Health, p. 468). At nine o'clock the pain had abated; at half past nine no sign of inflammation was visible, and all pain had ceased. A sense of weakness was immediately destroyed. At ten o'clock she attempted to read, but the suggestion came to her that she could not do so. This was followed so quickly by the truth that it disappeared like mist before the sun. She read during the day, and by gaslight in the evening. Only one treatment was given, and nothing was left of the seeming gloom of the morning but hearts full of gratitude and thanksgiving. Had I never had another proof, this alone was worth all the effort I had made to gain a little understanding of the truth that makes free.

I cannot close without giving a loving tribute to our Leader, Mrs. Eddy, who guides so faithfully and tenderly our journey onward and upward.

I am very grateful for the Manual of The Mother Church and all our literature. They are beacon-lights to guide us on the way.—MRS. BETTIE F. BRINKER, Denver, Col.

It is now two years since I came to Christian Science for healing, and I was not left comfortless. My need was very great. I was a physical wreck, having gone through one operation and being threatened with another. I had nothing to depend on for my living but my own efforts and those of

a little daughter. I was greatly discouraged, for I had tried *materia medica* only to be condemned to lifelong invalidism. Finally, a friend advised me to try Christian Science, and I went to a practitioner. I sat sobbing all the time, during the first treatment, and was scarcely able to tell her of my condition, but I went away with a lighter heart, and next day was able to tell her all. Under her direction I left off a brace which I had worn for nine months, and never missed it, except in my relief from the disagreeable sensation caused by wearing it. In ten days, work was provided for me, and I was able to do it, something my friends thought I would never be able to do again. In six weeks I was well, and I have grown stronger and gained in weight right along. Peace and harmony have come into my life, and the way grows brighter as I gain more understanding. From being a diffident, self-conscious woman, I have grown to be independent and helpful. There have been many things to meet, but Christian Science has proved sufficient for every need.

I am very grateful to our dear Leader, who has so patiently worked and prayed for the understanding which she has given to the world in Science and Health. I am also grateful to all who contribute to the *Sentinel* and *Journal*, from which I receive so much help.

MRS. M. P. TABER, Spokane, Wash.

The desire to help and encourage others constrains me to add my simple testimony of benefits received from Christian Science. I first heard of it a year ago, when on a visit to friends. I had been suffering many years from various complaints, supposed to be the result of a constant formation of excessive quantities of uric acid. I was rigidly dieted, and had to avoid damp, east winds, and over-fatigue. My physician stated that these precautions were essential to my tenure of life. For more than forty years I had suffered from varicose veins in my legs, which had necessitated my wearing six yards of bandage on each, elastic stockings being of no service. The study of our text-book began to awaken my consciousness to understand my relation to God; it revealed in some degree the presence of Truth, and explained the power of Love. Chronic constipation disappeared, rheumatism was combated, the alleged dietary laws were gradually discarded as being inconsistent with the law of love and liberty, and our Saviour's commandment, "Take no thought . . . what ye shall eat." Subsequently, an acute attack of sciatica was overcome in three days. Finally the bandages were laid off, and a complete demonstration over the varicose veins obtained. Some few months after this, eczema attacked my legs, but this also was vanquished. My health is now established, or rather the diseases which for years seemed so terribly real have been disestablished.

I know that death is no friend, and I long to rise to clearer views of the eternal verities of being. In the mean time I see enough to feel the deepest gratitude to Mrs. Eddy and her followers.—E. COLDRIDGE, London, Eng.

Over sixteen years ago I was healed of chronic invalidism, which had baffled the skill of the best physicians known to me. One of them told me it was necessary for me to go to a surgeon in New York City and submit to a surgical operation. The thought of this operation filled me with so much dread, that it resulted in my going to see another physician, who informed me that there was no necessity for any surgical operation. I remember how I wondered at two prominent and trusted M.D.'s contradicting each other, in diagnosing my case. I continued trying for many weary months to get well. I tried several physicians, electric baths, magnetic healing, and even gave an old Chinese doctor's nauseating doses a trial. I was, indeed, like a drowning person grasping at a straw, when three different friends told me of Christian Science. Never having heard of it before, this seemed significant, and I resolved to go to see a Chris-

tian Science practitioner. There are no words to express what I would like to say of this wonderful healing, so different from all the other methods which I had tried. My first symptoms of recovery were manifested in an eager desire for spiritual things, and in praying as I had never known how to pray before. I actually enjoyed performing duties that had been irksome to me prior to the time I began to take Christian Science treatment. When the practitioner told me I would be entirely healed and that I need not fear to dispense with all the material remedies I had depended on so long, it seemed too good to be true, but I learned that man's extremity is God's opportunity.

I am now a living witness to the power of this healing, saving truth. I "know that all things work together for good to them that love God," and can say from my heart that I am thankful even for the dark hours and bitter experience, because they led me to seek the true healing and true living which cast out all fear.

MRS. SALLIE N. CHANDLER, Kansas City, Mo.

I desire to add my testimony to those of others. Years ago, when a member of an orthodox church, I so longed for the true religion that would teach me how to live every day and every hour; and my prayers were answered when I learned of Christian Science, which came to me in time of sorest need. I had this treatment at the birth of my youngest child, six years ago. It was a beautiful demonstration. I was dressed and walked out of the room the sixth day. At the birth of my little girl, two years before, I had been for eight weeks under the doctor's care. A few months later, my husband was taken sick with lung trouble. He was under the doctor's care, and the children being small, and for lack of means, it seemed necessary for us to live with his parents, who were willing to do all they could for us, but who were very much opposed to Christian Science. In the mean time, I had learned in Christian Science that God is my Life, and I could not live without this truth. The three years following this, I depended entirely upon it for health and strength. The children were, however, under the doctor's care, according to their father's wishes. He passed away, leaving me alone with three little children and but a very small sum of money. With the love of some dear Scientists, and what understanding I had of the truth, I felt rich indeed. Kind relatives offered me a home, but they had no use for the religion I loved so well, and opposed it for the children's sake. I knew that God is the source of all supply, and turning a deaf ear to error, which said I would lose my children and come back on bended knee, I listened for the voice of Truth and went out to live alone, so far as the sympathy of relatives was concerned. I rented a house and work came in that I had never done before on account of ill health, but with the health that Christian Science had given me I was able to do it, and earn from six to eight dollars per week and take care of my children. A Scientist friend bought a home for me and I took it on the instalment plan. A way was provided, and my home was free from debt in one year. During this time we had many beautiful demonstrations of God's care and ever-present help. My little girl was healed of convulsions in one evening's treatment; and now, instead of the children being subject to croup and various ailments, they are subject to health and obedience, and to-day we rejoice in the glorious freedom which nothing but Christian Science can give.

My heart is full of gratitude to our Leader, Mrs. Eddy, through whose teachings I have been led from darkness into the light.—MRS. ALPHA SPAULDING, Riverside, Cal.

It is over six years since Christian Science was first brought to my attention, by the healing of my brother's wife. He wrote me of her healing, and advised me to try Christian Science for earache, or abscess in the head, from which I

had suffered more or less since childhood, and constantly for over a year. I had tried nearly everything in *materia medica*, with no relief. My brother offered to send me some Science literature, and even sent the address of his wife's practitioner, but I knew nothing about it, consequently did not believe in it. About this time, however, a young woman of our town returned from California after a year's visit. She interested many in Christian Science, which the people then called a fad. Through this a church has been organized, with a large Sunday School, and a building has been erected. After hearing of my suffering she brought me some Christian Science literature, which I tried to read. Through her faith, and her loving persistence, I consented to be treated, and in less than two weeks the ailment was entirely overcome, and several others also disappeared. Since then, every ailment manifested by myself and my three children has been met through the understanding of Christian Science. I would like to speak of a recent demonstration. I was returning home from the Wednesday evening meeting, and as I stepped from the car I did not notice that the sidewalk had been partly removed. My foot went between some planks, and I fell so that my knee struck the edge of one. A crowd was soon around me, with exclamations of pity and fear, and as some one tried to help me, I said I was all right. They lifted me and I walked into the station. I began to declare the truth, for to mortal sense the pain was very severe, but I walked six blocks with no inconvenience and reached home. The next day I found that my knee was very badly bruised, and I again realized the truth and the needed help came to me quickly. Words fail me to express what Christian Science has done for me.

MRS. M. A. BRODAHL, St. Johns, Ore.

I have enjoyed the blessing of Christian Science for about six years, and have been so wonderfully helped, both through treatment and the study of our text-book, that I feel it to be my duty to give my testimony to the Field. For more than sixteen years I suffered from many ailments. From birth I was subject to cramps in the stomach, and as I grew older a serious trouble developed.—I was in constant distress, and lived mostly on tonics. I tried all kinds of physicians—allopathic, homoeopathic, and specialists. At times I improved slightly, but fell back again, until my nerves became shattered and I was taken home, ill, with what was pronounced nervous exhaustion. This was followed by three shocks of paralysis in one year. The four physicians I had at this time, shook their heads, and it was in this darkness that I prayed to God to heal me if I could be of use here, and if not, to take me. My parents were good Christian people, and when my mother asked me if I were going to die, I answered, No; for I felt there was help for me somewhere. I could not think of anything I had done to deserve so great a punishment. Many a night I cried myself to sleep, thinking there was no God, or that He would hear and answer my prayer; but I did not understand God then as we learn to understand Him in Christian Science.

One evening I heard two people talking, and they mentioned the name of a Christian Scientist. This impressed me, and I did not rest until I found her and commenced taking treatment. Although my healing was not immediate, I was completely lifted out of spasmodic limping, caused from an injury to the knee when I was eleven years of age. Then I laid aside my glasses, which I had worn for eight years, and was healed from indigestion, appendicitis, inflammatory rheumatism, and from another shock of paralysis, when Christian Science literally snatched me from the grave.

I have learned that God is my Life, and my heart goes out in gratitude to the divine Principle and sender of all good, and to Mrs. Eddy who has shown us the way so nobly. I daily pray that I may become more worthy of him who said, "Lo, I am with you always, even unto the end of the world."—MRS. J. T. SCHULTE, Minneapolis, Minn.

I have been helped very much in the past two and a half years by Christian Science, and desire to tell of some of the benefits received. I am better morally, physically, and spiritually. My thought goes out in gratitude to our Leader for Science and Health, which has given me a clearer understanding of God and the Bible. I have had a sense of lack to meet, owing to my husband being out of work, but day by day, as every need came up it was met by divine Love. A year ago, at the birth of my last baby, it was thought best to engage a doctor. The baby was born before the doctor came, without any pain, such as I had when my other children were born. A Christian Scientist then took up my case. I felt no weakness, I was up on the fourth day, and each day afterwards. Baby has never had any medicine, and she is a bright, well-developed child. Since coming into this Science I have never used medicine for myself or children. All ailments have been met and destroyed by Truth. A short time ago, one of the boys was taken with croup. Knowing that it must be overcome at once, and fear creeping in, I immediately sent for a kind friend who is a Christian Scientist, and within an hour the child was sleeping quietly. We have been helped in many other ways, and I have a happiness and joy that I had not before.

I am thankful to Mrs. Eddy for Christian Science, which has helped me to know Truth.

JANE BELL, Newcastle-on-Tyne, England.

Before learning of Christian Science, I had very poor health. I had gone through several operations and was threatened with another, until I thought there was no help for me this side the grave. I had never heard of Christian Science until one day when, alone in my home, I became so ill that I lay on the floor, unable to get upstairs. A neighbor heard my moans and came in. Alarmed at my condition, she called others, among them a trained nurse, who had a case near by. She wanted to get me morphine. After quite a time I was gotten upstairs, and to bed. They had telephoned for a doctor, and one of the women looked out of the window and said, "O I wish that doctor would come." I said, "It is no use; doctors do me no good, only God can help me now." I then noticed that a stranger, who was sitting by my bed, put her hand over her eyes. I thought she was praying. The pain was almost unbearable and there seemed to be such a noise, like the sound of the sea, that I thought the others must hear it. Then suddenly there came a hush, a calm,—it was truly Peace, be still,—and all pain left me. As I raised my eyes I said, "Oh, there is something in this room helping me; I am well. I have no more pain." Then this good woman told me that she had given me Christian Science treatment.

In a few days I was able to read some of the books, and soon began to study Mrs. Eddy's works, and am grateful to relate that I have had much success in healing myself and my friends. I have now but one ambition in life, and that is to be able to help others to understand this blessed truth.

Words fail to tell all my gratitude; as I cannot express myself very well in English I take this way to testify for Christian Science.

MRS. DAGMOR NORLANDER, Pittsburg, Pa.

It is with a heart full of love to God that I write my expression of gratitude for the gift of Christian Science. This blessed truth was brought to my notice by a dear sister, whose afflictions had given place to health and happiness. I longed for the text-book, and securing one at the city library, I read it, but without much understanding, as I was so full of gloom and darkness, and it was laid aside. As time went on I was in despair, until one year ago when we moved to Lincoln, Neb. The desire then came to me to attend the Christian Science Wednesday evening meeting. I did so, and found so much peace and contentment that I decided to learn more of this truth. I took it up again,

earnestly and prayerfully, and in a short time I was able to lay aside my glasses, which I had worn for nine years. The last oculist I consulted, two years ago, said I had a very bad case of astigmatism, and gave me another pair of glasses. He said I should wear them constantly, but I have not had the least discomfort since laying them off, and there is scarcely an evening that I do not read until half past nine or ten o'clock, something I could never do before without great suffering. I have received many other blessings; headaches, nervousness, constipation, have been healed, and I know I am a better woman mentally, morally, and physically.

I thank God and our dear Leader for this blessed understanding of God and man, as revealed in Science and Health. I am now a member of First Church of Christ, Scientist, of this city, and am striving daily to work, watch, and pray that I may reflect more of Truth and Love.

MRS. HARLE BROOKHOUSER, Lincoln, Neb.

I feel it a privilege and pleasure to give my testimony of the healing of a glandular tumor, or wen, on my head, the growth of many years. I was often advised by physicians and others to have it removed, but the dread of the knife prevented. It had attained to such size as to inconvenience me much, and during the past summer it became inflamed and sore. I had absent treatments by a Christian Science practitioner in St. Louis, and in about five weeks it disappeared entirely. I certainly am grateful to Mrs. Eddy, through whose untiring, faithful study and arduous labors this new-old Christ-teaching has been revived, giving us the "Key" which opens to us spiritually the Bible that was hitherto interpreted materially.

MRS. PAULINE E. N. RUSH, Boonville, Mo.

I would like to tell my little brothers and sisters, through the *Sentinel*, how I have been helped through Christian Science. When it first came to my home, I was suffering from a cough, and it always seemed to be as bad in the height of summer as in winter, and when a fit of coughing seized me, it was very distressing. I am thankful to say, through Christian Science it has been destroyed. I did not always put Christian Science into practice at school, until my mother told me if I did not work I would not prosper. I am ten years of age and love to go to the Christian Science Sunday School. I am trying to practise love and obedience. I am thankful to God and to Mrs. Eddy for Christian Science.

EMMA S. W. GIBSON, Newcastle-on-Tyne, England.

I desire to give grateful acknowledgment of Truth's gentle ministration, which has bestowed numberless blessings upon me. Christian Science has been a harbor of safety in times of threatened distress. I especially acknowledge the possession of much peace, a blessing which I appreciate keenly after a storm-swept existence that knew neither peace nor quiet. This alone is to me a priceless boon, after testing the unsatisfactory nature of all material things. I am also gaining in a measure the abiding joy of the spiritual life. I am an interested reader of the *Sentinel* and could not now do without it, as its articles and testimonies are so full of faith and hope and good cheer.

FLORENCE INA TAYLOR, Omaha, Neb.

O Peace! thou source and soul of social life;
Beneath whose calm, inspiring influence
Science its views enlarges, Art refines,
And swelling Commerce opens all her ports;
Blessed be the man divine who gives us thee.

ANON.

From our Exchanges.

To be a follower of Christ is a very different thing from acquiescence in the present order of society, conformity to the standards of our time. No man is burned at the stake to-day for his faith, nor is any man driven into the desert in order that he may keep himself pure; but in the twentieth as in the first century, he who follows Christ must separate himself in aim and practice from the society about him. For him, as for the earliest lover of the Christ, there must be a decisive and dominating choice between the aims and standards of his age and the aims and standards of the Christ. The outward conditions have changed, but the inward necessity is as great as ever; for no man can belong wholly to the world of his day and to the Christ of centuries, the God of the eternities. No outward dress marks the lover of the Christ; no unescapable necessity of protest against the entire social order separates him from his fellows; there is no sharply defined path of outward non-conformity in which he must walk; but let no man lull his conscience and silence its questions by mere acceptance of conventional Christian standards, unresistingly yielding to the external Christian movement of his time. For every real follower of the Master there is appointed the silence and solitude of the desert, the testing of temptation, the sharp and final detachment from widely accepted aims and ideals, the consecration to the principles and spirit of one who came not to accept but to uplift, to change, to put the heavenly in place of the earthly in the hearts of men.

The Outlook.

There is also another way of looking at life which, in an even more satisfactory way than the hope of the future, will make life seem well worth living, and it is just as Scriptural as that. This is the life which is lived in continual and conscious fellowship with God. To move through this world always in touch with the forces which move the world and shape the lives of men; to be in intimate contact with the Mind which directs and watches over the complete courses of the universe; to work always in harmony with the plan which is certain to arrive at a successful consummation; to be sure that every step is in advance, that every act is effective, that every wish is in line with the Great Will, that every decision is right, that every purpose is parallel with the progress of things, that every labor is aided by unseen forces, that every thought is prompted by the Perfect Mind; in fine, to feel that the life we now live is molded and aided and made certainly successful in a perfect sense; this is to live a life which is worth living and which we will know every day and every moment to be worth living.—*The Watchman.*

Somewhat we must see the future if we are to do the best possible work for God. The man who beholds the oak in the acorn, the harvest in the seed, the perfect and beautiful flower in the unsightly bulb, is the man who brings things to pass in the work of the kingdom. In every religious organization there will be found people who have no vision of things that are only potential. The work of God goes forward in spite of them, because of the elect few who see the unseen and toil to translate the ideal into the real. The prophet of righteousness, the man who exalts the hidden or unrecognized truth, who calls his fellows to the height of moral living, who leads to victorious battle against the forces of evil, is always one who has power to conceive of that which the eye cannot see or the ear hear.—*The Standard.*

People are learning, as never before, that the word "Christian" is much larger than any denominational name, and that the name "Christian" must be carefully interpreted, or it is less inclusive than human.

REV. DR. PHILLIP S. MOXOM.
The Christian Register.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of **SCIENCE AND HEALTH**, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in **SCIENCE AND HEALTH**. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to **JOSEPH ARMSTRONG**, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to **WILLIAM B. JOHNSON**, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to **STEPHEN A. CHASE**, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.

Supplements to the Sentinel

CHRIST AND CHRISTMAS. An illustrated poem.
Single book, prepaid \$3 00
Twelve or more books to one address, each, prepaid 2 50

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pp. Leatherette covers, gilt top. Prices, prepaid, 37 cents; \$3.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; \$2.50 half dozen; \$4.50 per dozen. Leather covers (pocket), \$1.00 each; \$5.00 half dozen; \$9.00 per dozen.

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedictory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, \$1.06; \$5.00 half dozen; \$9.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, \$2.50.

CHRISTIAN SCIENCE versus PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers, 21 pages. Prices, prepaid, 26 cents; per dozen, \$2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, \$2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, \$4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; \$4.50 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church. Prices, prepaid, one copy, \$1.00; six copies to one address, \$5.00; twelve copies to one address, \$9.00.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; \$2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; \$5.00 per dozen.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

240 Huntington Ave., Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor.

JOHN B. WILLIS, ANNIE M. KNOTT,

Associate Editors.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, \$1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, \$1.40; one hundred copies, \$2.65.

Entered at the Boston, Mass., post-office as second-class mail matter.

Items of Interest.

National.

In a recent gathering, representing all parties, in Porto Rico, the following memorial was adopted and the appeal made that,—

The House of Delegates shall continue as heretofore, elected by popular vote and composed of thirty-five members; that instead of the Executive Council there shall be an Insular Senate composed of fourteen Senators, to be elected, two for each one of the seven districts into which the island is divided; that these two legislative branches shall have all legislative authority granted by the act of April 12, 1900, to the Legislative Assembly of Porto Rico; that the six departments now existing, namely, the Secretary of Porto Rico, the Attorney-General, the Treasurer, the Auditor, the Commissioner of Education, and the Commissioner of the Interior, shall be continued in force; that the heads of these six departments shall be appointed by the Governor of Porto Rico with the advice and consent of the Insular Senate.

Pray grant unto this country all legislative authority and at the same time all responsibility. We cannot accept that public officers be sent to Porto Rico who, as a general rule, are unacquainted with the language, the customs, and the needs of this country, and within twenty-four hours after their arrival take their seats in the Executive Council and decide by their votes complicated and transcendental questions. We desire that the opportunity, heretofore denied to us, be given, that we may show that we are now capable of self-government. Our commonwealth has an old civilization of its own; we have shown our estimation and respect for the laws; we worked out the problem of the abolition of slavery within the most perfect normal bounds; we have met, without disorder, most terrible financial crises. We know ourselves, we fully know our needs, and we are fully convinced that we can successfully manage our own local affairs.

Secretary Taft, in an address before a Philippine audience, urged the fostering of education, the maintenance of order, and the improvement of labor conditions. He answered the native orators who were agitat-

ing independence, by reiterating that the United States would not tolerate interference in its policy of preparing the Filipinos for self-government, which would require generations. Hence he advised them to work, instead of agitate.

Chairman Shonts of the Panama Canal Commission has recently returned from a tour of inspection at the Canal. He finds that the imperative need now is complete and sufficient arrangements for housing and feeding twenty thousand men, and that this must be done before excavation can be satisfactorily carried on. He finds also that the single-track railroad now in use is adequate for all present demands, if operated in modern up-to-date methods.

The battleship *Kansas*, the largest war vessel ever built in the East, was launched on the 12th at the yard of the New York Shipbuilding Company in Camden, N. J. The daughter of Governor Hoch of Kansas acted as sponsor for the ship. As the vessel glided down the ways Miss Hoch broke against its side a bottle of spring water brought from *Kansas* instead of the customary bottle of champagne.

Iroquois, the defender of the Rochester Yacht Club, last week defeated *Temeraire*, the challenger of the Royal Canadian Yacht Club, in the final contest for the Canada's cup. It was the fifth race for the famous international trophy and the defender led from start to finish.

The Government forestry service has begun a series of experiments to determine the value of the scrub pine for paper making purposes. It is hoped that this timber can be utilized to relieve the demand for spruce, which is very heavy.

Foreign.

The union between Norway and Sweden, which the former now wishes to dissolve, was made in 1814. By the terms of the union *Bernadotte* was elected King of Norway under the title of King Charles XIII. He accepted the terms of the Norwegian constitution and agreed to govern under and according to its provisions. Owing to the divergent conceptions of the ideas of royalty and authority entertained by the two nations, disagreements in the interpretation of the royal prerogatives and of constitutional powers have been constant almost from the first. Norway is almost a pure democracy without any hereditary aristocracy, while in Sweden the aristocracy enjoys a preponderating influence in all Government affairs. Norway has always been a great seafaring nation, and her shipping and carrying trade greatly exceeds that of Sweden. The present move for dissolution originated in the demand of Norway for consuls of her own to represent and protect her in foreign countries. There is an expectation, not ungrounded, that Norway will establish a republic.

Russia's national representative assembly, which endows the Russian people with the right of being consulted through their chosen representatives in the suggestion, preparation, and repeal of legislation, now takes its place among the fundamental institutions of the Empire by virtue of a manifesto, issued on the 19th by Emperor Nicholas, summoning the representatives of the people to meet in their first convocation in January next. This action is in accord with a rescript issued March 3d last. The national assembly will be a consultative organization in connection with the Council of the Empire, and not a legislative body. The powers of the Emperor remain theoretically absolute. The suffrage is based on property qualification, the peasantry having a vote through membership in communal organizations. A considerable portion of the residents of the cities, possessing no lands, together with women, soldiers, civil functionaries, etc., are without suffrage.

Extensive plans for the improvement of the system of lighthouses along the Atlantic seaboard of Canada are announced by the

Canadian Marine Department at Ottawa. Within a few weeks an improved light will be placed on Gannet Rock, in the Bay of Fundy. A very powerful light will be established on Cape Race, Newfoundland. Lights similar to the new one on Gannet Rock, will be erected at Cape Ray, Cape Bauld, and Cape Norman, Newfoundland; Greenly Island, in the Straits of Belle Isle; Heath Point, Anticosti Island; Fame Point, Cape Magdalene; Martin River, Quebec; Gyron Island, Gulf of St. Lawrence; Mangers Beach, at Halifax; Sea Island, Nova Scotia, and several other points.

Awards aggregating \$659,287 in the claims made by French citizens against the Government of Venezuela for damages sustained during the revolution of 1901, were handed down last week by the Hon. Frank E. Plumley, the referee chosen by the French and Venezuelan Commissioners who originally passed upon the claims when they failed to agree. Eight claims were submitted to Mr. Plumley. The findings of the French and Venezuelan Commissioners were widely at variance, the French Commissioners approving awards of \$7,371,800, while the Venezuelan Commissioners allowed \$62,271. The decision of Referee Plumley is final.

The steamer *Pleiades* has brought news to Victoria that seventy sunken vessels in Port Arthur harbor have been raised by the Japanese. The battleships *Peresviet*, *Poltava*, *Retvizan*, *Pobieda*, and *Pallada*, and the cruiser *Bayan* are included in the list of those which will be saved.

The Chinese boycott of American goods has developed into a matter of serious concern, not only to Americans but other foreign citizens as well. Foreigners are now joining with the importers of American goods and the Chinese officials to have the movement suppressed.

Industrial and Commercial.

From recent estimates made of the citrus crop of California for next year the crop will be a record-breaker. That there will be upwards of thirty-five thousand carloads seems certain, and the aggregate may reach forty thousand cars. The current year ends October 31, with shipments that will total more than thirty thousand cars. Returns for this season show that the Southern California Fruit Exchange will have distributed seven million dollars to growers for fruit shipped for its members.

An order for one million pounds of boiler-plate steel has been placed with the Homestead plant of the Carnegie Steel Company, to be used in the immense new liner of the White Star Company, the *Adriatic*, now building at Belfast, Ire. This vessel will be larger than her mammoth sister ships, the *Celtic*, *Cedric*, and *Baltic*.

Egypt's official report of the Nile flood, published last week, states that the river is very late and low. A "bad Nile" has been declared. At Assouan the gauge is three metres below the thirty years' average. The cotton crop, which has been saved by the Assouan reservoir, is expected to be a record.

The Chinese Government is said to have offered, through the legation at Washington, a sum between six and seven million dollars for the concessions and property of the Hankow-Canton Railway, including twenty-eight miles of railroad already in operation and its rolling-stock.

Twenty-one wholesale trade lines of Chicago show an increase in the volume of their business of more than twelve per cent over that of last year. In money this means a gain of more than \$160,000,000.

The yield of wheat in the Northwest is greater per acre this season than for several years, and the quality is far superior to the average. A conservative estimate places the yield at 221,000,000 bushels.

CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

From our Contributors.

Gold.

M. G. KAINS.

No metal has attracted more attention than has gold. While it may not be the most valuable substance, in human reckoning, nevertheless, from the dawn of time it has held the honored rank of king of metals. Among the ancients, it is thought to have been known earlier than silver, copper, tin, iron, or lead, which were the only other metals then in use. In ancient Egypt its value was thirteen and one third times that of silver, and in Greece and Rome, prior to the Christian era, the ratio was ten to one. Valuations then as now were dependent more upon the use of the metal as a medium of exchange and for works of art, than upon less utilitarian or æsthetic attributes.

Could we look beneath the surface we might perceive upon every page of human history the imprint of golden letters. The desire for gold has directly led innumerable expeditions, and indirectly instigated countless others of less peaceful character. But even beneath this golden glamour may be traced the desire for the power which has long been attributed to this metal simply because of the fictitious valuation placed upon it. This desire has not only led men to search, but has suggested and assisted them to improve upon the methods of securing larger proportions of gold from given volumes of ore.

Apart from the mere picking up of nuggets as they happen to be seen, pure or native gold is secured from natural sources in three ways: by washing, by combining with some other metal, such as mercury or lead, and by more elaborate chemical processes. The first method is dependent upon the difference in specific gravity between gravel and gold; the gold sinks to the bottom of the pans, sluices, or other apparatus used in washing, while the gravel is borne away by the current; the other two processes depend upon affinities of certain elements or chemical compounds for gold. All three methods are practised to-day; anciently only the first was known. This method is very imperfect, since often fifty per cent of the gold is left in the gravel. The second, amalgamation, a more modern process, is extensively practised, often in conjunction with the washing process; but it is also more or less wasteful. The most recent and perfect method, that of treating the ore with a solution of cyanide of potash, or first with chlorine and then with water, caps the climax of efficiency and may be used to secure the last vestige of gold from the ore. Because of its perfection it is often employed after one or both the other processes have been utilized so far as they are practicable. In countless cases these chemical processes have been applied to the dump-heaps of abandoned gold-mines, and they have often enriched the experimenters even beyond their most golden dreams.

If gold, the most valuable metal in the so-called material realm, be taken as the symbol of truth, the Bible at once becomes the great gold-mine. Unlike material mines, however, it is inexhaustible and is free to all to secure as large a supply of wealth as they may desire. Many merely pick up occasional nuggets, which satisfy them as baubles please the young; they make little practical use of their possessions. Others, who see some value in truth, try the primitive process

of appropriating that which requires little effort to secure. It gives them some sense of power. Still others try the amalgamation process; they bring human reason and study to bear upon the text, and with more labor seek to secure a still larger amount of truth. And yet in these cases there is a vast deal of detritus which each feels sure contains still more truth, but only by the most scientific process can this be worked over satisfactorily. This process has been discovered and given to the world. "Science and Health with Key to the Scriptures" contains it.

The mine, that is, the Bible, is open to all; the process is free to all; the truth makes all free, gives all power. Christian Science recognizes and emphasizes the power of truth to destroy falsity. It echoes and re-echoes, iterates and re-iterates the declaration, "Knowledge is power." It points to the previous statement of this fact in the Bible, "Ye shall know the truth, and the truth shall make you free." It proves the understanding of these correlative statements in reforming the sinful and healing the sick, for these signs follow those who understand.

Who desires freedom: let him know the truth, for the truth shall make him free. Who desires power: let him learn meekness, for the meek shall inherit the earth. Who desires peace: let him master strife in himself, let him stay his mind on God, for He will "keep him in perfect peace, whose mind is stayed" on Him. Who desires understanding, wisdom: "let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him."

Christian Science, properly applied, enables us to appropriate all the truth of the Bible, all the power of understanding, all the might of meekness, all the trust in God. It heals, satisfies, elevates, ennobles, purifies, strengthens, and enriches. It reveals man as the image of his Maker, exercising God-given dominion over all the earth, and thus showing forth the boundless love of his infinite Father. All this gold, truth, and more, is in the Bible, deducible and rendered practical by God's own process, Christian Science. Spirit, God, speaks to each of us, even as to John in Patmos, and says, "I counsel thee to buy of me gold tried in the fire, that thou mayest be rich."

True Discipleship.

WILLARD S. MATTOX.

How may we know a Christian Scientist? Is there any hall-mark, any characteristic which may be said to classify this body of Christian people? It may be said in answer, that for one thing Christian Scientists, of all people on earth, should become the most benevolent. This will come about by reason of their teaching, but the especial doctrine which will contribute most toward distinguishing them from other Christian thinkers, is the novel proposition that evil is impersonal and unreal. This teaching is not modern, by any means. It dates back at least to the time of Jesus, and it is possible that before his matchless earthly career, others were exalted sufficiently to get a glimpse of this great metaphysical truth. In its present form the doctrine is unique only because, like much of the thought of Jesus, it was not understood at the time and has been neglected ever since.

to the incalculable loss of mankind. The doctrine runs like a luminous thread through all the theology of Science and Health; and it is the realization of its truth, involving as it does the allness of God, which heals the sick.

In practice we find that even a very small understanding of the statement that evil is impersonal, enables us to love more honestly and to forgive more genuinely. Any state of consciousness in which dwell such qualities as love and forgiveness cannot fail to leave its benign impress upon all its neighborhood. To understand the impersonal nature of evil, sweetens life as nothing else can. It is a very potent antidote for all the poison of hate, growing out of personal antipathies. It heals the corrosive thoughts of jealousy and envy, born of the misguided belief that the evil we see is some person's evil. It enables us actually to forgive what seems a personal wrong, and to say, not hypocritically, but with sincerity, "Father, forgive them; for they know not what they do."

No incident of mortal history approaches the sublimity of the scene before Pilate, when Jesus held his peace and retained his calm serenity, undismayed by taunts and gibes, by cruel falsehood and physical torture. He was personally assailed and abused; his trial was a travesty on justice; his purposes, motives, and life-work were misunderstood, and all this by what seemed to be personal enemies. Certainly the evil was operative through personal avenues. The blood of his Christian followers, removed from the scene by nearly two thousand years, sometimes runs hot with shame and anger, when the brutality of his persecutors is remembered, yet he himself opened not his mouth. How was he able to do this? What supreme consciousness supported him through that ordeal? It cloaked him with divine majesty and made him the one illustrious figure in that notable company of Jewish and Roman dignitaries. All the human pomp and glory and power were theirs, but his was the greatest victory ever won, the victory over personality. Divine Love was the victor then, and must ever be the only conqueror of the claims of error. Jesus simply refused to hate. He refused to accept mortal mind's suggestion that these personalities about him were his enemies; that they could do him harm. It must have been the understanding that evil is not personal, which enabled him to pass through all these tests, and remain undisturbed and supreme.

All his philosophy led up to this final demonstration of control. At the very beginning of his ministry he announced a doctrine which should have saved Israel, and which will yet save Israel, in due time. He said, "Ye have heard that it hath been said, Thou shalt love thy neighbor, and hate thine enemy. But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them which despitefully use you, and persecute you: . . . For if ye love them which love you, what reward have ye? do not even the publicans the same? And if ye salute your brethren only, what do ye more than others? do not even the publicans so? Be ye therefore perfect, even as your Father which is in heaven is perfect."

The Golden Rule is the epitome of this teaching. Without the understanding of the unreality and impersonality of evil, which Jesus clearly gave and which Christian Science to-day reiterates, how can we do to others as we would have them do to us? How can we love our enemy if we believe him to be somebody who is planning our discomfiture?

Christian Scientists have much to be grateful for, but in no respect are they more largely benefited than in the befitting habit of charitable thinking. The tendency to criticise, to condemn, to censure, is an outgrowth of the personal view of evil. As we begin to assimilate the truth, in Christian Science, regarding the nature of evil, our outlook on life undergoes a change, and our dispositions can but become more genial. Love for God and man gradually takes the place of that exaggerated, materially personal sense of existence which is at the very root of all our discord.

So long as we outline evil, call it a man or a woman, and then hate, fear, or pity it, we are still a long way short of

the truest scientific attitude. The test of the Christian Scientist is his conduct under fire, his mental attitude under the pressure of evil suggestion. When we are tempted to believe that there is sin, by the roundabout or secondary suggestion that A or B is not doing what he ought to do, and that his conduct, in our opinion, is far from scientific, we are as we used to be, for do not even the publicans the same? Is not this mortal mind's habit and custom? Then we may well ask ourselves, How much of a Christian Scientist am I, if I still make evil real, and call it a person, if I criticise it as person, allow it to stir me or create in me any feeling of resentment, or anger, or condemnation? What did Jesus do under provocation, when all the forces of evil united to insist that he had personal enemies who sought his life? What he did was the best thing that could be done, under the circumstances, because everything he did was scientific, and consequently just right. Then we cannot do better than to pattern our action after his. That which distinguishes the Christian Scientist is his ability to retain his harmony, in spite of everything. "If thou faint in the day of adversity, thy strength is small." When the dream of mortal existence presents a cheerful phase, then even the most melancholy Jacques can take heart and enjoy life. It is not especially creditable that we are agreeable when mortal mind seems to let us alone. We must be well and happy in spite of error, not because error allows us any degree of harmony. Are we any better than we were, if we still live on the old plane of personified evil and personified good, of mortal sinners and saints, and act accordingly?

People go to the play and lose themselves, for the time being, in the story which is being unfolded behind the footlights. They suffer with those who suffer, enjoy and fear and hate, just as the stage characters express these emotions, and heave a great sigh when it is all over, glad enough to come back to their individual selves once more and to know that what they have seen never really happened. The persons in the story, their names and natures, all the events transpiring around them, had no basis in fact, no reality; it was just a picture, a story, conceived by the playwright and objectively represented on the stage. In some such way we must come to view this drama of human life, with its shifting scenery, its varying moods, and its many actors. As Shakespeare says,—

All the world's a stage,
And all the men and women merely players.
They have their exits and their entrances,
And one man in his time plays many parts.

To forget our true selves and to live, apparently, in the story or allegory, means to share all the passions and sentiments, all the experiences which befall these stage folk called mortals. If we are wise and are well instructed in Christian Science, we will not do this. If we accept the mesmeric suggestion that all these persons are real, that what they say and think and do are actual events, that we are of them and affected by them, then results will be in accordance with our belief. There is ample warrant in the Bible and in Science and Health for assuming that our real position in Christian Science is discoverable in what we do, not in what we say. Jesus said, "If ye love me, keep my commandments," and one of his commandments was that we love one another, as he loved us. The proof of our progress, in fact the only evidence of our improvement which is worth considering, is to be found in our mental attitude toward our brother, and this mental attitude will be very largely decided by our understanding of the impersonal nature of evil.

The genuine Christian Scientist is a marvel of courtesy and charity. Like Spenser's "gentle Knight," it may be said of him, "Right, faithfull, true was he in deede and word." He is chivalrous, and always ready to succor them that have need of help. He discerns between the self-righteous appeal and the humble request of an honest heart, but even for self-righteousness he has no personal word of condemnation. He is always mentally hospitable to ideas

of truth, and because of this it often happens that he entertains angels unawares. Suspicion, fearfulness, exaggerated caution are no part of his make-up. He does not stoop to intimidation or innuendo. He is frank, honorable, simple, natural, fearless. He makes no war on any man, is charitable, gracious, merciful. The hue of his own kindly thought is imparted to those about him. He always brings with him a genial atmosphere of goodness, of good morals and good health. He has learned the art of minding his own business, and his conversation is well ordered, because he remembers that "Every idle word that men shall speak, they shall give account thereof in the day of judgment." This outlines the genuine Christian Scientist, whose model is the perfect man, Christ Jesus.

The Beginner and his Task.

REV. G. A. KRATZER.

IN the State Normal School of Cortland, New York, in the '80's, the first experience that the pupils had with any branch of metaphysics was when they took up the study of psychology in their senior year, under the principal of the school. On first entering the class, we were directed to open the text-book at a certain page, where we found a paragraph quoted from Sir William Hamilton's "Metaphysics." The teacher spent the entire hour in trying to make plain to us the meaning of the metaphysical terms which appeared in the first sentence. He said that we could never hope to study psychology successfully, until we had a clear and exact understanding of the meaning of the technical words which are used; and as evidence that we understood the meaning of what he had been saying to us, he required us to write out at home a statement which would convey the exact meaning of the sentence under consideration without using any of the words which were in the original sentence except the articles, conjunctions, etc. The next two recitations were spent in carefully criticising the paraphrases which members of the class brought in. Then they were required to do the work over again, and three weeks were thus spent in working out satisfactory paraphrases of the paragraph, which did not consume over half a page, notwithstanding that in twenty weeks we had to cover the material embodied in two large text-books. That we should have a correct understanding of metaphysical terms, seemed so important to our teacher that he devoted three twentieths of our time to this matter alone.

Science and Health professes to be, and is, a work on metaphysics. To deal successfully with the important facts about God and man, it could not be anything else. Consequently, it was necessary that Mrs. Eddy should use metaphysical words, and ordinary words employed in a metaphysical sense. In view of the above experience, should any reader of Science and Health be discouraged by the fact that it may be necessary for him to read the book for a considerable time, before he can discern the meaning of the metaphysical terms employed, from the connection in which they are used? Or should any one say that portions of the book are meaningless, or that the style is unnecessarily obscure under these circumstances?

If the writer may be allowed to be a judge, the metaphysical passages in Science and Health are not nearly so difficult reading, to a beginner, from the standpoint of the technical terms employed, as most of the text in ordinary works on psychology; but the average person, even if he be familiar with other works on metaphysics, must expect to spend a little time and effort in order to become familiar with the exact meaning and usage of certain words in Science and Health, before many passages will become clear to him. If he does this, he will find that the paragraphs which were most obscure, when he began to read, embody those statements which, to the fuller understanding, are most luminous with truth, most practical for application in daily life, and most direct and useful in healing the sick. With all this, however, it is not desired to convey the im-

pression that to acquire an understanding of Science and Health is a matter of undue difficulty. Those who do not find it as easy reading as the newspaper, or the current novel, should persist in reading and studying it, being assured, from the experience of others, that if they do so they will thereby discover the pearl of great price.

A Plea for our Literature.

ALBERT E. MILLER.

It is a self-evident proposition that if our Christian Science publications were more widely distributed, our churches would be attended by more people, our Board of Lectureship would be greeted by larger and more frequent audiences, and, last but not least, our Publication Committees would be called upon less frequently to correct published misconceptions of Christian Science; thereby giving the committees opportunity to present original articles to the reading public through the columns of the daily press,—quite a large demand for which has already appeared.

Strange as it may seem, a great many seeds of prejudice have been sown in the public mind against Christian Science by the very large number of books in our public libraries which contain more or less vicious attacks on our faith and its noble Founder, and which at the same time embody the name Christian Science in their titles in a way which invites perusal upon the part of good people who visit the libraries with the intention of gaining some general information on the subject. This condition of affairs was noticed in Philadelphia some four years ago, and a committee was formed to care for the situation. Gradually the works of our Leader were placed in the more important libraries, along with the Christian Science periodicals,—displayed in regulation library covers,—and later the smaller libraries were served in the same way. Not content with simply placing the literature, the committee organized a plan for the systematic visitation of the libraries, to see that the books and periodicals were properly displayed and the supply maintained in sufficient numbers to meet the demand.

As time went by, certain libraries were found to have an insufficient number of our text-books on hand, and the number was then increased, until to-day all the larger libraries have several copies of Science and Health in constant circulation, and in one of them seven copies of the text-book of Christian Science, as well as a number of copies of the smaller works of our Leader, are now in constant use.

All this has shown that there exists a large demand for authentic information on Christian Science, and that for a comparatively small outlay the public can be given what is true, and thereby protected from assimilating the false.

During the past year the committee has been enlarged, and the annual appropriation from First Church of Christ, Scientist, of Philadelphia, which supports the committee, has been increased so as to permit of a regular visitation of charitable institutions, of which there are very many in this great city, and wherever kindly received our text-book and our other publications may be placed therein. The prisons, too, have been looked after and kept supplied, as well as some of the police and fire stations.

In addition to the new books which have been distributed, as well as the subscriptions to our periodicals which are regularly carried by the committee, the members of the congregation have been invited to turn over to the committee for free distribution among the prisons and public institutions, the *Sentinels* and *Journals* which have accumulated in their homes, and in this way hundreds of copies have been distributed which might otherwise have gone to waste.

Altogether the results of this work have been highly satisfactory, as not only furnishing a broader field of usefulness for our literature, but at the same time it is utilizing the helpful efforts of a number of members of the Church toward the upbuilding of His kingdom, of which "there shall be no end."

Selected Articles.

A Physician's Thought.

If man is a spiritual being, as is generally admitted, it behooves him, for self's sake, to give attention to spiritual concerns. Besides, no general social betterment is possible until our desires are fixed upon something far above and beyond the present ideals.

We never will attain to the standard of higher ideals so long as we admire and laud as our representative great men, those monsters of acquisitiveness who possess millions that they never earned, and which could have become theirs only through the enforcement of heartless methods upon those helpless to resist them. To admire such men means to admire their cynical business maxims, and esteem as commendable the immoral deeds which make such acquisitions possible.

These low aims and ideals sow the seeds of restlessness and discord everywhere. In public places, try hard as we will to hold fast to the better way and preserve our self-respect, we are ordered about in the general *melée*, hustled and herded and compelled to endure numerous indignities from those who have no respect for persons.

But amid these jarring environments we now and then see manifestations, startling indeed by contrast, of a sweet and harmonious life. It attracts us as revealing a mind centered and safe in its enlightened serenity. This evidence of divine power, for it is nothing less, makes a deeper impression for good than can any mere exhortation from the pulpit. This subtle aroma of sincere goodness is an intrinsic and recognizable characteristic of the sect called Christian Scientists, as any one acquainted with them can testify, and it is the direct outcome of right thinking.

I am not now considering the feature of physical healing, but note for the moment only this: That the Christianity which Mrs. Eddy inculcates in her system is primitive and pure; that it frees us from the notion that practical Christianity is impossible, for it is proven possible and applicable to every concrete instance in our discordant commercialized environment; and that this divinely beautiful influence of the Spirit carries its blessings of peace and serenity to every responsive soul within its radius.

They who evince such beauty of character and strew their pathway with such sweetness and light, afford examples and influence that come well within the meaning of altruistic. We love them for their goodness, and for thus showing the victims of an un-Christian civilization how to practise Christlike qualities, how to lead a religious life of such beauty as proves its value, and renders Christian Science, even aside from its physical healing, a demonstration of God's pure truth, the means by which to attain to a standard of higher ideals and a world-wide social betterment.

HARRIET A. LORING, M.D.
Brooklyn (N. Y.) *Eagle*.

Is Prayer a Reserve Force?

Recently a noted divine declared, "Parents have no right to pray for their children's lives until they have first done all they can to save them through the science of medicine and surgery."

This is not in keeping with the Scriptural teaching that "God is our refuge and strength, a very present help in trouble." We can scarcely believe that it was the gentleman's intention to assert that man should first exhaust his own strength before leaning upon the omnipotent arm. It is certain that there is no Scriptural authority for regarding God simply as a reserve power. By implicit reliance upon Him we rightly honor Him and reap a reward in harmony.

Jesus declared, "It is the spirit that quickeneth; the flesh profiteth nothing," implying that we should lean as heavily

upon Spirit as possible in every age of the world, not only during the climax of our troubles but in their incipency. We should even trust God before we are sick, as a preventive of trouble. It is a very grave error to suppose that one who places his dependence upon Spirit is doing less to help himself than the one who resorts to material remedies, and the present results of trusting God demonstrate the truth of this declaration. Is it less rational or less Christian to depend upon the certainty of divine providence than to pin one's faith to the uncertainty of *materia medica*?

We are taught in the Scriptures to pray without ceasing. If God is a real help, and if there is real efficacy in prayer, such help cannot be exercised too soon or too earnestly. If prayer is to be delayed until we have exhausted all other promises of relief, when shall we know that we have reached the point when prayer may be legitimately employed? Does our reverend brother believe that there is very little efficacy in prayer, and that, therefore, we should not risk depending upon it so long as there is something more substantial to use, or does he believe that modesty demands that we use divine measures sparingly? We choose rather to think that his peculiar view is based upon his lack of understanding of what can really be effected through true prayer. Christian Science, showing how to utilize the divine power in an effective manner, provides a way out of the dilemma. Thousands of minor ailments have been destroyed by this Science in less time than would be required to send for a physician, while thousands of chronic cases have been healed after having failed to recover through the ordinary material method.

The true method could not be more graphically stated than in the following words: "In all thy ways acknowledge him, and he shall direct thy paths."

ALFRED FARLOW.
Boston Times.

There never was a time in the history of the world when the Bible was used as a text-book to the extent it is to-day. If there is not within the lids of the Bible a correct statement of the creation of the universe and the laws of its operation, where shall we look for such a statement? Certainly physical science, so-called, has never revealed it. The greatest intellects of all ages have labored untiringly in the fields of science, theology, and medicine, advancing new theories and refuting old ones, establishing new systems and abandoning those of their predecessors, *ad infinitum*. And yet to-day, mortal man is, to a large extent, the victim and not the master of the material forces he has discovered, and is still controlled by sin and disease. All the while, however, in the compass of a single chapter of the Bible, and that the very first, there is to be found a clear, concise, and logical account of the creation and government of the universe and all it contains, and in the gospel story of the life of Jesus can be found the only instances of perfect healing in the record of the centuries, together with the system of theology which cleansed the Magdalen.

Dr. Schurman of Cornell University makes the statement, —evidently referring to the "miracles attributed to Jesus,"— that "we are recoiling from those dogmatisms of the Bible." If the professor refers to the healing works of Jesus, the fact that such healing works are now of such common and daily occurrence proves that they are in no sense miraculous but absolutely natural, and according to the teaching of Christian Science, an inevitable consequence, not of mere faith but of a right understanding of the laws which govern the universe and man.

We agree with President Schurman that the gospel of Jesus Christ is needed in "our seats of learning," but only as it is spiritually understood and demonstrated in regenerated lives and healthy bodies can the Bible be made practical as a text-book and "save our race from materialism, skepticism, and despair."

R. STANHOPE EASTERDAY.
Indianapolis (Ind.) Sentinel.

The Lectures.

Orange, N. J.

Bicknell Young of Chicago lectured on Christian Science before a large audience in Music Hall Monday night [June 5]. The speaker was introduced by Charles T. Root of East Orange, who said in part,—

Christian Science is offered as a platform built of and upon the immovable rock of truth, which has been from the beginning. The full understanding of it is boldly asserted to be the panacea for all ills, to be a compass that never varies, a rudder that never breaks, a light that never goes out, a comforter that is never absent, a restorer and preserver of health and happiness. Christian Science is not put forward as one theory among many, much less as a human invention; but as a demonstrable science, whose soundness, like that of any natural science, is proven by the results which follow strict compliance with its rules.

A practical people, men and women who are weary of speculation on vital questions, or of thought systems which seem to them sterile and inert, are eager for something of this kind, for truth which they can individually test and prove to be such, and which they can constantly use. To them, the subject of Christian Science, its nature and its far-reaching claims, would naturally be of immediate interest, as well as of the deepest concern. That such is the case is attested by the rapid spread of the movement and by the increasing respect of those who know it as yet only as it shines through the lives of its individual adherents.

The Orange Chronicle.

Lancaster, N. H.

Edward A. Kimball of Chicago lectured on Christian Science at the Opera House, June 8. He was introduced by Mrs. Charles W. Sleeper, who said,—

When asked to introduce the lecturer, I decided that perhaps I could not do better than to allude briefly to some of the things that Christian Science has done in our town. Facts are stubborn things, and to many of you it is well known that some among us were once confined to our homes for days, and in some instances for weeks and even months at a time, who may now be met upon our streets almost any day. If to-night there are present any of the physicians who did so much for us in those days, I wish to say to you that again and again I have heard expressed amongst us, loving appreciation of, and gratitude for, the kindly, cheering words, the willing help you gave us in the past. It has, however, been said that "there was nothing the matter with us in those days." Well, we thought there was, and despite your earnest desires and endeavors, you neither healed us of our diseases nor our delusions, and Christian Science did.

Some of our number were once members of other religious denominations. Let me ask you, in all love and honesty, if you had given us what has since been given to us, would we not be with you still? If you had proven to us that your religion had a scientific, demonstrable Principle, if you had satisfactorily answered our questions as to the past, present, future, the whither, wherefore, how; if you had proven to us that prayer, yours and ours, could heal us of our diseases as well as our sins, what need would we have had for anything more? This you did not do, and Christian Science did. Should it seem strange that the thing which not only offers, but gives, health, strength, peace, and a greater desire for purity and holiness, should be the thing we adhere to?

Do you find that we are not as kind, true friends and neighbors? not as willing to relieve suffering in every form? Do you find that we are not trying to be all that makes for good citizenship, not striving to follow the Master, as before? As Christian Scientists we are taught to be loving and charitable to all, allowing to others the same rights and privileges that we claim for ourselves.

It has sometimes been said to us that our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is difficult to understand. Should this seem to be the case, it is because materialism blinds us to the truth. The Scriptures teach us that God is Spirit: and that they who "worship him must worship him in spirit and in truth." If this be true, then He must be understood spiritually, for we cannot worship intelligently or reverently what we do not understand. If, then, with the open book before us, we find it difficult to understand because of our lack of spirituality, where must its author have stood in purity and holiness to have received the message and given it to the world?

We believe Christian Science to be the truth, a statement that perhaps some of you may not agree with, but let me ask you, and ask yourselves, What if it really should be the truth, what then? If it is the truth, then every honest physician will be glad to learn that there really is something which will heal every pain and disease, and that it lies in his power to give this aid to suffering humanity. Every honest clergyman will rejoice that the commands, "Preach the gospel," "Heal the sick, cleanse the lepers, raise the dead," may be literally obeyed here and now. Every honest man, woman, and child wants Christian Science if it is the truth.

Franklin, Mass.

Judge Septimus J. Hanna addressed an audience which completely filled Odd Fellows Hall on Tuesday evening [June 20] on the subject of Christian Science. He was introduced by Judge Henry E. Ruggles of this place, who spoke in part as follows:—

In the short space of a generation this religious belief has grown from a few adherents until now its followers number hundreds of thousands, and has extended not only throughout the length and breadth of this country but even into foreign lands and to the isles of the sea.

On the soil of this our beloved Commonwealth, in the hamlet of Concord, more than a hundred years ago, was started a conflict for the political rights and liberties of our people that resulted in enlarged political liberty and religious freedom. That beneficent result was obtained through rebellion and revolution, not only for the colonists of America but those principles have permeated all governments, races, and peoples throughout the earth, resulting in greater liberty of action and conscience.

So it may be that from the city of Concord in our neighboring State of New Hampshire, there is to-day going forth a religious influence, not by drastic but by gentle and benign means, by appeal to reason and conscience, an influence that may result in softening the hard lines that now divide the religious sects and denominations, permeating them with the true Christ-spirit of brotherly love and cementing them together in the work of making man better and nobler, morally and physically.—*The Franklin Sentinel.*

CHRISTIAN SCIENCE SENTINEL

Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

A Grateful Recognition.

[Excerpt from a letter.]

Frank N. Nay
Leon M. Abbott

Nay & Abbott
Counsellors at Law
1043, 1044, and 1045 Tremont Building.

Boston, August 16, 1905.

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

Dear Madam:—We are acting as counsel for Mrs. Whitcomb, the administratrix of the late E. Noyes Whitcomb, in settling her husband's estate, and we desire personally to thank you for relieving the estate from very serious embarrassment by taking title to the Brookline land which Mr. Whitcomb just prior to his death had contracted to purchase.

Mr. Abbott, who is now in the mountains on a vacation, did everything he could to try to get the estate relieved from Mr. Whitcomb's contract, but was utterly unable to accomplish anything in that respect, even though he offered to pay a considerable forfeit.

Therefore, when you came forward and took this land and paid the purchase price, you relieved Mrs. Whitcomb and her daughters of a most severe burden, and we can assure you that we appreciate it. After carefully looking into the circumstances, we have advised them that there was not only no legal obligation on you in this matter, but also no moral obligation whatsoever.

Yours very truly,
NAY & ABBOTT.

MRS. EDDY'S REPLY.

Pleasant View, Concord, N. H., August 19, 1905.
Messrs. Nay and Abbott.

My Dear Sirs:—Your favor of the 16th inst. was duly received; please accept my deep appreciation and gratitude for your kindness and professional skill.

I well knew that the dear Whitcomb family held no legal claim against me for debt; and yet the moral demand remains with every Christian Scientist to comfort such as mourn. Let us trust that no sinister consciousness will trample on this priceless pearl. The bereaved family are members of my Church, and the sudden loss of a husband and father, one of the very best of men, strongly appealed to me, otherwise, I could have ill afforded so great an undertaking and expense. It is far better to do unto others as we would have them do to us than fail to obey a single precept of our Lord.

Most sincerely yours,
MARY B. G. EDDY.

A False Report Corrected.

Not a little of the prejudice existing against Christian Science is based upon false reports which have been published as news items in the daily papers, and the following letter from the Christian Science Publication Committee, which appeared in a recent issue of the *Joplin (Mo.) News*

Herald, will serve to call attention to the unreliability of many reports that have crept into the newspapers because of the great haste with which news must be gathered, as well as to an important part of the work of this committee. The letter is as follows:—

"St. Louis, August 10.—Editor *News Herald*. *Dear Sir:*—The *News Herald*, in its issue of August 4, in giving an account of the death of the infant child of Mr. and Mrs. W. F. Linn, of 2219 Virginia Avenue, your city, states that the child was treated by a Christian Science healer. Being informed by friends regarding the publication, I obtained a statement from Mrs. Linn concerning the matter. To the party who interviewed her she made the statement that the child did not have Christian Science treatment. In her statement she says,—

"The lady who treated the child was not a Christian Scientist and did not claim to be one. The lady rubbed with her hands and claimed to be a magnetic healer and osteopathist."

"I do not know the lady who gave the treatment, but am certain, from the report, that she was not a Christian Scientist, as she is unknown to other Christian Scientists in that section and her treatment was certainly not Christian Science treatment. I feel sure that you do not wish to blame any one unjustly, and ask if you will kindly publish this statement, either in this form or in such a manner as you see fit. I think one of your reporters could get the same information from Mrs. Linn that I have, if you care to go farther into the matter.

"Thanking you in advance for this kindness, I am, respectfully,
JAMES A. LOGWOOD."

Some people who are not interested in Christian Science have criticised this denomination for maintaining a Publication Committee, but when it is borne in mind that public opinion is moulded by the news columns of the press no less than by the editorial pages, it is important that no erroneous item such as the one corrected by Mr. Logwood be permitted to go unchallenged.

At one time we had knowledge of a State Board of Health in a western State which subscribed to a clipping bureau for the purpose of obtaining reports of deaths occurring under Christian Science treatment, and it was the intention of the Board to use these newspaper reports as evidence of the alleged need of legislation against the practice of Christian Science. No doubt many news items with no better foundation than that of the report regarding the Linn child have done duty before legislative committees, and with this in view may we not ask our friends of the press to ascertain the truth in such cases before publishing anything in their columns. ARCHIBALD McLELLAN.

The Question of Hazard.

OUR first steps in human experience and endeavor are wont to be faulty; but, though we come far short of the ideal, it is to the present advantage of the individual, as well as to the permanent advantage of the race, that we prove true to our ideal from the moment it is clearly recognized, and strive faithfully and persistently for its attainment.

In a time of temporary defeat a large and comforting philosophy is likely to be trodden under foot by the thronging importunities of habit and of human affection; and yet the hope of humanity, and therefore of the individual, hangs upon the faithfulness and self-forgetfulness of our devotion. The question of the possible experience of human suffering or loss, because of adherence to a high ideal, is often presented to those who must decide not only for themselves but for their children, and that, too, when a given determination is likely to be strongly opposed by other members of their family, and it is therefore well to meet it frankly and understand our ground. The life and teaching of Jesus leave

no room for doubt that temporary suffering and sacrifice may be incurred by those who resist and thus antagonize the asserted powers of evil. To oppose the currents of selfish human impulse and material belief is to experience their buffetings, even, perchance, to the cross, and this law obtains to-day no less certainly than it did when the martyrs marked with bleeding feet the course of their ascent. Error's resistance has varied forms of expression, some of which are no longer seen; but so long as criticism and condemnation find a place in mortal mentality, so long will all who are on the fighting line for truth need a clear and continuous consciousness of Love's protecting presence.

It would seem a splendid thing if all could rise to the consummation of this consciousness as a man vaults into the saddle, but neither human history nor the Master's teaching warrants the expectation of such an event. The whole tenor of the Word emphasizes the thought of growth as the normal process of racial advance. Heaven has not been and may not be reached at a bound, nor is the highest order of efficiency as a minister of Christ attained without labor and experience; but while all true Christian Scientists are pressing on with constant prayer for that more adequate spiritual efficiency which is so imperatively demanded to-day,—that dominion which is to be gained only as the clouds of material sense are dissipated by the Christ-light,—they are saved from the sense of enslavement to an evolutionary process by the remembrance that Jesus sent out his faithful followers at an early period in their discipleship, and definitely commissioned them to do those works which we may be tempted to think require not only a high order of spiritual apprehension but mature experience as well. Many times did Jesus rebuke his disciples for their slowness of heart, and he must have recognized their inability to immediately solve all the problems they were likely to meet,—an inability which was conspicuously manifest in the instance of the afflicted boy whom Jesus healed on his return from the Mount of Transfiguration,—and yet, despite their limitations, he unhesitatingly commended them to their undertaking, and they wrought a work in their day which has revolutionized the world.

The history of Christian Science abounds with kindred instances of wonderful healing done immediately after the first awakening to its truth. In very many cases the understanding of the Master's teachings, gained through our Leader's writings, has been so clear and exalted that students have been enabled to do works upon whose greatness they have marveled in later years. It is thus seen that while the movement of the larger body may be said to be evolutionary, in the case of the responsive individual an educational time limit does not necessarily precede the attainment of that perception of essential truth, and that childlike trust in it, which prepares one to rebuke sin and annul the asserted laws of disease,—and this for the reason that truth ever reaches human consciousness through revelation, not growth; through inspiration, not development. The truth is now and forever established in Divine consciousness, and as the dewdrop effectively transmits the sun's pure light, so may the childlike thought reflect the might of Mind.

The cry of "hazard" always expresses a more or less conscious or unconscious belief in the efficacy of that drug treatment which those who look to Christian Science are called to give up, and the intimation is often conveyed that until spiritual consciousness is more advanced, to rely upon Christian Science treatment alone is to assume the risk of personal loss for the sake of a consistent adherence to a transcendent ideal. It is apparent that the domination of this thought would practically interdict our progress in truth, by denying the legitimacy of spiritual endeavor prior to the attainment of spiritual completeness! The fallacy of this assumption is further established by experience. It is quite impossible that the Christian Science movement could ever have obtained or retained its present hold upon intelligent men and women, had they not come to know beyond all

question that though we are but at the dawn of the demonstration of spiritual healing, it now presents not only the right means, but the most effective means of escape from physical ills. To know and accept this truth, so abundantly established in the history of Christian Science, is to be impelled to ally one's self with the heroes of the past who, by their unswerving loyalty to their highest spiritual sense, have proved for themselves and for the race that in standing for the truth our Lord demonstrated, they pursued the safest and best course, and thus escaped the possibility of regret.

JOHN B. WILLIS.

Letters to our Leader.

Beloit, Wis., July 14, 1905.

Rev. Mary Baker Eddy,

Pleasant View, Concord, N. H.

Beloved Leader:—It is with hearts full of gratitude to you, and of love for The Mother Church, that we desire to express ourselves as a church. At a business meeting held some two years ago, our church voted to send the collection, which was not to be less than fifty dollars, on the first Sunday of each quarter, to The Mother Church Building Fund, until The Mother Church is completed. We took our quarterly collection for this purpose July 2, and at our semi-annual meeting we raised the amount to one hundred dollars. Following this, the motion was made that we lend our local church building fund to the Lord by turning the full amount, one hundred and twelve dollars and seven cents, over to The Mother Church Building Fund. As it was lying idle in the bank, this motion met a hearty response.

The following Sunday, our Sunday School voted to send all the money in the Sunday School treasury, four dollars and seventy-eight cents, also the Sunday School Church Building Fund of eighteen dollars and twenty-eight cents, to The Mother Church Building Fund. This may bring to mind the widow's mite, but if it be given in love it does its required work.

Affectionately yours,

FIRST CHURCH OF CHRIST, SCIENTIST.

EDWIN A. GREENWOOD, *Chairman of Board of Trustees.*

MRS. MARGARET M. MEYER, *Chairman of Board of Directors.*

JOHN E. SARGENT, *Clerk.*

MRS. EDDY'S REPLY.

First Church of Christ, Scientist, Beloit, Wis.

Beloved Brethren:—"Well done, . . . good and faithful . . . enter thou into the joy of thy lord." "In thy name shall they rejoice all the day: and in thy righteousness shall they be exalted."

Lovingly yours in Christ,

MARY BAKER EDDY.

Pleasant View, Concord, N. H., August 7, 1905.

Los Angeles, Cal., July 8, 1905.

Beloved Leader and Teacher:—Money cannot represent, nor can mere words express, our love and reverence for you, which is inspired by your devotion to the cause of Truth and Love. On this Communion Sunday, Second Church of Los Angeles has taken up a special collection for The Mother Church Building Fund, amounting to nine hundred and forty-one dollars and thirty-eight cents, which makes the total subscription to the fund, so far, by our church ninety-one hundred dollars. In addition to this, members of the church have subscribed, and are paying regularly, about three hundred dollars a month to the fund, to be continued until the building is completed. These contributions are sent as a small token of the sincere love and affection of the Christian Scientists of this far-away Western city, for their Leader and Teacher, and for the Church she has founded.

We are endeavoring to supply the need of a church edifice in our own field. We have purchased lots in one of the most attractive residential districts of the city, at a cost of twenty thousand dollars, and the plans for the church are now being prepared. With a growing church, having a regular attendance of over one thousand, the need of a building of our own has become imperative, but we know that this necessity cannot prevent us from enjoying the privilege of joining in the work of erecting The Mother Church. We are trying to show our love and appreciation by obedience and faithfulness to the requirements of our blessed religion. May our church ever be found striving for all that is high and noble, and for that Mind which was in Christ, that we may be worthy to call you Leader and Friend.

PETER N. TRAHN, ELMA P. JONES,
BLANCHE K. CORBY, JOHN D. WORKS,
KATE S. GREPPIN, Committee.

MRS. EDDY'S REPLY.

God loves you, I love you. The world is made better by such as you. MARY BAKER EDDY.

Portsmouth, O., July 29, 1905.

Mrs. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader and Guide:—Ever since I was found by Christian Science and privileged to learn at the feet of Truth, the desire has always been present with me to give you something, but I never seemed to have anything quite good enough to offer. I felt from the first that whatever entered Pleasant View must be perfect of its kind. As thought expanded, and as I saw that everything visible is but "type and shadow," the desire began to formulate itself, and I longed to send a pure gold ring containing three beautiful clear diamonds. The desire, as to a symbol, seems as remote as ever, but I believe I can now send its substance.

During the last few weeks I have been able to prove that Christian Science heals "quickly and permanently," as you wrote the London church, and as our Church Manual commands. The first of these cases is that of a little boy who, at four o'clock in the afternoon, fell from the top of a high tree, about thirty feet, and was carried home unconscious. About a half hour after the message for help came, another was received,—"Conscious and without pain, but one arm seems helpless; cries if we move it; we think it is dislocated at the elbow." The next morning he wiped the breakfast dishes, using both arms, and went to school as usual,—well.

The second: At 8 A.M. a lady fell from top to bottom of a long stairway, disfiguring her face and injuring her hip. Shortly after, from a sense of nervous shock, convulsions set in, and when her daughter telephoned me, the fear of death had been expressed by the family. Life was realized, and in one hour she sat up in bed. She arose and dressed in the afternoon, and attended to all of her own housework the next morning.

The third is the case of a sweet little rosebud babe, whose young parents are studying this Science. The mother called about eight in the morning, "Come quick, my baby's arm is fractured, she is screaming with pain." By the time I reached the house, a few blocks away, quiet reigned. The young father had been called home from business. At ten o'clock he returned to his work, and the little one played about the floor as usual, laughing all the while, but did not use that arm until the next morning, when she threw both little arms around her mother's neck and kissed her—free! To say that my heart goes out in gratitude for the understanding which makes these things possible, is but a feeble expression of thought. I see more and more clearly that only as we follow your steps are we freed from the trammels of material belief.

In thinking over the lines of thought which are conducive to these proofs of Truth's power, it occurred to me that the activity of Truth accomplished the first: the realization

of Life, divine energy, the second; and Love, the ever-present spiritual activity, the third.—Truth, Life, and Love. Then it dawned upon me. Surely these demonstrations shine with the clear white light of Truth. They are diamonds set in the circle of eternity. Then I thought of the ring I wanted to give you, and here it is, but after all, it is only giving you back your own,—the reflection of your own bright shining.

Humbly and gratefully yours.

FLORA BELLE JOHNSON.

MRS. EDDY'S REPLY.

Thanks. I value the spirit of your gift, above all things. M. B. G. EDDY.

Oshkosh, Wis., August 8, 1905.

To the Rev. Mary Baker G. Eddy, Concord, N. H.

Beloved Leader:—Among the unnumbered blessings which your chaste life has brought into mine, I count as especially priceless, certain pages from your message to The Mother Church, for June, 1901, under "No Reality in Evil or Sin" (pp. 19-24). These words have been my stay in dark hours, and when the claims of error seemed strongest, I have been wont to go to my room, and when alone with God, to read them aloud. They were always illumined to my thought, and each reading gave a clearer, stronger sense of God's allness and the nothingness of evil.

For this, dear Leader, and for manifold blessings received through Christian Science, I thank our Father-Mother God, and you, His faithful messenger to this age.

Lovingly your student's,

MORRIS PHILIP JONES.

May I send this little handkerchief?

MRS. EDDY'S REPLY.

Thanks.—M. B. G. EDDY.

Brighton, Mass., June 10, 1905.

Rev. Mary Baker G. Eddy,

Beloved Leader:—Less than a year ago I was healed in Christian Science of melancholy. Out of the darkness there suddenly shone for me a great light,—the truth of spiritual being as explained in Science and Health. Since my healing I have again been greatly blessed of God in many ways. The freedom which Christian Science has brought to me is beyond words to express. Your writings—especially Science and Health—are to me pearls of great price. Through the reading of them I am beginning to comprehend the inestimable worth of your life's labor to all mankind.

Please accept this expression of gratitude from one who has been rescued from the depths of despair through the truth which you have voiced to the world.

Sincerely yours,

FRED C. WORMELLE.

Cedar Rapids, Ia., April 28, 1905.

Beloved Leader:—You may be pleased to know that a little band of workers away out here love you and our dear Cause and are trying to prove it by their works. We were able to send one hundred dollars to The Mother Church Building Fund at Christmas time, and fifty dollars a few days ago. This expresses but a portion of the love we feel for Christian Science,—God's precious gift to humanity through you, our beloved Leader.

Believe us, most lovingly yours,

Christian Science Students' Association.

CLARA D. LYMAN, Teacher.

Even in our commonest every-day work, we need the consciousness of His constant presence.

GEORGE MACDONALD.

Testimonies of Healing.

My healing was wonderful to us all. In September, 1895, I was taken very ill. A physician who was called feared peritonitis, and next day decided that this was the trouble. He visited me every day, and I had the best of care, but January found me in bed, and the doctor told me I had been at death's door three times within a month. I then sat up twice, only to go back to bed again, worse than before. In March I again sat up, or lay on the couch, and walked a little by leaning on some one, but could not be dressed as usual. I stooped over like an old person, and one day the doctor told me he feared tuberculosis of the bowels. Later, he said it had developed, and that the next step must be to have a specialist. He left a prescription, and went away. After he had gone, I thought it all over and decided I would take no more medicine, for if I must die I would spend no more money. My thoughts were more like hell than heaven that day, and when my husband came home at night I told him what the doctor had said. He was almost distracted, and asked for the prescription, but I dropped it into the fire, saying I would take no more drugs.

This was Monday, and our home was a very sad one. On Friday afternoon a caller was announced, who proved to be an old friend, a Christian Scientist. Six years before, when I was ill, she had spoken to me of Christian Science, but I had rejected it. She had now called on my sister, who told her of my condition. Knowing that "man's extremity is God's opportunity," she very kindly called on me now, but I was not at first glad to see her; being so sure I must die very soon, I wished to see no one. She, however, lovingly told me I could be well, that God did not make sickness, and said so many comforting things that hope revived. She inquired if I would like to read *Science and Health*, and when I answered that I would, she said she would bring it and show me how to read it aright. After she had gone, I thought over all the Scripture passages she had quoted, called for my Bible and read them. When my husband came home I asked him what he thought of trying Christian Science treatment. He replied, "Try anything, only do not leave me." On Monday my friend came, bringing the precious book. She said at once, "You are better." I asked her for treatment, which she gave. Then followed a beautiful talk which I shall never forget. Later, I walked erectly down the hall. Then I realized what I had done,—I had stood and walked alone, the first time for months. When the practitioner saw my amazement, she smiled. She came to me each day for a week and at the end of that time I took a seven-minute walk alone up hill. The most alarming symptoms all disappeared after the second treatment, and in twelve treatments the trouble was entirely healed. Some of my friends said the healing would not last, but it is now nine years, and I have been, and am still free, perfectly free.

A few months after this beautiful healing I had occasion to call on a doctor, on an errand for a friend. I asked him what he would call a sore that had come on my flesh. After looking at it he said, "This is cancer, and an ugly-looking affair, too. It should be removed within two weeks." That, I said, I should not have done, because from his standpoint, it would return in worse form. He admitted this, and said if it was on his flesh, he should not have it done. I then thought it time to go to my practitioner, which I did that day. Under Christian Science treatment the cancer was perfectly healed in three weeks,—not a trace was left. I now see that my own thought was largely responsible for that cancer. It seemed very real to me, because two relatives had this trouble. The wrong mind-picture had expressed itself on my flesh. I did not then know that the cause was wholly mental, but thanks be to God, that demon was cast out. I have now learned that the thought of divine Love, as ever-present and all-powerful, is vastly better than any material remedy,

for it produces harmony and strength, in both mind and body. Words cannot express my love and gratitude to God, and to our dear Leader, Mrs. Eddy, through whom God has given to a waiting world this revelation of Love's power, by which I was brought back from the very verge of the grave.—JEANETTE P. BROOKS, Somerville, Mass.

It is now six years since I first became interested in Christian Science, and the blessings my family and I have received in those years have been innumerable. Our first experience was such a wonderful one that from that time I could never doubt the healing power of Christian Science. Our little girl, then about twelve years old, had had a throat trouble all her life and had been treated by physicians and specialists without permanent good results. After having had her tonsils cut out, a growth appeared in her throat and nasal cavities which almost closed up those passages, making it hard for her to breathe, swallow, or hear. She was quite deaf at times, and the specialist last consulted said there was no earthly way of curing her but by the knife. As he would have to give her chloroform, I was very much afraid of the operation, but both he and the family physician said there was no alternative, so I consented. However, the night before the operation was to have been performed, the child took sick and could not undergo the ordeal for two weeks.

Before the expiration of that time I had decided to try Christian Science for an ailment of my own that the doctors had never relieved, and in talking with the practitioner I asked her if Christian Science could remove a growth from the nose, and she replied that Truth could do anything. I took the child to her at once, and in a short while an improvement was manifest. After several weeks I sent her to the physician to be vaccinated, and she told him that her mamma said to examine her throat and see if he wanted to operate on it now. He told her to tell her mamma that there wasn't a thing there to remove, it was as clean as his hand; and so it proved. She has been a strong, healthy child ever since, whereas before she was delicate and subject to frequent spells of sickness.

There are eight in our family, and in these six years we have had many ailments overcome by Truth, sometimes quickly, sometimes more slowly, but always effectually, as follows: Pneumonia, typhoid fever, chills and fever, slow fever, headache, grip, ulcerated tooth, hemorrhoids, biliousness, croup, cough, severe burns, cuts, sprained ankle, badly mashed foot, falling hair, also the tobacco habit healed by reading *Science and Health*,—all have had their nothingness proved through Christian Science. We are daily striving to learn more of the truth that makes us free, and we realize that "where the Spirit of the Lord is, there is liberty." For these and many other blessings we are truly thankful.—M. B. LONGCOPE, Houston, Tex.

It is with great gratitude that I tell what Christian Science has done for us. This testimony relates to but one of the many beautiful demonstrations of the power of Truth we have had in our home. My son, while at work as a joiner, met with a severe accident. He understood a little of Christian Science, but not enough to demonstrate his freedom. He did not tell us of his trouble for several days, but on Sunday night he went to see a friend, and while there he was completely overcome by pain, and fainted. He was brought home and put to bed. He then asked for Christian Science treatment, but did not tell us what the trouble was; he just moaned that he was in terrible pain. This increased during the night; to sense he looked very ill, all action had ceased, his bowels seemed to be displaced, and other complications had set in. He could not rest anywhere; he was a most unnatural color, and could take no food—which resulted in great prostration. On Tuesday morning he tried

to get up, but found he could not stand, all the use (or life, as he said) had gone out of his legs. He fell to the floor, but remembered the "scientific statement of being" from Science and Health (p. 468), which helped him a great deal to demonstrate his own freedom. He lay on the floor and I treated him. He then managed to get his clothes on and came downstairs. He was asked why he did not stay in bed; and he said that if he did, he was sure he should die or go mad, as the pain was getting unbearable. His father (who has not yet accepted Christian Science) said he must have a doctor, but my son said he had been healed before by Christian Science treatment, and would go on with it. I felt that some definite step had to be taken, and I asked him to go out with me. He said, "How can I go for a walk, I cannot stand?" but I persuaded him, and we went, although he said the pains were like knives going into him. At that very moment, however, he felt that his bowels were replaced in their proper position, the pain was overcome and he walked quite a distance. When we got home he had some supper and rested better during the night, but still there was no action. I again treated him, and by one o'clock on Wednesday he went to his work,—perfectly healed,—every organ of the body working in perfect harmony and in accord with the law of divine Love.

In conclusion I should like to add my own healing. Two years ago I was enabled to demonstrate my own freedom from glasses which I had worn for twenty-seven years. I cannot express my gratitude to Mrs. Eddy in words for the light and understanding that Christian Science has given us, for it has proved to us God's ever-presence and help.

MRS. ELLEN WRIGHT, Manchester, England.

I have been healed of many things through a higher understanding of Truth. First, by reading the text-book, I was healed of the tobacco habit and chronic intestinal trouble which had claimed attention for twenty years or more. I was healed of profanity, and gained a greater degree of patience, more love for mankind, and a profound respect for the Bible. My experience since learning of Christian Science has been one of continual demonstration. Lately such marked proofs of God's care and power have come to us, that we dare not question. Our thought goes out in thanksgiving to our Father-Mother God, that we have been permitted to see the glory of His might and majesty, and that there was one who had such clear perception and holy desire as to bring this light to the world to-day.

F. C. HOTCHKISS, Bridgeport, Conn.

I wish to express in some measure my heartfelt thanks for the countless blessings that have come to me through Christian Science. Only recently I have passed through an experience which has meant more to me than any words can express. Though to mortal sense seriously ill, I was so strengthened, uplifted, and comforted by divine Love, that in looking back upon this experience, I can truly say that it was a happy one. No words can express my gratitude to God for this wonderful healing, and to our dear Leader, Mrs. Eddy, for the loving self-sacrifice which has made such healing possible to-day.

MRS. E. L. WOOLLEY, Waltham, Mass.

I crave the privilege of bearing testimony to the healing that is being effected in our day by Truth. The summer of 1903 found me a physical and mental wreck. I had been suffering for over four years from what is familiarly known as nervous prostration, severe nervous indigestion, besides a most agonizing pain in my side which had been differently diagnosed by four physicians, but which they had each failed to relieve. I had known of Christian Science in a vague way, but feared to try it as I thought its cures were effected by the use of hypnotic power, and I did not care to have any

person take mental control of me. However, my husband finally persuaded me to investigate it for myself, and I am deeply thankful that he did, for I soon found that it is God who governs in Christian Science, and we should certainly be glad to come under His government. My healing was not very quick, as there were many thoughts of self that had to be put out to make room for the divine Love that heals; but one by one they were destroyed, and the blessed peace that came in their stead can only be understood by those who have experienced it.

Our Father-Mother God is now our only help in every need, and we turn to Him, knowing that what we need of health, wealth, and happiness, we shall have, unless we do as did the children of Israel in the wilderness,—“Yea, they turned back and tempted God, and limited the Holy One of Israel.”—ISABEL VEILLER, New York, N. Y.

I desire to tell of the wonderful power of divine Love, revealed to me through Christian Science, and the change wrought out in my life by it. I was an invalid, and Christian Science made me well; I had catarrh of long standing and Christian Science healed me; I was in despair and Christian Science lifted me up; I was ignorant and Christian Science is making me wise toward God; I was blind to the all-sufficing beauty of a life hid with Christ in God, and Christian Science has made me to see. The relief from physical suffering was wonderful, but beyond that I prize Christian Science because the Bible is become the “Book Beautiful” to me and I am filled with an intense desire to make my life conform to its teachings.

For all this I am deeply grateful to God, and I love and honor Mrs. Eddy, for as I grow in understanding I recognize more and more the purity and goodness of a life that God could use to such a great end.

MRS. KLARA WOOLLEY, Salina, Kan.

I have been a student of Christian Science for over four years, and during that time have had many loving assurances of God's ever-presence.

I had been depending on glasses for several years, and when I read the testimony of a lady who had laid aside her glasses and trusted to Truth, although she could at first only read the headlines in her daily paper, I immediately put mine away, and have never used them since. At first I read the daily Lesson from a large family Bible, but soon I realized that I should depend on Principle, so I took my Bible with very small print again. Sometimes, before I could read the Lesson, I have sat for half an hour, realizing the source of all light, and that no matter how error seemed to hold sway, the light was there. From the very first I could read Science and Health, the *Sentinel*, and *Journal* without any trouble. Now I want to proclaim from the housetop that “The Lord is good!” While holding to the truth day by day, several other ailments have been overcome, so if it was not an immediate demonstration I may have gained more understanding of the truth by having to work constantly. Many suggestions of error would come to tempt me,—one the thought that it is natural for mankind to need glasses at such an age, and that this was more difficult to overcome than an affliction of the eyes. I, however, would put them aside, knowing it was a man-made law, which was annulled by the law of God.

I want to thank Mrs. Eddy for Science and Health and its great help in rightly understanding God's Word.

GENA A. SELBERG, Orange, Cal.

I wish to thank God for the many blessings I have received during the last seven years. I also wish to thank our beloved Leader, Mrs. Eddy, for her untiring devotion and unselfish labor in working so faithfully for mankind. I,

for one, seemed to be in Egyptian darkness, and Christian Science came to me as a beacon-light, and it has led me out of much of the bondage of material sense, mental, moral, and physical, and I know that the understanding of Christian Science has made me a better wife and mother; it has completely changed my character and disposition. Formerly I cared for nothing but self; now I am striving to put self out, and to let divine Love govern me instead. I find that only by strictly adhering to the rules given in our textbook, can this be done. Science and Health has indeed opened to me the Bible, and its pages have been illumined as never before. It has been my blessed privilege to voice this truth to many weary ones, during several weeks of travel, and in some places it is already bearing fruit.

The first literature of Christian Science which I ever read was a *Journal*, and I believe not one word of it escaped my eye. I knew I had found the truth, and almost immediately my whole mentality was changed. I told my husband this was what I had been desiring for years. I read of the remarkable cases of healing, and not once did a doubt come as to their correctness. A few days afterward, I was the happy possessor of the "little book," and its reading brought me such health and happiness as I had never dreamed would be mine in this world. For this, and for very much more, I am deeply grateful to God.

CORA L. SCHWEIGART, Tacoma, Wash.

I feel it is time for me to acknowledge the many blessings I have received through Christian Science,—what it has done for myself and family. My oldest son had hip-disease; he could not lie down and sleep, but would stand up beside the bed, or lie on his stomach, which was the only way he could sleep without pain. I took him to a Christian Science practitioner, and from that time on he has been able to lie down to sleep. About six years ago an abscess gathered and burst, and every one said it would never heal, or that it would open again. It did heal in a few weeks, and has never troubled him since. My other son had stomach trouble, with severe bloating. I took him to a doctor, who gave him medicine, but the trouble continued until I took him to the practitioner, and now he can eat as much as he wants. My daughter had a case of diphtheria, and she was healed in a week. I was afraid to take her out, but the Scientist said, "There is no fear in love," and she did not suffer. My husband had been suffering from stomach and heart trouble for two years. He tried Christian Science, but did not get well as soon as he expected, and went to see a doctor. He was not cured, so he went back to Science and now he has no more trouble. I am grateful for a healing of quinsy. A boil would gather in my throat every winter, but since I went to see the Christian Scientist I have never had it,—that is, for the last eight years. I also suffered with rheumatism, and that is all gone, with many other ailments. I study the book, *Science and Health* by Mrs. Eddy, and I am very thankful to God, and to her, for what the truth has done for us.

MRS. L. BORGMAN, Cincinnati, O.

Having been three times at death's door, I was left a semi-invalid for some years, and then I turned to Christian Science for help. By it I have been healed of ailments whose name was legion, among which was one that two of Boston's best surgeons said would make me a cripple for life, and another that the doctors said was incurable. Science and Health became my daily companion, and it grows more precious as time goes on. After studying it for two years, or a little more, I suddenly discovered that a deformity which I had carried from childhood had vanished, though not a thought of such a possibility had ever occurred to me before. Since then I have seen all manner of evils destroyed by the application of the law of divine Love. There is, however, greater cause for rejoicing in the spiritual up-

lifting than in the physical healing, for which we are very grateful.

Words are inadequate to express my gratitude to God, and to our beloved Leader, Mrs. Eddy, through whose noble work we are led to perceive our rightful inheritance, which is incorruptible, undefiled, and fadeth not away.

ABBIE W. GRIFFIN, Boston, Mass.

It is with a deep sense of gratitude that I acknowledge the protecting power of divine Love in a case of automobile accident. Nothing but the power of God, good, could ever have saved us, for the machine rushed without control down a long and steep hill and was finally overturned. My earnest desire is that this gratitude may ripen into more unselfish love, into helpfulness to others; and that I may follow steadfastly the clear light of Truth revealed to us to-day through our dear Leader, Mrs. Eddy.

FLORENCE D. BARTLETT, Chicago, Ill.

My heart is filled with gratitude to God for the many blessings I have received through Christian Science. For many years I was in darkness and despair, but to-day I am free physically and mentally. In less than nine months I have been lifted out of the mire into the glorious liberty of a child of God. The many physical ills to which I have been subject for years have disappeared, and the happiness which comes with the knowledge that God is all, can be realized only by those who have experienced the spiritual uplifting which Christian Science brings. I am grateful for the many demonstrations made in our family, but particularly for the healing of my little daughter, who has had kidney trouble for six years in an aggravated form, and which *materia medica* failed even to help. I feel deeply grateful to divine Love for sustaining our beloved Leader through many trials.

MARY BROUGHTON BELL, Pittsburg, Pa.

Seven years ago I was healed, and bought a copy of *Science and Health*, but after reading the book through and finding so much in it that I did not understand, and as the nearest Scientist was twenty miles away, I did not pay much attention to it for nearly two years. For five years, however, there has been no medicine in our house and we have had splendid health. There have been times when I should have had help, if a practitioner had been near, but when I seemingly could do no more, then God did the rest for me, and this has taught me that I can, of myself, do nothing. My children, myself, and another lady, meet every Sunday to study the Lesson-Sermon.

It would be impossible to tell of all that Christian Science has done for me and mine, or to thank Mrs. Eddy enough. We are thankful for the periodicals and for the good thoughts that we get from other Scientists when it is our privilege to meet them. Money could not buy my copy of *Science and Health* if I could not get another, although we thought the money was thrown away when I first took treatment and paid for my book, but we have saved a great many times that amount since, through the understanding which we have gained.

MRS. JENNIE THOMAS, Macksburg, Ia.

A crowd of troubles passed him by,
As he with courage waited;
Said he, "Where do you troubles fly,
When you are thus belated?"

"We go," said they, "to those who mope,
Who look on life rejected,
Who weakly say good-by to hope,—
We go where we're expected."

ANON.

From our Exchanges.

There is no controversy among reputable and conscientious men and women, whether inside or outside of the Church, as to the binding obligation of righteousness. No man is absolved from any part of the moral law by the need of making money. He who buys a voter, corrupts a legislature, lies to a customer, cheats a railroad corporation, adulterates his goods, makes false returns of taxable property, steals public lands or public privileges, or does any of those things which, reduced to their lowest terms, can be described as perjury and ordinary lying, stealing, concealed defalcation, robbery, or spoliation of the property of other men, is an enemy to the public. There is no difference of opinion as to the moral quality of such transactions, but there are wide differences among the wise and good as to the methods by which such sins shall be rebuked and virtue encouraged. One thing seems to us certain: Sin does not seem to be sinful until its opposing virtue appears in the world. The terrors of the law and the shamefulness of sin have their part and do their work; but nothing makes evil-doing so grotesque, absurd, and useless as does a fine exhibition of probity and honor set over against it.—*The Christian Register*.

Religion in the Bible is human souls dominated by the Spirit, throbbing and pulsating with the same divine energy which holds the world to its work. This will seem entirely inadequate to those who insist on what they call clear thinking, just as Paul's assertion that the kingdom of God is not in words but in power, must have seemed entirely unsatisfactory to the legalists who listened to him. Still the open secret is that the power of the Book is this manifoldness of the consciousness of a living God, and a trusting to His spirit when it spoke. It was this constant experience of God, this living in Him and His purposes, this infinite variety of contact with the source of life, that makes the whole Book echo with one vast cry of "Immanuel, God with us." Here is the inspiration of that ultimate optimism which forever stretches like a vision beyond the evil of the present as it lies heavily on the souls of those who bear the burden of the world's sins on their hands. Perhaps some day the world will discover the divine fact, that the Biblical consciousness of God, which is so broad, so vital, and so infinite in the variety of its expression in experience that it transcends definition and escapes human limitations, is the true source of an everlasting confidence, and that we shall never exhaust the fountain from whence the world draws its supplies of faith.—*The Universalist Leader*.

What to-day America needs, and what we believe American congregations really desire, is neither poetry nor philosophy, neither entertainingly fresh interpretations of Scripture nor polemical criticism, nor defence of theologies, old or new, but just such messages as it is beginning to get from lay preachers: the duty and the beauty of common honesty, common purity, common humanity, and the power in the living God to enable common men to realize this beauty and fulfil this duty, despite all the glamour and glitter of false ideals and all the pressure of a commercial age and an ill-educated public conscience.—*The Outlook*.

President Butler of Columbia University, in a recent address said, "Little by little the moral and intellectual squalor of the mere struggle for gain, and the suffocating atmosphere of a life spent in juggling with huge sums of money, are being made evident to our people. And when the light one day breaks, men and women will put money and the power that it brings in the subordinate place that belongs to them, and will exalt the high, noble, and sufficient uses of money in the relief of suffering."

It is not what you believe of the Holy Spirit, but what you receive, that makes the difference, says *The American Friend*.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

THE NEW CONCORDANCE.—A complete Concordance to Science and Health with Key to the Scriptures. This work has been compiled from the late revised edition of *SCIENCE AND HEALTH*, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in *SCIENCE AND HEALTH*. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, \$5. Twelve or more to one address, \$4.50 each.

CHURCH MANUAL.—Containing the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. This does not include the list of members. Price, prepaid, \$1 per copy; \$5 per half dozen; \$9 per dozen.

Address all orders for books named above to JOSEPH ARMSTRONG, 250 Huntington Avenue, Boston, Mass.

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.D., 239 Huntington Avenue, Room 8, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

A Word from Mr. Chase.

Per capita taxes, contributions to The Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of The Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to The Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number, or number of post-office box.

STEPHEN A. CHASE, Treasurer.
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE JOURNAL

FOUNDED IN APRIL, 1883, BY THE AUTHOR OF "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," REV. MARY BAKER G. EDDY, DISCOVERER AND FOUNDER OF CHRISTIAN SCIENCE

This monthly Magazine is the official organ of The First Church of Christ, Scientist, in Boston, Massachusetts, and correctly represents the Christian Science movement.

It contains interesting discussions of the teaching and the practice of Christian Science, and in addition to dissertations, lectures, and contributed articles, publishes always a number of reports from cases of spiritual and physical healing, which practically illustrate the redemptive work of Christian Science.

Terms of Subscription: Payable in advance, postage free, to any part of the United States, Canada, or Mexico, Two Dollars per annum. One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscription, \$2.40 per annum; \$1.20 for six months.

The Christian Science Quarterly

Published January, April, July, and October

Contains the Lesson-Sermons which are read at the Sunday Services throughout the year in all the Christian Science Churches. These lessons, which present citations from the Bible and "Science and Health with Key to the Scriptures," are valuable for daily study.

Terms of Subscription: For one year, 50 cents; fifty copies or more to one address, 50 cents yearly for each copy. Foreign subscriptions, 60 cents. Yearly subscriptions only are received.

Terms of Sale: One or more copies, postage paid, each, 15 cents; fifty copies or more to one address, each, 12½ cents, postage paid.

Der Herold der Christian Science

PUBLISHED MONTHLY

A magazine printed in German, which publishes original and translated articles bearing upon Christian Science, and also testimonies of healing from Germany and America. It contains about thirty-eight pages of such reading matter, and is valuable as an authorized representative of the movement, also the Lesson-Sermons which are read at the Sunday services in all the Christian Science churches.

Subscription Price: For the United States, Canada, and Mexico, \$1.00 in advance; all other countries, \$1.25. Single copies, 10 cents, postpaid.
